DO IT NOW.

All we have is just this minute

Do It Now.

Find your duty and begin it

Do It Now.

Surely you're not always going

To be "a going to be," and knowing

You must sometime make a showing.

Do It Now.

SURE.

Stick to your work, forget the mob

Avoid the discontented throng;

For, if you're always on the job

Success is sure to come along.

Editorial Comment

The building outlook throughout the coun-
try continues good despite a rise, here and
there, in the cost of materials.

Reports to "Bradstreet's Journal" from
107 cities of the United States show 18,721
permits filed during March, with an estimated
value of building planned or permitted for
of \$68,181,668, a decrease of 12.5 per cent.
in permits, but a gain of 14.1 per cent. in
value as compared with March a year ago.
The returns are irregular, as shown by the
fact that every group of cities shows a de-
crease in permits, while all but two groups
show gains in estimated expenditure. In the
detailed list by cities, too, it is found that
fifty-six cities show gains, while fifty-one
show decreases from March a year ago.

For the first quarter of 1916 expenditures
aggregate \$177,600,265, a gain of 18.2 per
cent. over the first quarter of 1915, which
showed a loss of 11.2 per cent. from 1914.
The detailed returns, by groups, show the
following:

	No. of Cities.	No. of Permits, 1916.	Values, 1916.
New England..	16	874	\$3,329,111
Middle	23	4,293	25,524,951
Western	16	4,952	12,077,646
Northwest	14	2,956	17,379,006
Southwest	8	1,186	2,269,054
Southern	19	2,160	4,576,863
Far Western...	11	2,300	3,024,947
Total	107	18,721	\$68,181,668

* * *

The decrease shown in the returns from
Philadelphia need occasion no alarm. There
is pending in the offices of local architects
enough important work involving large fig-
ures to more than counterbalance the slight
falling-off here noted—a decrease due to
weather rather than to economic conditions.

* * *

Speaking on this subject of talk of increas-
ed building costs, "The New York Record
and Guide" expresses the common-sense view
in an entertaining review of the fluctuation
in the line covering a period of years. Refer-
ence to these facts goes far to dissipate any
misgivings that may have been entertained
regarding the possibility of building costs be-
coming prohibitive.

"Critics of the present building situation
undoubtedly place too much emphasis upon
the recent rise in the cost of some materials,
and give too little consideration to factors
which, if less obvious to the public, are of
greater moment. Commodities naturally cost
more in busy times than when business enter-
prise is panic stricken. The really serious
portents in the present situation are the grow-
ing difficulty of getting deliveries for certain
primary materials, the apparent shortage of

common labor and the larger wages being
demanded by the skilled trades at every op-
portunity.

"As for building costs as a whole, a little
figuring will disclose to an analytical mind
that they have not yet risen higher than in
former busy periods. In 1902 the official
quotations on structural steel were as high
as they are to-day, and the premiums paid
for prompt deliveries a great deal more.
Portland cement was then selling in car lots
to dealers at \$2 to \$2.25, f. o. b., New York.
In 1906 Hudson River brick, now quoted at
\$8 to \$8.25 for the best grades, was selling in
cargo lots to dealers at the wharf for \$11.25
per M. In that same year, 1906, a very thor-
ough investigation of building construction
costs by the 'Record and Guide,' in collabor-
ation with the office of Ernest Flagg, disclos-
ed a general advance of 33 1-3 per cent. over
the costs prevailing in the year 1898, the
year of the Spanish war.

* * *

"In 1908, the year following the panic,
when building costs had again fallen as far
as they could go, a second inquiry into the
subject by the 'Record and Guide' was based
upon three elements: (1) material prices,
(2) workmen's wages, and (3) contractors'
profits. And it was found that office build-
ings could then be produced for 15 per cent.
less than in the year 1906; apartment houses
for 10 to 15 per cent. less; high class resi-
dences, 18 to 20 per cent. less; warehouses
and factories, 18 to 20 per cent. less; sub-
urban dwellings, 10 to 12 per cent. less. and
concrete buildings, at least 15 per cent. less
than in the best building year the city ever
knew.

"An office building actually under con-
struction in 1908 cost only 28 cents per cubic
foot, when two years before the same build-
ing would have cost to erect 32 cents per
cubic foot, or 14.3 per cent. more. A resi-
dence on Park avenue, near Eighty-sixth
street, cost to build in 1906 \$105,000, or 38
cents a cubic foot. Two years later it could
have been duplicated for 33 cents a cubic
foot. A fireproof factory of ordinary rough
construction was completed in Jersey City
in 1908 at a cost of 9 cents per cubic foot,
exclusive of lighting and heating. Had it
been contracted for in 1906 it would have
cost 15 cents per cubic foot, or 77 per cent.
more. The cargo price of common brick in
1908 was but \$5 per M. Hemlock had reced-
ed from \$22, base price, to \$19. Cement had
dropped 12 per cent., and stonework (includ-
ing material and labor) 20 per cent.

"Eight years have passed since building
costs started to rise from their previous low
level. With the possible exception of steel
and rough lumber none of the fundamental
materials has yet reached its former maxi-

mum price. Interior woodwork, stonework, marblework, brickwork and most of the operations in building construction can still be done for less than at some previous active epoch.

"By far the larger total cost of the materials entering into the construction of a first-class building are chargeable to steel, and for this war conditions are responsible. And if war conditions are to be blamed for the high price of steel products, they must at the same time be credited with having been one of the principal causes of the business revival."

* * *

Here we have Emerson's old theory of the law of compensation once more vindicated. Considering that as a result of the war structural steel costs more money, we have the compensating condition that general prosperity due to the same war is directly chargeable with a business revival of sensational proportions.

Recent observers are of the opinion that 1916 as a whole will go down into history as one of the greatest building years the United States has ever known, due to the springing up of new industries concerned with providing munitions and other war materials and to the nation-wide business prosperity incident thereto.

* * *

Following are the values of buildings permitted for in March and the first quarter of 1916, as compared with like periods of recently preceding years back to -909:

	March.	Three Months.
1916.....	\$83,756,728	\$193,175,325
1915.....	72,475,692	162,995,673
1914.....	85,795,424	187,916,992
1913.....	83,388,638	201,688,616
1912.....	79,409,845	179,596,164
1911.....	80,470,184	171,868,315
1910.....	89,425,797	186,381,001
1909.....	86,231,009	193,825,989

Compared with March a year ago, building expenditures show a gain of 15.5 per cent. Compared with the same month of three preceding years, gains are likewise shown, and for the first three months of 1916, a gain of 18.5 per cent. is shown, and only one year of the last seven shows a larger total.

* * *

Who built the first skyscraper?

The New York "Sun" awarded the honor of pioneership in this regard, in a recent number, to D. H. King, Jr.

Thomas S. Chard, of Atlantic City, taking issue with the "Sun," awards the credit to Major W. L. B. Jenney.

Mr. Chard's letter is so interesting a contribution to the controversy under this head that we are moved to give it space.

"To the Editor of 'The Sun'—Sir: In 'The Sun' of April 21 you pay tribute to the memory of D. H. King, Jr., whom you call 'the pioneer in skyscraper construction.' I have never seen stated in print the origin of the so-called skyscraper, and it may interest your readers to know about it.

"In the year 1888, wishing to construct a

residence in Chicago, I employed as architect Major W. L. B. Jenney. I had known him for some years. He was an able and very modest man, and it was he who designed and built the first building embodying the principles of the modern skyscraper. He told me the story, and here it is:

"He said that he had long had the idea that it would be possible to build such buildings, and he had toiled hard to draw some feasible plan. But then, he said, 'I thought such construction would not be practicable, for the expansion and contraction by reason of heat and cold in our climate would shake the windows into the street. But still I could not abandon the idea. One night after I had spent the evening in studying the subject, the whole plan came to me in a dream.

"I awoke, made notations on paper and the next day studied the matter carefully in my office, and was satisfied that I had solved the problem."

"He then conferred with his friend and former associate in the army, General A. C. Ducat, who had once been a civil engineer, but was then one of the Western managers in Chicago of the Home Insurance Company of New York. General Ducat informed Major Jenney that the company was about to construct a building in Chicago for its Western department. The directors of the Home Insurance Company, he said, were soon to visit Chicago to consider the matter on the ground, and he promised to introduce Major Jenney to them when they arrived. General Ducat then took the Jenney plans and gave them careful study.

"Major Jenney met the directors as arranged and submitted his plans. Charles J. Martin was then president of the Home Company and demurred to the investment of hundreds of thousands of dollars in a 'mere experiment,' but General Ducat was warm in his advocacy and the plans were adopted. The Home Insurance building was the first ever constructed on the lines followed by the skyscrapers of the present day. The Home building was not of great height, but it demonstrated the practicability of the plans, and its construction was quickly followed by that of the Tacoma and other buildings of great height.

"To Major W. L. B. Jenney is due the honor of originating the plans which have revolutionized the architecture of our modern cities.

"I hope that some day Chicago will erect a suitable monument to the memory of Major Jenney and that elsewhere due honor may be done to his name."

* * *

Are there any other nominations for the honor?

Who built the first Philadelphia skyscraper?

Does any of our readers happen to know?

Philadelphia is one of the busiest building centers in the United States and "The Guide" is the only medium that touches this golden field.

CAREY BUILDING MATERIALS.

"Architects' Specifications for Carey Building Materials" is the title of a most attractively arranged and elegantly printed booklet issued for the convenience of members of the architectural profession by The Philip Carey Company, of Lockland, Cincinnati, with branches in all the principal cities. Carey Flexible Cement Roofing, Carey Asbestos Built-Up Roofing, Carey Asphalt-Slate Shingles, Carey Ceil Board, Carey Rubber Roofings, the Carey Elastic, Expansion Joint, Carey Fibreweave Insulating Paper and Damp-proofing Perceproof Compound, and the Carey Magnesia and Asbestos Insulating Products are a few of the many specialties manufactured by the Carey concern covered in this very interesting booklet. No architect, roofer or builder can afford to miss a chance to peruse this valuable hand-book of the Carey products, which will be sent on request to any of our readers who mention "The Builders' Guide." Address the Carey Company headquarters at Lockland, Cincinnati, or drop a card to any of the many branch offices throughout the country.

"KNOCKING" THE ARCHITECTS.

Strange as it may seem, the architect very often forgets that the working drawings are made for the contractors and material men, and are not simply a display of draughtsmanship. The limit was reached last week by a well-known architect sending out a set of plans with the explanatory lettering so small that it could not be read without the aid of a strong magnifying glass. It was a strange sight, indeed, to see the sub-contractors looking through magnifying glasses. It is indeed very fortunate for both the client and the contractor that such absurdities are practiced by only a few of the profession. In addition to a few guesses thrown in, it is reasonable to expect the top price plus from every "sub," and when added to the hazardous risk of the general contractor, a small house grows into the price of a mansion.

If the architects who continue to turn out working drawings that should be accompanied by an interpreter would only take a week off to visit contractors' offices, they would see, to their edification, that the plans which receive the most attention and consequently the best bids are those that are plain and easily understood by the "sub."—"Public Ledger."

WOOD FOR EXTERIORS COMING INTO FAVOR.

Whether or not wood will give lasting service in exterior use depends chiefly on its selection and protection. If the proper grade is chosen and occasional painting is resorted to, the durability of wood is indisputable.

There should be no objection to the use of wood in preference to mineral materials, as wood is far more beautiful, adaptable and economical. Moreover, wood permits the owner to give better expression to his personal whims or fancies, and he can repaint as often as he feels disposed.

Perhaps it is because of these facts that wood is again coming into popular favor for exterior construction. In the recent revival of the use of wood for this purpose perhaps no species has figured so prominently as North Carolina pine. Its constant use in modern country estates, new suburban dwellings and farm homes and buildings lends emphasis to its ready adaptability. Its abundance means not only low cost, but a readily available supply for home-builders throughout this section.

Trade News and Gossip

Cullings from the Week's News with a Special Interest for Men Engaged in the Structural Industries—What is Happening in Trade and Architectural Circles.

**Among the coming conventions in which readers are interested are the following:

Stove Founders' National Defense Association will hold convention in New York City May 9.

National Association of Stove Manufacturers will hold convention in New York City May 10 and 11.

National Warm Air Heating and Ventilating Association will hold its annual convention on June 14 at Detroit, Mich.

National Association of Sheet Metal Contractors, annual convention, Peoria, Ill., June 20, 21, 22 and 23.

**At the meeting held during the period of the Cement Show in Chicago, Ill., the National Association of Mixer Manufacturers elected the following officials to serve for the ensuing year: President, A. Cameron; vice-president, William A. Hart; secretary, H. E. Smith; treasurer, F. C. Wilcox. H. M. Capron was elected a member of the Executive Committee.

**At the recent convention of the National Association of Brick Manufacturers the following officers for the ensuing year were elected: President, C. J. Deckman, of Cleveland; first vice-president, Fritz Salmen, of New Orleans; second vice-president, George H. Clippert, of Detroit; third vice-president, J. W. Robert, of Clinton, Ind.; secretary, T. A. Randall, of Indianapolis; treasurer, J. W. Siblay, of Birmingham. It is interesting to note in this connection that Secretary Randall was elected for the thirtieth successive term.

**R. S. Conant, architect, has moved his offices from 14 Geddes street, to 159 Warburton avenue, Yonkers, N. Y.

**Christian Bauer, Jr., architect, 861 Manhattan avenue, Brooklyn, desires literature pertaining to coal conveyors.

**A local association of the National Association of Sheet Metal Contractors was organized at Norristown, Pa., on March 28. National Secretary Edwin L. Seabrook addressed the meeting, pointing out the advantages to be derived by the co-operative effort of an association. The secretary also made a most interesting talk on the cost of doing business, aided by charts which he has used in several recent talks he has given before other local associations.

**The National Fire Protection Association will hold its annual meeting in the auditorium of the Insurance Exchange, Chicago, Ill., May 9-11. The program for this meeting will be announced in a later issue of this paper.

**The Richmond Radiator Company, of New York, has opened a new warehouse at American and Dauphin streets, Philadelphia, Pa.

**Louis N. Millman, architect, will move his offices about May 1, from the Stoll Building to the Pioneer Building, Troy, N. Y.

**The National Electrical Contractors' Association of the United States will hold its annual convention at the Hotel McAlpin, New York, July 18, 22. Secretary, G. W. Duffield, 41 Martin Building, Utica, N. Y.

**The National Association of Master Plumbers will hold its annual convention at Atlantic City, N. J., June 22-23. The headquarters will be at the Hotel Breakers. The program for this convention will be announced later.

**The New Jersey Master Plumbers' Association will hold its annual convention at Columbus Institute Hall, Newark, N. J., May 22-24, inclusive. Plans are under way for an interesting exhibition of plumbing fixtures and appliances to be held in connection with the convention.

**Harold L. Alt, heating and ventilating engineer, formerly connected with R. D. Kimball Co., has become associated with Westinghouse, Church, Kerr & Co., 37 Wall street, New York, where he will have charge of the design of plumbing work.

**Herman N. Lubet, architect and engineer, has recently returned to this city from an extended trip to California, where he has been recuperating from a serious illness. He has resumed the practice of his profession at 1271 Park place, Brooklyn.

**F. H. Shaw, consulting engineer of Lancaster, Pa., has opened a New York office in the Woolworth Building, where he is prepared to practice in all branches of civil engineering, including the design and construction of water, gas, sewerage, railway and hydro-electric installations.

**The American Museum of Safety has changed the date of the third National Exposition of Sanitation and Safety from the week of April 17 to the week of May 22. The exposition will be held in the Grand Central Palace and will be open from Monday, May 22, until Saturday, May 27.

**The Master Builders' Association of New Jersey has been reorganized and has established permanent quarters in the Essex Building, Newark, N. J. The office contains a bureau of general information, bureau of labor and statistics, legislative bureau, legal department, collection bureau, transportation bureau, insurance department and accident

LABEL YOUR WORK

Signs 2 x 3 ft., 12c. Each

C There is nothing more dignified or elegant than our large Weatherproof Fiber Cardboard Signs. Easy to carry, quick to place, not greasy, more serviceable than wood or iron, impervious to all weather conditions and cost from 8 to 20 cents apiece—in lots of one hundred.

INDEPENDENT PRINTING COMPANIES OF U. S. - Washington, D. C.

prevention bureau. J. H. Scharff, the general manager, is a specialist in co-operative work and has had 25 years' experience along those lines. The officers of the association are: J. S. Anderson, president; A. J. Crowder, treasurer; V. P. Christofferson, secretary, and the following vice-presidents: W. W. Schouler, Newark; H. A. Rath, Elizabeth; A. D. Freiberg, New Brunswick; eGorge Collins, Hackensack; Jacob Englishman, Paterson; H. Moosbrugger, Somerville. The Advisory Committee numbers fifty members. It is felt that the steps now being taken will result in a manifold increase in the benefits which result from membership in the association.

**The National Housing Association will hold the next housing conference at Providence, R. I., October 9-10-11, 1916.

**The National Pipe and Supplies Association will hold its annual meeting at the William Penn Hotel, Pittsburgh, Pa., May 8-9.

**The National District Heating Association will hold its eighth annual convention at the Hotel Martinique, New York City, May 16-19.

**The American Waterworks Association will hold its thirty-sixth annual convention at the Hotel Astor, June 5-9. An excellent program of papers has been prepared.

UNCLE SAM CUTS COST OF BLUE-PRINT CHEMICAL.

Announcement has been made by the U. S. Department of Agriculture of the new method for producing the chemical coating material for blue-print paper. The technical name of this is potassium-ferri-cyanide or red prussiate of potash. Before the beginning of the war, this chemical could be obtained for 55 cents a pound. It now sells at about \$6.00 a pound, and is very hard to get even at that price. This new method developed by the Agricultural Department chemists reduces the cost under present market conditions to about \$2.80 a pound, and in normal times to about 35 cents a pound.

The apparatus is simple, as is also the manufacturing process.

The present high price of blue-print paper is considerable of a hardship on architectural and engineering departments. No doubt many will want to look into this new method of production. The Office of Information, U. S. Department of Agriculture, Washington, D. C., will supply full particulars.

WINDOW BOXES.

The windows may be made beautiful in city homes by preparing window boxes—plain wooden boxes, nine inches deep, twelve inches wide and of proper length to fit the window. Inch holes should be bored through the bottom, and small pieces of charcoal and broken pots placed in the bottom to insure proper drainage, which is very important. Fill with sifted soil, one-third sand, two-thirds top soil from the garden.

Send to the seedsmen for catalogs and make selections. I have combined, with great success, for southern exposure various verbenas, raised from seed and transplanted into the window boxes, heliotrope combined with varieties of geraniums—scarlet, cardinal, salmon pink and white. The dwarf maurandias make pretty vines.

For the northern windows use trailing fuchsia, ivy geraniums, begonia, Japanese morning glory and Asparagus sprengeri.

During the summer take slips from the choicest specimens and keep the new plants over winter for next season's use. At the end of the season remove the plants, refill the box with new soil and plant Dutch flowering bulbs, hyacinths, narcissi, etc. Place in cool, dark place for a few weeks and then bring them out into the light and heat gradually. With a little care the flowers will be ready for Easter.—New York "Sun."

HOLLOW METAL DOORS.

The effort to standardize hollow metal doors will, if successful, tend to increase the scope of this type of door, and permit of its more general use in buildings. Practically every architect and builder recognizes the value of hollow metal doors and trim, and, while they might desire to make use of this kind of construction in their buildings, they were prevented by the excessive cost involved. This high cost has been the result of conditions, which the manufacturers claim are unnecessary. They were imposed by reason of the fact that the products were not standardized and therefore their manufacture was an expensive process, on account of the wasteful and inefficient methods of operation, in both design and production.

For these conditions the manufacturers are not wholly to blame. The waste starts with an unstandardized demand, and grows with special details such as designing, estimating, the maintenance of rafting departments, all to meet the requirements which might be greatly reduced or eliminated.

That the present high cost of a hollow steel door of the best quality is not in the materials is apparent, when it is considered that in the average 3x7 feet door there is less than 100 pounds of furniture steel. This material costs about \$3.40 per 100 pounds. Add to this the strap steel for swing and lock reinforcement, asbestos panel boards, cork strips, finishing enamels, etc., the raw materials are obtainable at a comparatively small cost.

Hollow steel doors should be made at a low cost, and sold at a fair price. By co-ordinated effort, definite standards, and efficient production, better doors should be produced for less money.—New York "Real Estate Record."

HOMES WILL COST MORE.

Brooklyn Builder Says the Advance Will Be 20 Per Cent.

The price of homes in Brooklyn will take a big jump in the next few months, according to Otto Singer, who has put up many homes in Kings. He claims that the advance in labor and material has increased the cost of building at least 20 per cent., and says that after June 1 there will be very few new modern houses for sale at present prices.

This condition has caused many builders to abandon proposed operations, in some instances where plans have been filed and work actually started. This will create a greater demand for the comparatively few houses which will be erected this summer.

"Homeseekers seem to be awake to this condition," Mr. Singer said. "as evidenced by the numerous sales reported during the past few weeks, especially along the line of the new Fourth avenue, Seabeach subway."

LUCKY HE DID NOT PUT IN A NEW FURNACE.

He was renting a small house which the landlord had refused to repair. One day the owner came to see him.

"Jones," he said, "I shall have to raise your rent."

"What for?" asked Jones, anxiously. Have the taxes gone up?"

"No," the landlord answered, "but I see you've painted the house and put in a new bath room. That, of course, makes it worth more."

Learn to advertise. If you feel unequal to the task of preparing the kind of copy you ought to have, let us prepare it for you. Advertising is our business. A New Model Typewriter!

The **OLIVER** No. 9
The Standard Visible Writer

BUY IT NOW!

YES, THE CROWNING TYPEWRITER TRIUMPH IS HERE!

It is just out—and comes years before experts expected it. For makers have striven a life-time to attain this ideal machine. And Oliver has won again, as we scored when we gave the world its first visible writing.

There is truly no other typewriter on earth like this new Oliver "9." Think of touch so light that the tread of a kitten will run the keys!

CAUTION!

The new-day advances that come alone on this machine are all controlled by Oliver. Even our own previous models—famous in their day—never had the Optional Duplex Shift.

It puts the whole control of 84 letters and characters in the little fingers of the right and left hands. And it lets you write them all with only 28 keys, the least to operate of any standard typewriter made.

Thus writers of all other machines can immediately run the Oliver Number "9" with more speed and greater ease.

WARNING!

This brilliant new Oliver comes at the old-time price. It costs no more than lesser makes—now out-of-date when compared with this discovery.

For while the Oliver's splendid new features are costly—we have equalized the added expense to us by simplifying construction.

Resolve right now to see this great achievement before you spend a dollar for any typewriter. If you are using some other make you will want to see how much more this one does.

If you are using an Oliver, it naturally follows that you want the finest model.

17 CENTS A DAY! Remember this brand-new Oliver "9" is the greatest value ever given in a typewriter. It has all our previous special inventions—visible writing, automatic spacer, 6½-ounce touch—plus the Optional Duplex Shift, Selective Color Attachment and all these other new-day features.

Yet we have decided to sell it to everyone everywhere on our famous payment plan—17 cents a day! Now every user can easily afford to have the world's crack visible writer, with the famous PRINTYPE, that writes like print, included FREE if desired.

TODAY—Write for Full Details and be among the first to know about this marvel of writing machines. See why typists, employers, and individuals everywhere are flocking to the Oliver. Just mail a postal at once. No obligation. It's a pleasure for us to tell you about it.

THE OLIVER TYPEWRITER CO.

Corner Walnut and 10th Streets, Philadelphia, Pa.

YOU CAN RENT AN OLIVER TYPEWRITER 3 MONTHS FOR \$4.00.

The Standard Documents of the American Institute of Architects

The New Contract Documents of the American Institute of Architects are now on sale and replace the old Uniform Contract, which is to be discontinued

PRICES FOR SINGLE COPIES

Agreement and General Conditions in cover	\$.10
Bond of Suretyship	.02
Form of Subcontract	.02
Letter of Acceptance of Subcontractor's Proposal	.01
Complete set in cover	.15

Trial set delivered upon receipt of nine 2-cent stamps.

These Documents have received the full approval of the Institute, through its Convention, Board of Directors and Officers. They are the outcome of nine years of continuous work by a Standing Committee on Contracts and Specifications. This Committee, comprising some of the ablest American architects, was assisted by the Institute's forty Chapters; advised by eminent legal specialists in contract law and aided by representatives of the Building Trade Associations of the United States. The forms have been officially approved by the National Association of Builders' Exchanges, the National Association of Master Plumbers, and the National Association of Steam and Hot Water Fitters.

STERLING CONVERTIBLE BUILDERS' LEVEL

DESIGNED AND MADE BY

WARREN-KNIGHT CO., 136 N. 12th St., Philadelphia

All makes Transits and Levels Repaired, Bought, Sold and Exchanged

W. Anstine & Co. (C), 1218 Filbert street. Cost, \$2,000. Store and dwelling, new flooring, etc., Fifth and Erie avenue.

Simon Korenbleth (O), 4915 Woodland avenue. Le Roy K. Smith (C), Forty-first and Chester avenue. Cost, \$500. Store and dwelling, brick, 1 story, Forty-first and Chester avenue.

Eman Baptist Church (O), 234 Coulter st. J. F. Trest (C), 2041 Market street. Cost, \$1,000. Laundry building, fire repairs, 224-26 Coulter street.

Mrs. C. Shirk (O), 439 North Fifty-second street. Frederick Sabin & Co., Inc., 237-39-41 Bread street. Cost, \$475. Dwelling, 439 North Fifty-second street.

Mrs. S. J. McCarty (O), 1300 Marlborough street. Frank Achuff (C), 1600 North Front street. Cost \$500. Dwelling, second story addition, southeast corner Cabot and Marlborough streets.

General Mfg. Co. (O), Thirtieth and Market streets. H. P. Friend (C), Norristown, Pa. Cost, \$1,000. Machine shop, Swanson and Snyder avenue.

S. A. Taulane (O), southwest corner Ninth and Walnut streets. Charles Hoffman (C), 210 Dickinson street. Cost, \$500. Rooming house, fire escape, 804 Pine street.

Jas. T. Nulty (O), Frankford avenue and Church street. Cunningham & Bartholemew (C), 4326 Paul street. Cost, \$980. Garage, Church street and Frankford avenue.

Real Estate Trust Co. (O), Broad and Chestnut streets. Wm. Morrow (C), 320 Harmony street. Cost, \$850. Store, general alterations, 613 Market street.

Morris Simpkins (O), 4425 Main street, Manayunk, Pa. John J. Hurley (C), 4411 Cressen street. Cost, \$600. Store and dwelling, 4429 Main street.

J. H. Stimer (O), 4329 North Ninth street. Ed. Miller (C), 2505 North Tenth street. Cost, \$375. Garage, Darien and Bristol sts.

Stohrers Keystone Pickle Works (O), 118 Spruce street. G. R. Richman (C), 221 Elm avenue. Cost, \$1,600. New boiler, 113 Delancey street.

Mrs. J. Duesch (O), 414 W. Jefferson street. H. C. Leister (C), 1800 Harrison street. Cost, \$500. Dwelling, 414 W. Jefferson street.

Delaware Co. T. T. & Ins. Co. (O), Chester, Pa. D. F. Hoover (C), 4047 Warren street. Cost, \$1,300. Two dwellings, 628-30 North Forty-first street, fire damages.

Geo. B. Newton Coal Co. (O), 1527 Chestnut street. A. Marland (C), 1527 Chestnut street. Demolition.

Fayette R. Plumb (O), northwest corner Tucker and James streets. Wm. Keas (C), 4624 Penn street. Cost, \$3665. Locker, Tucker and James streets.

Geo. E. Drum (O), 2864 Frankford avenue. Cost, \$1,500. Dwelling, alterations, 3227 N. Seventeenth street.

Abram Engard (O), 742 Carpenter street. L. W. Kitschman (C), 125 E. Upsal street. Cost, \$500. Dwelling, brick, second story addition, 742 Carpenter street.

Mrs. E. W. Stokes (O), southeast corner Wissahickon and Westview avenue. Wm. C. Wright (C), 22 Harvey street. Cost, \$450. Garage, 623 Westview avenue.

Eva Cross (O), 5016 Pentridge street. Ray Cross, 5016 Pentridge street. Cost, \$300. Garage, 5012 Pentridge street.

City of Philadelphia (O), City Hall. James P. Farrell (C), 1621 Sansom street. Cost, \$32,200. Former Magdalen home, brick, general alterations, 2 two-story side additions, Twenty-first and Race streets.

Wm. Rock (O), 2463 Fairhill street. Wm. J. Jones (C), 2927 North Fifth street. Cost, \$500. Dwelling, 2463 North Fairhill street.

Powers Weightman Rosengarten Co. (O), Ninth and Parrish streets. Monaghan & Losse (C), 214 South Twelfth street. Cost, \$1,190. Storage shed, Ridge avenue and Calumet street.

street. Lewis Deitrich (C), 3016 Comley street. Cost, \$375. Dwelling, 3214 Comly street.

Prudential Worsted Mills (O), Orthodox and Large streets. Harry Gill, Jr. (C), 2515 Germantown avenue. Cost, \$23,000. Factory, northeast corner of Orthodox and Large streets.

H. N. Randall (O), 424 Walnut street. A. S. Townson, Jr. (C), 7014 Boyer street. Cost, \$800. Garage, stone, 1 story, 508 East Sedgwick street.

C. R. Hansell (O), 6909 Boyer street. A. S. Tourison, Jr. (C), 7014 Boyer street. Cost, \$600. Garage, stone, 1 story, 19x23 feet, 6909 Boyer street.

American Radiator Co. (O), 115 North Broad street. H. E. Grau Co. (C), 1707 Sansom street. Cost, \$25,000. Warehouse, brick,

1 story, 134x120 feet, Wharton and Taylor streets.

Annie E. Miller (C), 4900 Parkside avenue. Henry P. Schneider (C), 3713 Old York road. Cost, \$650. Dwelling, 4900 Parkside avenue.

Herman Switt (O), 5920 Walnut street. William M. Wyatt (C), 62 North Sixty-first street. Cost, \$1,000. Store, Sixtieth and Girard avenue.

T. Morris Perot, Jr. (O), Lafayette Building. John Baizley Iron Works (C), 514 South Delaware avenue. Cost, \$600. Fire escape, lodge room, 1033-35 West Girard avenue.

George A. Nahm (O), 2736 Girard avenue. Cost, \$600. Garage, brick and stone, 1 story, 2824 Girard avenue.

A. J. Krimin (O), 1005 Randolph street. Frank J. Stoll (C), 1432 Germantown avenue. Cost, \$475. Dwelling, 1005 North Randolph street.

Pennsylvania Railroad Co. (O), Broad Street Station. William N. Thompson (C), 1539 Filbert street. Cost, \$5,000. Freight building, alteration, Front and Berks sts.

Paul E. Sutro (O), 5115 Wissahickon avenue. Cost, \$2,000. Garage, brick, 2 stories, 28x22 feet, 5115 Wissahickon avenue.

Henry McCann (O), 2445 East Cumberland street. Henry A. Hobert (C), 2630 East Cumberland street. Cost, \$350. Store and dwelling, 2443 East Cumberland street.

Mrs. Robert Gilmore (O), 1332 Arrott street. James Spear Stove and Heating Co. (C), 1823 Market street. Cost, \$400. Dwelling, 1332 Arrott street.

John Gross (O), northwest corner Sixty-fifth and Girard avenue. Mowrer Bros. (C), Merion, Pa. Cost, \$400. Retaining wall, Sixty-fifth and Girard avenue.

R. H. Foerderer Club (O), 3743 Frankford avenue. Otto Schumann, Jr. (C), 1629 Worrell street. Cost, \$1,725. Club house, 3743 Frankford avenue.

Haslam & Querner (O), Howard and Lehigh streets. George Kennington (C), 2435 Hope street. Cost, \$1,100. Dye house, new roof and general alterations, Howard and Lehigh avenue.

Elizabeth Greenwood (O), 2202 Amber street. William E. Stone (C), 2069 East Dauphin street. Cost, \$850. Store and dwelling, 2202 Amber street.

A. C. Scheen (O), 237 West Wyoming avenue. Cost, \$500. Garage, brick, 20x20 feet, Boulevard, south side, west of Whitaker avenue.

H. C. Killian (O), northeast corner Van Pelt and Susquehanna avenue. Hugh Hazlett & Son (C), 701 North Twentieth street. Cost, \$850. Store and dwelling, northwest corner of York and Sydenham streets.

Mrs. Mary Magee (O), 1717 Wingahocking street. William Bean (C), 4411 Germantown avenue. Cost, \$2,000. Store and dwelling, hot water heating, addition and bay window, 1717 Wingahocking street.

Joseph J. Geyer (O), 2821 Lambert street. Cost, \$800. Garage, Lambert street and Stella street.

James R. Witherspoon (O), 238 North Front street. Brownworth & Co. (C), 1611 Sansom street. Cost, \$600. Factory, 240 North Front street.

W. Adolph Peters (O), Lehigh avenue and Twenty-ninth street. E. E. Hollenback, Inc. (C), Fifteenth and Race streets. Cost, \$1,800. Garage, brick, 1 story, 36x38 feet, 2534 Huntingdon street.

M. Ogden B. Loxby (O), 7314 Boyer street. Edward Stoll (C), 33 Nippon street. Cost, \$310. Porch, 7314 Boyer street, Mt. Airy.

Mary L. Wood (O), 910 Huntingdon street. J. T. Carberry (C), 1644 Orthodox street. Cost, \$3,200. Store and dwelling, York road and Lindley avenue.

Editorial Comment

It is necessary to go back to 1907 to find an April building record equal to that of Philadelphia for the month which has just closed. In a period of ten years but one April is able to show figures in excess of April, 1916. The figures for the month were closed officially on Saturday at noon with a total of \$6,227,780. April, 1907, the one month in ten years which has surpassed this total, made a return of \$6,893,500.

Notable among the items which resulted in making April, 1916, a month of unusual activity in building expenditure were: a disbursement of \$1,300,000 for a 15-story apartment house to be erected at Nineteenth and Walnut streets; \$2,679,450 on two-story dwellings and \$410,300 on three-story operations. A warehouse to cost \$600,000, twelve factory buildings to cost \$256,500, and seventy-four garages to cost \$108,295 figure in the total. The item of additions contributes \$368,510, and alteration and repairs foot up \$196,490.

In all there were granted during the month 861 permits, covering 1,915 separate operations as compared with 783 permits for 1,606 operations during March. The total of expenditure for March was \$4,590,630. April of 1915 showed 930 permits for 1,838 operations costing \$3,449,900.

The first four months of 1916, taken from the official records of the Philadelphia Bureau of Building Inspection, show an expenditure for building of \$15,115,250. The increase over the corresponding months of 1915 totals \$2,791,550.

There is, however, a decrease of 305 permits and 890 operations compared with last year, traceable, in the opinion of architects, to the higher cost of materials and labor.

It will be observed that this goodly City of Brotherly Love is valiantly maintaining its record as a building center in spite of the war abroad, Presidential campaigning, the higher cost of living and other considerations that enter into the economic trend of things.

* * *

The Pennsylvania Railroad is preparing to erect, opposite its new terminal in New York City, a hotel to cost \$7,500,000. The new structure, which is to be known as "The Hotel Pennsylvania," will be twenty stories in height, is to occupy a site 200x400 feet, and will contain 2,200 rooms. McKim, Mead & White are the architects. It is estimated that the furnishing alone will cost in the neighborhood of \$1,500,000. Franklin J. Machette, of Milwaukee, is the prospective lessee.

* * *

Another notable New York venture is a group of model tenements to be erected just west of Seventh avenue, between 146th and 147th streets. Henry Atterbury Smith is the architect. The tenements are to be of the open-air stairway variety, with roof garden

playgrounds and every modern sanitary convenience. The structures are designed to house 648 families and will cost, to build, more than a million dollars. The suites will be rented by the week and the enterprise conducted without any suggestion of charity.

* * *

Joseph S. Auerbach, in an address at the meeting of the Washington Square Association, New York City, says the "American Contractor," referred to the principles which should actuate the best citizenship in constructive city planning work.

"Paris is admittedly the most beautiful city in the world," said Mr. Auerbach, "but it is so much more by force of public opinion than by force of law. The height of buildings is regulated by statute, but that which has made and keeps Paris a harmonious whole is a dominant public opinion and public spirit that will not be denied, and the architect who should consent to draw plans for a building out of harmony with its neighbors or not fitting for its environment runs the risk of professional ostracism, and its owner or tenant of industrial, commercial, social or political ostracism, as the case may be.

"In our superficial way we speak slightly of the levity of the Parisians, but we fail to understand that the resolve which makes their city beautiful is but a manifestation of that spirit which makes all the other cities of France fair to look upon, and which in great emergencies is found disciplined and responsive to the call of heroic sacrifice.

"We declaim a good deal about American ideals, but surely declamation which fails to match with performance is not a good asset of the republic. And surely it is not below our dignity for us here to have for one of our beginnings the beautifying of our little Washington Square district."

* * *

The "Philadelphia Ledger," which has been indulging an occasional reference, from time to time, to the carelessness with which some of the younger men in architecture send out plans for important work, presents the appended criticism of cases in which this kind of negligence works to the serious disadvantage of the bidder.

"Well, here it is again, and still incomplete. Perhaps after it has gone in a few more times and comes out for final bids it will be a finished set of plans, capable of being understood and including everything the architect intended to complete the building.

"This is just a small portion of a conversation overheard between several sub-contractors," says the "Ledger." "That the facts in the case justified it, no one in the trade will doubt, and should be an argument for more carefully drawn plans—and a careful scrutiny on the part of the architects before

they are sent to the builders for estimates.

"At this time of high prices of building materials, the sub-contractors are not going to take many chances, and anything left in doubt is added to their bids with enough margin of profits to insure a substantial addition to the plans. There never was a time in the history of architecture when care was so necessary in the preparation of the plans; the rapid change of prices in building materials make it necessary to almost keep in daily touch with the market to avoid underestimating the cost of proposed buildings.

"Some of the architects, in preparing plans for proposed buildings, have labored under the delusion that these could be erected to-day almost as cheaply as a year ago. The result of such surmises, in most cases, have been disastrous, with the usual result of revised plans. For the benefit of those who have not had occasion to closely follow the market, it might be said that at least 15 and as high as 25 per cent. additional (varying according to type of buildings) should be added to prices of a year ago, in approximating the cost of buildings."

* * *

In an effort to make better citizens of the great number of foreign workingmen employed in small communities about the country the National Americanization Committee is about to hold a competition for plans for proper housing for these people. The architects of the country have been invited to take part in the competition, which has been made possible through the creation of a "Roosevelt American First Fund," from which a total of \$1,800 has been set aside for prize money.

It is hoped that the results of this competition will be applicable to housing needs in any community, but they are desired particularly to provide for immigrant workmen and their families an opportunity to live according to American standards and thereby, so far as possible, to eliminate the evils due to the aggregation of large numbers of foreign born laborers in crowded and unsanitary quarters, for it is such quarters, the committee declares, which prevent any progress toward American standards of living among foreign born laborers even after years of residence in America.

The competition is divided into several sections. The first calls for a house for one family only and for a one family house of larger size than the first. The second problem is a dwelling for a family with four lodgers and the third is a boarding house for thirty lodgers. Two prizes are to be awarded under each of these headings, a first of \$300 and a second of \$100. The competition is to close on June 1 and the results are to be announced by July 1.

* * *

Throughout the country new industries are constantly producing new communities, with the consequent need of supplying dwellings for a large number of employees. During the last year especially such industrial communities have been created with phenomenal ra-

pidity. Towns of 500 have grown into towns of 30,000 within a half year's time. Men flock by thousands to places where there are plenty of jobs but no dwellings. A large percentage of these workmen are immigrants, who have no way of creating American standards of living for themselves. If such standards are not provided for them, and insisted upon, groups of immigrant workmen are bound to follow European standards of living and customs, vitally affecting the social health and prosperity. The community that results from these conditions cannot be an American community.

The committee in charge of this competition finds that most industrial communities of the country in which immigrants are a considerable percentage of the population are now characterized by separate quarters for foreign workmen, with all kinds of makeshift or otherwise unfit dwellings and distinctly un-American standards of living. This committee believes that these conditions are due largely to the fact that not enough attention has been paid to the subject, and that plans and suggestions have not been immediately available to meet the sudden and peculiar housing needs that result from the rapid clustering of towns around industries.

* * *

The purpose of the competition is to produce good and economical plans for low cost dwellings, which may be used as standard types in the work of the national Americanization committee in directing the attention of manufacturers, property owners and municipalities to the importance of the problem and the factors constituting it, and to provide definite indications for the solution of the particular problems which may be presented.

The housing competition committee in charge of the contest includes: J. G. Schmidlapp, chairman; Chester H. Aldrich, vice-chairman; John Ihlder, secretary; Mrs. Vincent Astor, Grosvenor Atterbury, Mrs. Albion Fellows Bacon, Charles W. Baker, James B. Brady, Owen Brainard, F. C. Brown, C. L. Close, E. L. Corthell, George A. Cullen, Mrs. William Bayard Cutting, Miss Emily W. Dinwiddie, Gano Dunn, Edward T. Hartman, Dr. Caroline Hedger, J. Willard Helburn, Frances A. Kellor, Morris Knowles, C. Grant La Farge, John L. Mauran, R. F. Parsons, Charles Raymond, Calvin W. Rice and Mrs. Johanna von Wagner.

The judges of the competition will be Chester H. Aldrich, architect, New York; Grosvenor Atterbury, architect, New York; Dr. Caroline Hedger, Chicago, Ill.; John Ihlder, Washington, D. C.; Morris Knowles, sanitary engineer, Pittsburgh; J. Lawrence Mauran, president, American Institute of Architects, St. Louis, and Milton B. Medary, Jr., architect, Philadelphia.

* * *

The Hispanic Society of New York is about to erect a permanent memorial to Cervantes to commemorate the three hundredth anniversary of his death. The trustees decided that rather than have special pageants or other ephemeral celebrations they would mark

the event in a way that would be enduring. They therefore determined upon the erection of what is to be called the Cervantes Gate, a great bronze gate, within an arch fifty feet high. It is to stand to the west of the society's grounds on Broadway at 156th street.

The arch was designed by Charles P. Huntington. At the top will be the inscription: "Erected in Commemoration of the Tercentenary of the Death of Miguel de Cervantes Saavedra, 1916."

The gate itself will be of massive bronze, weighing over two tons and being twenty-six feet high and twelve feet broad. Upon it will be the shields of Spain and of all the Spanish American republics.

The Hispanic Society is now holding an exhibition of great interest to admirers of Cervantes. It includes many portraits of the best editions, not only of his masterpiece, "Don Quixote," but also of his less well known works.

* * *

The need of a Municipal Art Society, here in Philadelphia, to take action against the desecration of streets of the better class with ugly signs, bill-boards, and general impedimenta of the kind, is somewhat strikingly illustrated just now by a case in point at the northwest corner of Broad and Spruce streets. Here, facing Broad street, and extending nearly the entire width of the church property on this site is a glaring, hideous sign board shrieking the merits of somebody's coal.

It would be interesting to learn what visitors from other cities think of the standard of taste that permits an abuse of that sort right in the very heart of the hotel district and on the city's finest promenade.

A NATIONAL HOUSE-WIRING CAMPAIGN.

Not eight per cent. of the homes in this country are wired for electricity, and not twenty per cent. of those on existing lines from central stations have electric service. With these facts in mind plans have been formulated for a nation-wide house-wiring campaign, to be conducted from March 25 to April 25, by the Society for Electrical Development. A committee has been appointed to supervise the campaign.

Advertise and the world buys of you;
Renig, and you need a loan.
If you never tell what you have to sell,
You'll have troubles all your own.

Harry Edwards (O), 808 North Broad street. C. M. Swarthly (C), 6835 Ridge avenue. Cost, \$500. Dwelling, south side of Fairthome avenue, east of Ridge avenue.

William Shay (O), 9546 Bustleton avenue. C. H. Weiss (C), 9512 Bustleton avenue, Philadelphia. Cost, \$2,500. Dwelling, Berusalem road.

F. R. Freas (O), 1416 Hunting Park avenue. William S. Gadey & Son (C), Cheltenham, Pa. Cost, \$500. Dwelling, brick, 1416 Hunting Park avenue.

P. & J. Zeiser (O), 2934 Kensington avenue. F. Pizziloo (C), 3348 Almond street. Cost, \$345. Dwelling, 4926 North Lawrence street.

W. A. J. Shaffer (O), 5422 Lawrence street. D. W. O'Dea (C), 5227 North Fifth street. Cost, \$300. Dwelling, 5422 North Lawrence street.

Daniel F. Deal (O), 5400 Haverford avenue. J. D. Fisher (C), 5718 Market street. Cost, \$1,100. Garage, Fifty-fourth and Westminster avenue.

Philomathean Society (O), University of Pennsylvania. Cost, \$1,000. Temporary grand stand and scenic wall, 70x100 feet, Thirty-seventh and Woodland avenue.

Gottfried Kerner (O), 352 Marlin street, Roxborough. Howard Yocum (C), 410 Lyceum avenue. Cost, \$400. Dwelling, 352 Martin street, Roxborough.

Anna and Judah Forman (O), 542 Moyamensing avenue. Andrew Perewerkin (C), 408 Hoffman street. Cost, \$350. Dwelling, 542 Moyamensing avenue.

Lit Brothers (O), Eighth and Market sts. John N. Gill & Co. (C), 1215 Filbert street. Cost, \$5,000. Garage, brick, southeast corner of Twentieth and Washington avenue.

Consolidated Construction Co. (O), Vaux and Bowman streets. Cost, \$125,000. Residences (41), brick, 2 stories, 16x50 feet, slag roof, Indiana avenue and Queen lane.

Dr. Louis Jacobs (O), 517 South Eighth street. Alexander P. Lueker (C), 1727 North Fifty-first street. Cost, \$700. Dwelling, brick, 4 stories, 17x65 feet, 517 South Eighth street.

Johanna L. Boyd (O), 316 E. Tioga street. Cost, \$5,000. Two dwellings, brick, 2 stories, 15x40 feet, Front and Tioga streets.

Mary V. Ward (O), corner East and Cresson streets. Harry Pollard (C), 3718 Manayunk avenue. Cost, \$300. Brick, 3 stories, 16x58 feet, slate roof, 4003 Cresson street.

Mrs. Chas. W. Lee (O), 4743 Leiper street. C. West & Co., Oxford road and Wakeling street. Cost, \$600. Dwelling, brick, 3 stories, 16x59 feet, 4743 Leiper street.

Wm. K. De Victor (O), West End Trust Building. John G. Shark (C), 6130 Torresdale avenue. Cost, \$18,000. Ten residences, Cottage and Benner streets.

Blaumer Inc. Co. (O), 833 Market street. Fleischmann Const. Co. (C), Real Estate Trust Building. Cost, \$75,000. Department store, 833-35 Market street, 4 stories, brick, 43x204 feet, slag roof.

Scott Bros. (O), 1619 Allengrove street. Cost, \$43,200. Thirty-five residences, brick, 2 stories, 14x42 feet, slag roof, hot water heating, Hedge and Bridge streets.

C. West & Co. (O), Oxford avenue and Wakeling street. Cost, \$23,600. Four residences, brick, 16x47 feet, 3 stories, slate roof, hot air heating, Twelfth and Wakeling streets.

A. M. Zane (O), 2200 Tioga street. Cost, \$73,200. Thirty-two residences, brick, 2 stories, 18x36 feet, slag roof, hot water heating, Twenty-sixth and Allegheny streets.

Wm. Schmidt (O), 4936 North Fairhill st. Cost, \$3,000. Residence, brick, 2 stories, 16x42 feet, Godfrey avenue and S street. Cost, \$6,000. Two residences, brick, 2 stories, 16x42 feet, Cheltenham avenue and G street.

Walter Rowland Dexter (O), Lyceum st. Cost, \$12,600. Six residences, brick, 2 stories, 15x42 feet, tin roof, Walnut lane east of Mitchell street.

F. S. Park (O), 4106 Girard avenue. Cost, \$137,500. Fifty-one residences, brick (2 stories, 16x45 feet, slag roof, Colorado, Oregon and Seventeenth streets. Cost, \$10,500. Three stories and dwellings, brick, 2 stories, 15x54 feet, slag roof, hot air heating, Seventeenth and Oregon streets.

Charles M. Weild (O), 2316 South Broad street. Cost, \$168,000. Sixty-seven residences and three stores, brick, 16x54 feet, slag roofs, hot water heating, Twenty-seventh and Smedley streets.

Samuel A. Stiltz (O), Colmar, Pa. Stiltz & Mulowry (O), Sixty-seventh and Elmwood avenue. Cost, \$15,2000. Eight brick residences, 2 stories, 16x32 feet, Sixty-seventh and Elmwood avenue.

Mrs. H. D. Patrick (O), 1119 Lehigh avenue. The Makin Heating Co. (C) (6 North Eighteenth street. Cost, \$450. Residence, heating system, 1119 Lehigh avenue.

Francis B. Mullin (O), 6256 Market street. C. R. Anderson (C), 23 South Sixty-second street. Cost, \$400. Bakery, brick, 6254 Market street.

Chris. Vogt (O), Twenty-second and Cambria streets. Cost, \$1,000. Wagon shop, brick, 1 story, Cambria and Twenty-third streets.

M. Boaioff (O), 427 Green street. Zuck & Gleckman (C), 838 North Seventh street. Cost, \$3,000. Store and dwelling, 859 North Lawrence street.

M. Leighton (O), 4219 Main street, Manayunk. Friend Scargill (C), West Manayunk. Cost, \$400. Store and dwelling, 4219 Main street.

Taylor & Bro. (O), 26 South Fourth street. J. T. Johnson & Son (C), 331 North Fourth street. Cost, \$400. Sign on roof, 3600 Market street.

VARIATION IN BUILDERS' ESTIMATES.

Some of the Differences Noted in Connection with Actual Bids on Contracts for Construction Work.

It is a well known fact that in the competition for work, builders' estimates frequently vary to a surprising extent, and some of the results of this competition are set forth in the Monthly Letter of Secretary Sayward of the Master Builders' Association of Boston. The following extracts cannot fail to be read with interest:

"On a bank alteration job, an alleged ambiguity in specifications led to one contractor's success. He found, after he had expended about \$100 on the job, that the architect was expecting him to do things he had not estimated to do. Inquiries easily established the fact that four other bidders had all included the items in question—the successful had not. Owner, architect and builder each pair one-third of the cost of the error, about \$300 each. But what of the unsuccessful bidders?

"On a house some distance from Boston, about ten years ago, three bidders figuring about alike were above the price set by the owner for his expenditure. The architects, a leading firm, told him he could cut his requirements, or could get another series of bids from men doing a lower grade of work. He chose the latter alternative, and his house was built within his price.

"On a job of interior finish, some distance from Boston, three or four years ago, three Boston bidders doing a similar high grade of work were within \$1,000 of \$137,000. The work was let for \$92,000 in another city, and, even after adding on an acknowledged error of \$25,000, the successful bidder would still have been 16 per cent. under the Boston men. None of the Boston men would have made over \$15,000 on the job.

"On a small job in a small town, five figures were \$9,500, \$9,300, \$9,000, \$8,900 and \$6,600. What is obviously within a few hundred dollars of the right price? The owner was delighted at the low price. Why should he have been?

Bell Phone

Keystone Phone

"On a recent bank alteration job, with six bidders, four were eliminated after the bids were in because they were not local men. Refiguring of cuts was done by the other two, and one dropped one thousand dollars more than the value of the cuts (finding he had to do so), an although still high was awarded the job because he was a depositor in that bank, while the other was not.

"On a job in 1912, where cuts were figured, one competitor dropped five hundred dollars where twelve hundred dollars' worth of stone mason's foundation work was change from stone to concrete in location where materials for either were easy to get. Cuts offer a splendid opportunity for one man to drop by another, and win by, in fact submitting a second figure when he surmises his first one was a little too high.

"Recently, subcontractors for painting figured so cleverly that the lowest on a job was \$650 and the highest \$2,180, with enough good men together around \$1,500 to show that probably there was the right price. Some contractors figuring would use the low figure, others not wanting to must do so, or risk their chances of winning. This element is a common feature of competitive bidding.

"In September, 1915, a reputable Boston architect of a fairly large job stated that the owner had a fixed price for his work, and that he had purposely selected a list of bidders commonly varying widely in price and in quality of result. From them he had chosen

as good a man as he could, and come within the price established; and he said that he regretted not being able to choose a better man.

Effect of Guarantee.

"Two or three years ago, an owner who formerly let a contract to a bidder about 20 per cent. under a group of competitors, and who was not satisfied with the results obtained, strove to mend matters upon some further work by a most stringent three-years' guarantee—the strongest document of the sort ever seen by Boston contractors who estimated the work. This document was the work of the owner, not of his architect. Here was a direct intent to make a silk purse out of a sow's ear by legal verbiage—followed, if needed, by legal procedure.

"A few years ago a hard-fought job near Boston was awarded to the contractor fourth from the bottom in a list of six bidders. Later, he was told the owner always intended him to do the work.

"Recently, on a job a few miles from Boston, the owner told one bidder that he wanted him to do his work and that he would pay a preference, but not a large one. The job went to another man, who by the use of two subcontractors, whose bids the preferred man had but did not care to use, saved more than the difference between the two figures.

"In 1915, a job near Boston had four bidders within a fifteen-hundred-dollar variation figuring around \$62,000, while a fifth was about \$50,000 and won the award. What will

happen to the winner and to the work he does?

"Time is of the essence of this contract.' How often this is written! A year ago a large job was let to be completed August 15, 1915. On October 1, 1915, it was nearly done. A contractor's promises for time are commonly taken in preference to an examination of his performances.

The Forfeit Clause. . .

"Not long ago the wife of an owner told a friend about to build to put a forfeit clause into his contract, for the reason that it could always be collected, for some reason or other, and was a good way to save on a contract.

"Recently an architect asked for two bids from general contractors. With one of these the architect was in league to the extent of giving him competitor's prices in order that he might bid under them—and the other contractor knew it—and knew the owner. After the bids were in, he approached the owner thus: 'Now, Mr. Blank, I have a grudge against Smith, my competitor, and I can work it out and show you how to make a thousand dollars if you will give me fifty dollars.' Mr. Blank agreed. 'I will go to your architect, claim I made a mistake, withdraw my bid, put in another one, one thousand dollars lower; your architect will tell his friend, who will do the same thing. You will make a thousand, and then send me fifty.'

"On a job of plumbing worth \$750 a low bidder was awarded the work at \$475. Re-

Signs 2 x 3 ft., 12c. Each

There is nothing more dignified or elegant than our large Weatherproof Fiber Cardboard Signs. Easy to carry, quick to place, not greasy, more serviceable than wood or iron, impervious to all weather conditions and cost from 8 to 20 cents apiece—in lots of one hundred.

INDEPENDENT PRINTING COMPANIES OF U. S. - Washington, D. C.

cently, two years later, alterations were made, and the hot and cold water piping, specified "iron-sized brass"—a good brass pipe—was found to be gilded iron.

"The above cases, excepting one or two, are typical instances of occurrences which are very common—so common that they would not be worth reciting were our readers only those familiar with building operations. The cases quoted are not garbled or exaggerated, but are normal, and are all actual happenings."—"Building Age."

HOUSING COMPETITION.

Prizes aggregating \$2,100 are offered for plans, sketches, grouping and arrangement, for the housing of immigrants in industrial towns. The Competition is conducted under the auspices of the National Americanization Committee, with the co-operation of the various societies and institutes of architects and engineers. The contest closes May 1st.

The prizes are divided into two groups. The first covers plans for the housing of workmen in industrial communities not exceeding a population of 35,000. Entries in this class include plans for (1) single family houses; (2) combined family and lodging houses, which will permit separation of the family from the lodgers; and (3) boarding houses or community dwellings for numbers of single men or of single women.

The first prize for this class is \$1,000, the second \$500, and the third, fourth and fifth \$100 each. In the first group, the committee has in mind a new community produced by a new industry, with the consequent need of supplying dwelling for a large number of employees. A considerable proportion of these employees will be needed permanently; the rest, as the construction gangs, from two to five years only. In the statement of the conditions of the contest, which is being issued to competitors, it is pointed out that

these two important considerations are the welfare of the tenant and the cost. The wages of the employees for whom the houses are designed are to be from \$2 a day to \$20 a week.

In the second group a first prize of \$200 and a second of \$100 is offered for a satisfactory substitute for the derailed freight and cattle cars now used to house construction gangs on railways.

Inquiries may be addressed to the National Americanization Committee, 20 West Thirty-fourth street, New York City.

VALUE OF STAIRWAY ENCLOSURES.

New York Chapter, of the National Fire Protection Association, has issued the report of its special committee appointed to investigate the Diamond candy factory fire in North Sixth street, Brooklyn, last November. The report says in part:

"It is our belief that had the stairways been enclosed throughout with even the lowest grade of partition material permitted by the State Labor Department, the occupants of this building would have escaped in safety. We consider that the type of stairway enclosure which was in progress of erection on the third floor at the time of the fire was not at all suited to the purpose. It is quite possible that such construction would not have been accepted by the Labor Department, but nevertheless we wish to register a protest against such construction, and the fact that it would not be acceptable should be so clearly understood by all factory owners that they would not even tentatively assume that it would be worth while attempting to 'put it over.'"

"Sheet metal is a very poor resistant to heat, and when attacked by fire quickly becomes red hot. In that case it would instantly ignite the dry boards to which it is

attached and would quickly fill the passageway with smoke and perhaps flame. We believe that if such low grade construction is permitted, a layer of asbestos board, plaster board or other incombustible, non-conducting material should be placed between the sheet metal and the woodwork, or the wooden partitions should be properly covered with metal on both sides."

WATERPROOFING CONCRETE AND MORTAR.

Architects and engineers now appreciate the necessity of waterproofing both concrete and mortar, not only for obvious waterproofing reasons, but also to increase the strength and durability of the work. In the past the most satisfactory method of accomplishing the work was the application of surface waterproofing. This, if done correctly and thoroughly, is expensive both in materials and the labor of preparation.

The great objection to surface waterproofing is that if it is ever marred or destroyed the natural porosity of the concrete will permit of the absorption of water from the smallest crack or opening, and will distribute it throughout the mass, thus creating a condition of dampness oftentimes inexplicable. In waterproofing walls, the integral method has been found to be satisfactory. By this method every portion of the mass acts as a bar to the water, instead of merely a surface skin. The difficulty often found with integral waterproofing has been the lack of uniformity in the mass, and has necessitated the services of experts in handling the material, which in most cases is impractical for general use and prohibitive on account of the increased cost.

A patented material can now be obtained which, if used integrally in work more than three inches in thickness, will not only damp-proof a wall, but will resist a water pressure of forty pounds to the square inch. This is the claim of the manufacturer. It is further stated that its use is so simple that any laborer accustomed to mix concrete should be able to manipulate the material with satisfaction. Another advantage claimed for this product is that it overcomes some of the other faults of the concrete as a building material. It counteracts the slight contraction of the mass in setting, thus making it possible to be used in repairing old cracks and in coating old walls for waterproofing purposes. Used with cement in mortar in which bricks are laid, it is said an airtight as well as a watertight job results, and also there is less danger of white stains and other defacing spots, due to the reprecipitation of dissolved salts, on the surface of the wall. The use of this product, it is stated, does not add materially to the initial cost of the construction of the building.

Evans "Almetl" Fire Doors (AND SHUTTERS)

PATENTS PENDING

Approved by Underwriters' Laboratories, Inc., Chicago.

All Metal—Strong, — Light, — Attractive

Installation of EVANS "ALMETL" approved fire doors in large wire rope works.

The Evans "Almetl" Fire Door is the logical fireproof closure for openings in fire and division walls.

Made entirely of non-combustible material, — fully approved, — will reduce insurance rates.

Accepted generally by Fire Control Bureaus.

Also "Star" Ventilators, "Merchant's Old Method," Roofing Tin, Metal Tiles and Shingles. Everything in Metals.

ANCHOR POST FENCES

are not the ordinary kind—they are fences of heavy galvanized netting erected on Anchor Posts—posts which won't sag or get out of line, and are galvanized both above and below ground to prevent rust.

In addition to fences and iron railings and gates of every kind we make tennis court, chicken-run and kennel-yard enclosures.

Of the

Master Builders' Exchange

18 South 7th Street, Philadelphia

Is open to the public every day except Legal Holidays and Sundays.

If you are manufacturing or handling anything pertaining to the construction or completion of a building, and you do not have it in the EXHIBITION DEPARTMENT of the BUILDERS' EXCHANGE, you should get it there AT ONCE, for that is where the people come to look for such things.

Building Materials and Appliances are there to be seen, and special care is given to explaining the merits and uses, and giving all information required.

Liquid Filler

The first Liquid Filler made and the best, answering every requirement of Nice Standard.

TRADE MARK **NICE** REG. U.S.A.

Wood Fillers are the trade's standbys. You can shoot at them from any standpoint without making any impression.

They are economical in time, labor, material; and produce wonderful results. In addition they are indispensable to every painter and finisher because of their adaptability to other uses.

A postal will bring you samples and catalogue free.

FRANK C. GILLINGHAM & SON COMPANY

PHILADELPHIA

BUILDING LUMBER

A Roofer's Opinion—

THE promotion of The Barrett Specification, we believe, has standardized and bettered the whole roofing trade. It has furnished a secure and fair basis for competitive bidding, to the joy of all honest roofers and contractors.

It has improved the general quality and thereby added greatly to the life of slag and gravel roofs.

It has protected architects, engineers, and owners by specifying definite materials, definite quantities and definite methods of construction.

The best roofers now prefer to bid on the basis of The Barrett Specification. As an instance of this fact we quote from a letter written to us recently by

the Ford Roof Construction Co. of New York:

Its success means the better protection and welfare of the roofer who stands for good work and the faithful observance of specifications. We know of no more promising means for realizing this vital end than the consistent and sustained course you have followed during the recent past years, and trust there will be no faltering in the long campaign directed toward elevating our craft.
(Signed) F. A. Ford, Pres.

If you are an architect or engineer, we suggest that you include The Barrett Specification verbatim in your building specifications. It will insure a roof that has a lower cost per year of service than any other known roof covering—a roof that costs nothing to maintain—a roof that is endorsed by the Underwriters' Laboratories and that takes the base rate of insurance.

A Copy of the Barrett Specification, with roofing diagrams, free on request.

Hydronon

The Damp-proofing paint

Reduce building expenses by coating the inner surfaces of all walls above the ground level with Hydronon and apply the plaster directly over same without lath and air space. The Hydronon excludes dampness and gives a dry base for the plaster.

Hydronon is very dense and penetrates into the wall forming a tight seal. It has superior covering capacity and is vastly superior to other damp-proofing paints in its permanent resistance to dampness. Its superiority has been demonstrated by a series of scientific tests which are described in a booklet which will be mailed free on request.

Velvex Creosote

Shingle Stains

Every desirable color in soft velvety shades. Can be used on unplanned wood of any kind.

The creosote makes them highly preservative and fire-resisting. Booklet free on request.

Editorial Comment

The twenty-seventh annual report of the City Parks Association, issued last week, contains a mass of carefully compiled data that should be of interest to builders and architects. This report estimates, to begin with that not less than two hundred and fifteen thousand people, more, in fact, than the combined population of Erie, Altoona, Wilkes Barre and Williamsport, will be added to the Philadelphia metropolitan district during the next four years.

If the report presented nothing else of interest this estimate, based on a calculation of previous rates of growth in the city's population, should imbue operative builders with a sense of the healthy and consistent demand likely to avail the opening up of new outlying sections.

By way of stimulating expansion of the city's population the association presents a series of recommendations for the beautification of various outlying districts.

The prompt acquisition of Kirkbride's, on the west bank of Cobb's Creek and all of Tacony Creek not yet taken for park purposes, is urged. Concerning Kirkbride's it says that "we recommend strongly that without further delay an ordinance be passed to place the property as a park on the city plan. It can then be acquired by instalments through condemnation proceedings from time to time."

"Kirkbride's," it says, "will be the Central Park of West Philadelphia," and it further asserts that that section of the city has been "damaged irreparably for all time through the loss of Sherwood Forest" and that "Kirkbride's must not be another Sherwood Forest."

Cobb's Creek Park and the two sections of Morris Park, along the east and west branches of Indian Creek, should be extended to the sources of the streams "one of which is near Bryn Mawr, another near Ardmore and the third near Narberth." Several photographs are printed to show the impossibility of making a complete Cobb's Creek Park unless a strip along the west side of the valley is acquired.

* * *

There should be no delay in the completion of the Parkway and the Art Museum, according to the association, because "such improvements pay for themselves in the long run through increases in the assessed valuations of the neighboring property," and "the longer the city delays, the longer this monetary return from increase in income from taxation will be postponed." It expressed the hope that \$3,000,000 would be provided in the loan bill for the Museum of Art. The report was drafted before the present loan bills were formulated. "The folly of delay in the construction of the museum," it said, "has been already sharply demonstrated during the last

year." A reproduction of the model for the museum forms the frontispiece of the report.

While commending the progress in port development which had been made, the report makes a plea to the city planners to turn their eyes to that portion of the Delaware River southwest of the Schuylkill. "We believe," it says, "that Philadelphia is short-sighted in not recognizing the unsurpassed possibilities of its metropolitan area.

"The opportunity for a great Philadelphia port lies southwest of League Island. It lies between the junction of the Schuylkill and Delaware Rivers and Chester.

"Here is a magnificent territory, which is 8 or 10 miles nearer deep water. Especially important is the fact that it lies below the Horseshoe. It is traversed by three railroads, the Pennsylvania, the Baltimore and Ohio and the Philadelphia and Reading. The new rapid transit lines should tap this territory, thus extending as far southwestward as we are already contemplating their extension northeastward.

"This territory is available for the construction of piers and docks 2,500 to 3,000 feet in length. The latest New York piers are from 1,700 to 2,000 feet in length."

* * *

Philadelphia, the association urges, should take up the Schuylkill embankments as the next project following the completion of the Parkway. It asserts that the city could not advertise itself more extensively than by such improvements, and it refers to what has been done in Boston, Washington, Chicago, Montreal and other cities along this line. If Philadelphia "is the first American city of the United States to construct such embankments in a really effective manner, it will secure additional advertisement," the association contends, "but its chance for leadership is rapidly being lost."

* * *

"In other cities," it says, "public spirited citizens have not hesitated to subscribe \$25,000 to \$50,000 to secure the preparation of adequate plans. If the Comprehensive Plans Committee does not promptly undertake a Metropolitan Plan, may not Philadelphia count among its numbers citizens of a civic patriotism equal to that of the citizens of other American cities?"

* * *

The report notes the passage of an act by the last Legislature designed to protect residential zones and to enable the city to regulate the height of buildings. "Any self-seeking iconoclast of property values may establish any kind of an industry in a residence district," the report says, "provided it is not a bone-boiling establishment or similar nuisance, and thereby cut land values in half overnight.

"The deepening and darkening of Chestnut

street canyon, its increasing dangers to public health and its utter inadequacy for the traffic caused by the skyscrapers are becoming more obvious every day. If the disease of skyscrapers is to be quarantined within the affected area, and if all the rest of Philadelphia is to be safeguarded from it, prompt action under the foregoing act must be had. We earnestly urge that regulations of the height and use of buildings, properly directed to promote the public health, safety, order and general welfare, shall be passed for the entire city, and that the Park Commission shall make vigorous measures applicable to parks generally and particularly to the Fairmount Parkway and other boulevards under its jurisdiction. No more imperative duty confronts the city and its public authorities than action to enforce its power under this excellent enabling act."

* * *

The report urges excess condemnation and the assessment of special benefits as the means of paying for city improvements. It quotes figures from Montreal showing how by means of excess condemnation the city has secured two new streets and a part of two acres with an actual profit of \$54,000. It strongly recommends that every kind of public improvement shall, where there are special benefits, be paid for, to the extent of such benefits, by special assessments.

"It should be appreciated," it says, "that failure to assess special benefits where there are special benefits cripples the progress of the city and prevents other property owners from getting improvements to which they are equally entitled. The city has only a certain sum to spend on developments; the assessment of benefits will make that sum go much further than it would if there were no such assessment.

"For instance: if the city spends \$5,000,000 on an improvement and no benefits are assessed, that one improvement is all it gets. Suppose, however, it assesses 80 per cent. of that cost on the zone of property increased in value by it; the city will then have \$4,000,000 for another improvement; if it assesses 80 per cent. of this cost likewise it will have \$3,200,000 for a third improvement; after that improvement is likewise financed by special assessments, it will have \$2,560,000 for a fourth; then \$2,048,000 for a fifth, \$1,638,400 for a sixth, and so on; getting many times more improvements than it otherwise could. If the special assessment is higher, then the \$5,000,000 will go farther; if lower, it will probably vary with each improvement, but the city is bound to progress far more rapidly than it would if the expenditure of the taxpayers' money is not permitted to reap the benefit in special improved values which that expenditure creates."

* * *

Out of the existing loan funds, in the event of an ordinance pending before Councils being passed at the next session, as is considered likely, more than one hundred thousand dollars will be expended during the coming summer in bettering the condition of eleven

of the smaller parks of the city. The largest item in the bill, which was reported with a favorable recommendation by the Finance Committee during April, sets aside the sum of \$21,500 for the improvement of Washington Square, where changes have been under way for two years. During the past year the walks in and about this square were relaid so as to accommodate the flow of traffic, and at present a gang of laborers and gardeners is at work planting trees and shrubs provided out of the fund of approximately \$6,000 that was raised by the voluntary self-assessment of the owners of property facing the square.

When this work is completed City Forester Pond, who has general supervision of the improvement, says there will have been planted some sixty large trees and eighteen hundred shrubs and plants. The city's appropriation is intended mainly for the erection of a new comfort station, the location and design of which have been a matter of some concern to the surrounding property owners, and soil treatment and additional planting will also be undertaken.

* * *

But a smaller appropriation in the bill, which contains the suggestion of the beginning of a series of like grants and may result in giving the city an entirely new attraction, is contained in an item of \$10,000 for Bartram's Garden. With this sum it is intended to begin during the late summer, and continue through the fall, winter and early spring of 1917, the planting and cultivation of a small botanic garden and arboretum, where rare and interesting plants indigenous to America will be cultivated in the manner that would have pleased the heart of Philadelphia's most noted botanist.

Part of the appropriation will also be used in clearing the swampy area to the south, repairing old walks and adding a few new ones. But out of the sum available, Mr. Pond believes a fairly creditable beginning can be made on a small scale to indicate what the city might do in the creation of a larger and probably more accessible botanic garden.

The largest single item in the pending bill is one of \$38,000 for the improvement of two South Philadelphia parks, one at Twenty-fourth and Jackson streets and the other at Twenty-ninth and Morris streets. But the former park, being below grade and requiring considerable filling, will not be developed during the coming summer, and as the Twenty-ninth street park has not been officially turned over to the Bureau of City Property no plans have as yet been drawn for its improvement. So that the sum, representing nearly a third of the total appropriation, is now being chiefly "ear-marked" for future use.

Other parks that come under the new bill, for sums of from \$2,500 to \$8,000 each, are Independence, Logan, Franklin and Ontario Squares, Connell Park and the small plot at Front and Allen streets. In these parks, as well as in the others included in the bill, and in Clark, Cornelius, Gorgas, Stenton, Rebyburn

and other parks for which work is under way under other appropriation items, a thorough, scientific treatment of the soil is contemplated.

* * *

All of these various improvements considered in connection with the enlarged transit facilities contemplated to suburban and semi-suburban sections presage a period of extraordinary building activity in and about Philadelphia during the coming decade. There will be opened up as the result of these various improvements thousands of acres of practically new territory and row after row of new operative dwellings in addition to buildings of a commercial, industrial and better residential type.

The building outlook is, indeed, one highly encouraging. With money easy, the city's population showing a steady increase, and all sorts of large schemes for improvement and for the beautification and betterment of the city's port and living facilities under way, the next ten years should prove "boom" years in every avenue of the building trades.

THE REASON WHY BLUE PRINTS COST MORE.

Not only has the price of blue print chemicals advanced, but raw stock blue print papers within the last few months have advanced almost 100 per cent.

Paper which could be purchased in normal times for 7 and 8 cents per pound, now costs 12 and 13 cents per pound. Paper which sold for 11 and 13 cents per pound, now costs 20 and 22 cents per pound.

In addition, the labor laws now make it necessary for all blue printers to send messenger boys to school for at least one day each week.

All incidental expenses for supplies, such as wrapping paper, twine and in fact everything entering into the making of a blue print has almost doubled in cost.

And it looks as if the end had not yet been reached.

ARTS AND CRAFTS GUILD EXHIBIT.

The Arts and Crafts Guild, of Eleventh and Locust streets, is holding a very interesting country house exhibit, which consists of furniture, rugs, decorative iron work, stained glass, tiling, pottery, table silver, china, glassware and textiles. Those who are not familiar with what the various arts and crafts movements have accomplished in this country will be astonished at the beauty and technical value and usefulness of all the things that the guild displays.

BUILDING MEN TO MEET.

The National Association of Building Owners and Managers will hold its ninth annual convention in St. Louis on September 12-15.

Miss M. Blackstone (O), 229 South Forty-second street. Thomas (C), 611 South Forty-second street. Cost, 900. Rear addition, 229 South Forty-second street.

BUILDING INCREASE IN APRIL.

Sixty-one Structures Costing \$7,028,700 Go Up in Manhattan During the Month.

Building operations for Manhattan last month showed a considerable increase over the same month a year ago, according to the report by the statistician of the Building Bureau. During the month plans were filed for 61 new structures, to cost a total of \$7,028,700, as against 55 buildings in April, 1915, representing an aggregate cost of \$5,834,740. The increase is six in buildings and \$1,193,960 in the cost of new operations.

Among the 61 new structures were 18 apartment houses, costing \$1,935,000; eight store and loft structures, costing \$1,598,000; 10 private dwellings, costing \$693,200; seven amusement places, to cost \$993,500; one hospital, the Bellevue addition, to cost \$800,000, and four office buildings, costing \$615,500.

ROSES FOR AMATEURS.

Those who wish to plant roses and not bother with them more than to prune and fertilize annually and to keep the ground mellow about the plants should plant hybrid perpetual roses if located in a northern latitude; that is, north of Washington, D. C. The hybrid perpetuals are the most hardy roses and will stand more cold weather than any of the other species. There are many varieties, including the following particularly desirable specimens:

Anne de Diesbach.
Frau Karl Druschki.
George Ahrends.
Mrs. John Laing.
Ulrich Brunner.
Glorie de Chedane Guinoiseau.
Paul Neron.
Capt. Hayward.
Clio.
Eugene Furst.
George Dickson.
Prince Camille de Rohan.
Coquet des Alpes.
Earl of Dufferin.
J. B. Clark.

For sections of the country that are extremely cold it will be well to try some of the hybrid rugosa roses. While they retain the extreme hardness of the rugosa type in size, quality and fragrance the flowers rival some of the hybrid tea varieties, as well as in the constant blooming habit. These should prove of great value to gardeners in our cold Northwest, but Southern gardeners will also experience satisfaction with them. Some of the best are:

Amelie Gravereaux, red.
Blanche Double de Coubert, white.
Conrad F. Meyer, silvery pink.
Hansa, red.
Mme. Lucien Villeminot, pink.
Nova Zembla, flesh white.

Gardeners who consider themselves good gardeners delight in growing hybrid tea roses in the open ground, protecting the plants sufficiently to enable them to withstand the rigors of winter where they may be located. Those who have not tried it should start with a single plant or not more than a few, affording such protection in the autumn as seems necessary. In some gardens the practice is to bend the plants down to the ground and cover them with earth. Others tie them up carefully in straw, the plants remaining in an upright position. This is the general custom around New York City.

Generally on a parallel with Washington, D. C., hybrid tea roses need no winter protection.

The list of hybrid tea roses is too long to enumerate here. The last one seen always seems to be the most beautiful. Grow as many as possible.—New York "Sun."

ANCHOR POST FENCES

are not the ordinary kind—they are fences of heavy galvanized netting erected on Anchor Posts—posts which won't sag or get out of line, and are galvanized both above and below ground to prevent rust.

In addition to fences and iron railings and gates of every kind we make tennis court, chicken-run and kennel-yard enclosures.

Exhibition Department Of the Master Builders' Exchange

18 South 7th Street, Philadelphia

Is open to the public every day except Legal Holidays and Sundays.

If you are manufacturing or handling anything pertaining to the construction or completion of a building, and you do not have it in the EXHIBITION DEPARTMENT of the BUILDERS' EXCHANGE, you should get it there AT ONCE, for that is where the people come to look for such things.

Building Materials and Appliances are there to be seen, and special care is given to explaining the merits and uses, and giving all information required.

The first Liquid Filler made and the best, answering every requirement of Nice Standard.

NICE
TRADE MARK REG. U.S.A.

Wood Fillers are the trade's standbys. You can shoot at them from any standpoint without making any impression.

They are economical in time, labor, material; and produce wonderful results. In addition they are indispensable to every painter and finisher because of their adaptability to other uses.

A postal will bring you samples and catalogue free.

Residence, Atlantic City, N. J., \$3,000. Architect, W. S. Hewitt, Guarantee Trust Building, Atlantic City. Owner, Chas. Naplan, 319 Heed Building, Philadelphia. Brick, 3 stories, 32x88 feet, slag roof, hot water heating, gas lighting. Owner is taking bids.

Cottage, Stone Harbor, N. J. Architect, Henry L. Reinhold, Jr., 1309 Walnut street, Philadelphia. Owner, Mrs. S. K. Boniface, Stone Harbor, N. J. Frame and stucco, 2 stories, 18x38 feet, shingle roof. Owner will take bids.

SPECIALIZED MEDIA FOR SPECIALIZED THINGS.

It must be evident to any thinking man that the place to advertise commodities or appliances special to any given industry is in the publications that reach that industry and that such advertising, if well written, well displayed and persistently kept up, will not only effect the desired sales, but will build up a permanent good-will asset of inestimable value. . . . —R. R. Shuman, in "Standard Advertising."

Editorial Comment

On the north shore of Long Island, about four miles beyond the line of New York City, there is to be planted a home colony that is expected to be in many ways unique.

The promoters, to begin with, are all of them men affiliated with the arts—sculptors, painters, architects, illustrators and mural decorators of national repute, such men as Frederick MacMonnies, Robert Aitken, Paul W. Bartlett, Thomas Hastings, Jules Guerin, Owen Brainard, Penrhyn Stanlaws, Walter Russell, Edwin Blashfield and J. Alden Weir.

These men have associated with them a committee of financiers, have purchased some 186 acres of choice land fronting Manhasset Bay, have formed a company to be known as The Dominion of Versailles, and propose to lay out on the ground thus acquired one of the most elaborate and beautiful schemes of colony planning ever attempted in America.

"On July 15," said Walter Russell in discussing the project, "the engineering work will begin. Construction of the actual buildings will not be under way until fall."

Carrere & Hastings have made the designs for a colossal group of buildings almost as imposing as an international exposition in size. The ground rises from the shore of Manhasset Bay to wooded hills nearly 100 feet in height, about 1,000 yards from the water's edge.

All this space is to be laid out in formal gardens and parks like the famous gardens of Versailles, which the greatest of French gardeners, Vaux, created for "le Grand Monarch," Louis XIV, the richest and most magnificent King of France that ever lived.

The crest of the hill about half a mile from the water is to be crowned by a club house with ball rooms, dining rooms, restaurants that will seat comfortably 2,000 persons, tea rooms, swimming pools, squash courts, and all the other comforts and luxuries of the best modern club houses or hotels.

* * *

All the cottages and private gardens of the Dominion will be laid out as separate, harmonious units of the whole scheme of architecture and landscape gardening, so that from whatever point the colony is seen, whether from Manhasset Bay, the terraces of the club house, the porches of the individual cottages, or the windows of any of the private residences, the sweeping view will be one of harmony and symmetry and inspiring beauty.

The grounds of the Dominion of Versailles, as it is called, are about 180 acres in extent. The natural beauty of the location is pronounced far superior to that of the French Versailles. The chateau of Louis XIV stands on a level plain. The land on which the new Versailles is to be built slopes gently upward from the sound to a plateau about 150 feet above the water. The main building will be

erected on the summit of this elevation, the highest portion of the grounds. It will not be a copy of the Chateau de Versailles in France, but an American adaptation of it. The aim will be to retain all the stately splendor and beauty of the ancient structure and the lessons of the past will be applied to the needs and conditions of the present.

It is planned to make the gardens of this new Versailles even more beautiful than those which surround the famous palace of Louis XIV. Their layout follows to a certain extent the natural formation of the ground and is divided into three main parts. The first is that which lies between the waterfront and the public road which crosses the property. In this will be the approach to the club houses and a large playground for children, at the lower end of which will be a big swimming pool.

* * *

The chateau will be just half a mile distant from the waterfront. It will be 1,200 feet in length, or nearly equal to the extent of five north and south blocks in New York City.

The exterior has been designed both in relation to its appearance from the gardens and its effect when viewed from a distance. This idea will be carried out in making the long front portions of the building comparatively low and quite simple, keeping the spirit of the old chateau of Versailles, while the rear portion will be higher, culminating in two towers, each about 375 feet in height. In the lower portions of the chateau the average height will be eight stories; elsewhere, exclusive of the towers, the average will be sixteen stories.

The great entrance hall will be the first striking feature on entering the chateau. Two splendid stairways will lead from this. One, the "king's stairway," as it is called in old Versailles, will be monumental in its sweep and breadth and will lead to the second floor. The other will descend to the grand ballroom, which will occupy the central court of the building.

* * *

This American Versailles is intended to combine the exclusiveness and privacy of a home with the pleasures and advantages of social life. It will be town and country in one, with none of the discomforts and annoyances of either. The Dominion of Versailles will contain the comforts and luxuries of modern life that even a king could not buy in the days of Louis XIV. It will be the most regal thing in America, but one need not be a king or a millionaire to live there, its promoters say.

There will be a club house and other facilities for entertainment exclusively for the use of employees of Versailles. Persons living in the chateau may have their own servants

or they can employ such as they wish at any time, for an hour or a day or a week, from the regular staff that will be maintained for that purpose.

At the waterfront, facing a great green mall, will be the buildings of the Versailles Club. The two sections will average about four stories in height and will contain about 1,000 rooms in suites of parlor, bedroom and bath for the use of club members and their families. The club will be like an exclusive family hotel and the club members will enjoy practically the same privileges as the owners of space in the chateau itself.

Among the other buildings which are part of the general plan of the Dominion of Versailles are a casino and a yacht clubhouse. An artificial harbor will be constructed. At the ends of the breakwaters will be triumphal columns. The bathing beach will be inside these breakwaters, with facilities for sea bathing at night by means of under water illumination.

The architecture of the Versailles Club, the casino and the yacht club will harmonize in design and will recall that of the Petit Trianon.

* * *

Sounds like a dream culled from the Arabian Nights, doesn't it?

But listen to one of the foremost of American architects, Mr. Thomas Hastings, who is to do the designing and who is one of the principals in the enterprise.

* * *

Thomas Hastings, of Carrere & Hastings, said:

"Versailles is the biggest thing I have ever undertaken. There is nothing that I know of that is so big. When anything like this has been done before it has been done for royalty. This is a home—a combination of a lot of individual homes.

"I expect Versailles to be the greatest work of my career. It is the most interesting thing I have ever had to do. It is like the Prix de Rome, with the added interest that it is going to be executed.

"If the Chateau of this American Versailles is not the biggest thing in the world, it will be the biggest architectural feature or mass in America. To answer its splendid purpose it must be something between a great building and a small town. It must harmonize with the country and country life and be thoroughly homelike in character. From the architect's point of view it is an entirely new and modern problem.

"To illustrate my meaning, let me say that the average American town is forlorn, because it is scattered all over in spots that have no relation to each other. The effect is not beautiful. There is no landscape and no town. In Versailles we shall concentrate the town—as the great chateau might be called—and have plenty of room for country landscape, as in ancient and beautiful towns of Southern and Eastern Europe.

"The land where Versailles is to be built lends itself to the solution of the problem bet-

ter than any other location that I know of near New York. To my mind, Versailles is as much a study of real architectural landscape as of architecture. The chateau will be a beautiful structure that will fit into a beautiful environment.

"While at the beginning I was awed by the size and splendor of the project, the more I studied and the more I looked into possibilities of financing it the more I became convinced that it was practical and possible.

"My architectural conception of Versailles is not as a hotel, or apartment house on a vast scale. It is a place where a man can have the quiet and seclusion of his own country home surrounded by an infinitely greater amount of beauty and variety of landscape than would be possible in any other way. Versailles will be an ideal combination of convenience and beauty—the country at the door of the town. There is nothing like it in all the world."

* * *

Owen Brainard, of Carrere & Hastings, has charge of all the engineering work. Frederick MacMonnies, Paul Bartlett and Robert Aitken, sculptors, will create the three largest fountains. They will also act as the committee in control of the many sculptural features. J. Alden Weir, president of the National Academy; Edwin H. Blashfield, Frank V. Dumond, Maxfield Parrish and Jules Guerin will have charge of all mural and interior decorations.

Plans and pictures of this American Versailles are now on exhibition at the National Academy of Design, No. 215 West Fifty-seventh street, New York City.

* * *

Frederick MacMonnies declared Versailles will mean a new birth of art in America. He said:

"It will be the one great demonstration here of the true spirit and real love of art. Americans who have traveled abroad with unseeing eyes have an idea that art is something that should be kept for people to look at on Sundays and holidays. They have no knowledge of its application.

"Versailles will give them a knowledge of the application of art to the needs of everyday life."

Paul Bartlett said:

"The creators of this great enterprise are actually accomplishing, as business men, the things that Louis XIV did as a king. But they are doing it through the culmination of co-operation, which is greater than kingly power. Every century has developed a beauty of its own. The new Versailles will be the greatest milestone in American art."

* * *

So that the new Versailles, it will be seen, is not a dream, but a practical twentieth century actuality, pregnant with big things for the future of American art and backed by men in every way competent to endow it with the beauty that should go hand in hand with a project of such extraordinary magnitude and magnificence.

TRADE NEWS AND GOSSIP.

**The New Jersey Master Plumbers' Association will hold its annual convention at Columbus Institute Hall, Newark, N. J., May 22-24, inclusive. Plans are under way for an interesting exhibition of plumbing fixtures and appliances to be held in connection with the convention.

**Colby & Christie, consulting engineers, Witherspoon Building, Philadelphia, Pa., have discontinued their New York office at 165 Broadway.

**The National Electrical Contractors' Association of the United States will hold its annual convention at the Hotel McAlpin, New York, July 18-22. Secretary, G. W. Duffield, 41 Martin Building, Utica, N. Y.

**Clarence L. Sefert, architect, has recently moved his offices from 110 West Fortieth street to 2010 Broadway, New York City.

**The National Housing Association will hold the next housing conference at Providence, R. I., October 9-10-11, 1916.

**Duncan Candler, architect, has moved his offices from 105 West Fortieth street to 753 Fifth avenue, New York City.

**G. E. Krug, architect, has moved his offices from 320 Fifth avenue, Manhattan, to East Orange, N. J.

**The National Association of Master Plumbers will hold its annual convention at Atlantic City, N. J., June 22-24. The headquarters will be at the Hotel Breakers. The program for this convention will be announced later.

**D. Everett Waid, architect, has moved his offices from the third to the twenty-second floor of the Metropolitan Building, New York.

**Scopes & Feustman, architects, have moved their New York office from 37 East Twenty-eighth street to 15-17 West Thirty-eighth street, Manhattan.

**Patterson & Dula, architects, have moved their offices from the Anderson Studios Building, 15 East Fortieth street, to 527 Fifth avenue, New York.

**Werner & Windolph, architects, formerly located at 27 West Thirty-third street, are now occupying larger quarters at 25 West Thirty-third street, New York.

**W. L. Barnhart, sales representative for the White-Steel Sanitary Furniture Company, has moved his office from 101 Park avenue to 507 Fifth avenue, New York.

**The National Warm Air Heating and Ventilating Association will hold its annual convention at Detroit, Mich., June 14.

BUILDING CONSTRUCTION

1215 Filbert Street

Philadelphia

Riches can secure no better illuminant than Electric Light for the mansion, yet our rates are so low that every home—even the most modest—can afford it. Electric Light is the brightest, cleanest, most convenient and hygienic light, as well as the most economical.

If your house is not wired for Electricity, ask us for the details of our deferred payment housewiring plan.

ALTERATIONS AND ADDITIONS.

(Continued from page 335.)

Cost, \$1,500. Wagon shed, brick, 1 story, 85x30 feet, slag roof, northeast corner Sixty-second and Noble streets.

Penna. R. R. Co. (O and C), Broad Street Station. Cost, \$2,900. Engine house, office extension, 2-story addition, brick, 12x49.9½ feet, 24.9 feet high, Pennsylvania R.R., west side of Thirtieth street, north of Race street.

J. F. Lewis (O), 1914 Spruce street. Wilbert A. Springer (C), 1624 Latimer street. Cost, \$1,400. Brick, 1 story and basement addition, 8x12 feet, concrete roof, 1914 Spruce street.

Samuel Taylor (O), 2371 East Cumberland street. D. O. Killey (C), 2046 East Orleans street. Cost, \$400. Brick kitchen, one story, 13x12 feet, slag roof, 2909 Frankford avenue.

Max Sachmoff (O), 1956 Dalkerth street. Harry Slass (C), 1809 North Seventh street. Cost, \$650. Brick kitchen, one story, 16x10 feet, tin roof, 1956 Dalkerth street.

A. F. Winkle (O), Holley and Brown streets. Anthony Gallagher (C), 3706 Haverford avenue. Cost, \$700. Garage, brick, 16.2x58.4 feet, 1 story, slag roof, Northeast corner Holley and Brown streets.

C. Lakowiz (O and C), 2018 Orthodox street. Cost, \$1,200. Dwelling, 2 stories addition, 16x40 feet, 23 feet high, slag roof, and general alterations (interior), 2015 Orthodox st.

Hon. Judge Crane (O), Sixty-second and Nassau road. Ketcham & McQuade (C), 1029 Brown street. Cost, \$500. Garage, brick and stone, 1 story, 11½x18½ feet, Sixty-second and Nassau road, Overbrook, Pa.

First Roumania Congr. (O), 754 South Third street. Nathan Lehrman (C), 920 Walf st. Cost, \$5,000. Brick fire tower, 3 stories, 10x16 feet, 754 South Third street.

Fitzmoris Bros. (O), 2005 Bainbridge st. Robert G. Ward (C), 633 North Sixty-third street. Cost, \$845. Kitchen and bath, brick, 1 story, rear addition, 12.9x12.6 feet, and 2 stories rear addition, 8x12.6 feet, slag roof, 2005 Bambridge street.

F. Miller (O), 2422 Howard street. Robert Irwin King (O), 409 West Price street. John Dear (C), 4544 Greene street, Gtn. Cost, \$3,000. Dwelling, brick, interior and ex-

terior alterations in general, rebuild porch and chimneys, reshingle roof and etc., 217 W. Walnut lane.

Jno. Pyne (O), 5206 Woodland avenue. W. L. Frame (C), 835 Holly street. Cost, \$1100. store and dwelling, general alterations, 5206 Woodland avenue.

M. Rosen (O), 831 South Third street. Samuel Strogin (C), 313 Cantrell street. Cost, \$500. First and second rear addition, brick, 14x15 feet and cellar, 831 South Third street. Brown (C), 278 Walnut street. Cost, \$400. Garage, 1 story, brick, 18x28 feet, 2421 E. Waterloo street.

Mrs. F. Malemonnt (O), Sixty-third and Wheeler street. Cox & McNally (C), Eighty-first and Holstein avenue. Cost, \$1,000. Dwelling, 2-story rear addition, 16x10 feet, with cellar, slag roof, northeast corner Sixty-third and Wheeler streets.

Estate of Benj. Harper (O), 133 S. Twelfth street. Alfred Stehli (C), Wyoming avenue, west of Front street. Cost, \$500. Stable, fire repairs, Rising Sun avenue above Wingo-hocking street.

Morris Sinopky (O), 4425 Main street. Friend Scargill (C), N. Manayunk. Cost, \$300. Garage, brick, 14x18 feet, 2 stories, slag roof, Main and Carson streets, Manayunk.

Moores Est. (O), south side Overbrook avenue, east Seventieth street. Alfred James (C), Bala. Cost, \$800. Garage, hollow tile, 13.4x21.4 feet, shingle roof, 1 story, south side Overbrook avenue, east Seventieth street.

Frank Busche (O), southeast corner Leithgow and Susquehanna avenue. Jacob Gaertner (C), 2214 North Third street. Cost, \$2,500. Second story rear addition, brick, 15x25 feet, northeast corner Leithgow and Susquehanna avenue.

Messrs. LaRue (O), 67 East Mermaid lane. Jno. McCoy (C), 1215 Summer street. Cost, \$2,000. Dwelling, brick, second story rear addition, 19x27 feet, with cellar, tin roof, 67 E. Mermaid lane, Chestnut Hill.

Phila. Yeast Mfg. Co. (O), Thirty-first and Jefferson streets. A. Raymond Raff Const. Co. (C), 1635 Thompson street. Cost, \$2,000. General repair floor and roof, no additions, northeast corner Thirty-first and Jefferson streets.

Albert P. Hart (O), 1438 North Fifteenth street. J. Y. Loux (C), 1121 Rising Sun lane. Cost, \$1,600. Brick, 1-story kitchen, 10x11 feet, porch on second and third floors, 10x14 feet and 5x6 feet, and general alterations, 1432 North Fifteenth street.

Phila. Union Stock Yards Co. (O), Thirtieth and Master streets. F. W. Van Loon (C), Denckla Building. Cost, \$10,000. Loading platform, open shed, 45x280 feet, southeast corner Thirtieth and Walnut streets.

Emil Veit (O), 1821 East Tioga street. Arthur V. Turner (C), 6328 North Camac street. Cost, \$725. Garage, frame, 13x20 feet, 1 story, southwest corner Twelfth and Chelton avenue.

Francis Rosie (O and C), 4406 Leiper street. Cost, \$400. Dwelling, 1 story, brick, addition in front, 15x12 feet, and addition in rear, 15x15 feet, slag roof, 4406 Leiper street.

Chas. W. Shelmire (O), Germantown avenue and Lehigh avenue. H. P. Werner (C), 3245 Germantown avenue. Cost, \$1,000. Store, general alterations, 2647 Germantown avenue.

Chas. Hardenbrook (O), 6742 North Fifteenth street. Clinton L. Hemmerly (C), Oak Lane. Cost, \$1,000. Garage, brick, 11x20 feet, addition to rear of garage, 6742 North Thirteenth street.

Herman Bamford (O and C), 6930 Tulip street. Store and dwelling, brick, second-story addition, 16.4x60 feet; 1-story rear addition, 13.6x19.6 feet, and interior alterations, north side Longshore street, 20 feet W. Vandyke street.

C. Zimmerman (O), 2070 Chelton avenue. J. H. Goodwin (C), 1325 E. Haines street. Cost, \$400. Dwelling and store, brick, 1-story rear addition, 16x20 feet, with cellar, gravel roof, 2070 E. Chelton avenue.

E. Trainer (O), 820 S. Second street. A. Donaldson, Jr. (C), 2237 Oakford street. Cost, \$500. Store and dwelling, interior alterations, southwest corner Eighth and Fitzwater sts.

M. Somerson (O), 2030 Ridge avenue. Modern Const. Co. (C), 523 Lafayette Building. Cost, \$1,000. Store and dwelling, brick, 1-story addition, 6x12.6 feet, slag roof, 2030 Ridge avenue.

Jas. J. McArdle (O), 544 W. Horter street. E. Carmel (C), 332 Queen lane. Cost, \$1,000. Dwelling, brick, build second-story porch, 19x16 feet, 544 Horter street.

J. G. Klemm (O), Villa Nova, Pa. F. B. Davis (C), 240 North Sixteenth street. Cost, \$600. Store, brick, general alterations, 1923-52 Market street.

Geo. A. Nahm (O), 2736 Girard avenue. H. T. Campbell (C), 1222 North Twenty-ninth street. Cost, \$800. Dwelling, brick, hot water heating system, 2824 Girard avenue.

J. E. Brennehan (O and C), 4303 Spruce street. Cost, \$1,800. Dwelling, brick, build third-story, 14x34 feet, tin roof, 4303 Spruce street.

Chas. Rosenberg (O), northeast corner Twenty-eighth and Walnut streets. Wm. R. Dougherty (C), 1610 Sansom street. Cost, \$3,800. Garage, 38.4½x54 feet, brick, 2709-11-13 Wharton street.

Jno. Bradley (O), 4527 Lancaster avenue. Warren E. Biscoe (C), 3954 Ludlow street. Cost, \$2,800. Garage, brick, 50x68 feet, slag roof, 4527 Lancaster avenue.

Dinis Calaham (O), 2654 Cedar street. Joseph A. Wolf (C), 2306 E. Lehigh avenue. Cost, \$2,600. Garage, brick, 1 story, 16x100 feet addition, 2413 Huntingdon street.

Ernest R. Webster (O), 5521 Boyer street. Jno. Bateman (C), 8 Locust street, Gtn. Cost, \$750. Garage, brick, 17.10x35.8 feet, slag roof, 5521 Boyer street, Germantown.

Frank Schillings (O and C), 220 Northeast Boulevard. Cost, \$2,400. Six garages, brick, each 15.5x18 feet, slag roofs, 143 feet West of Masher street, 134 feet south of Northeast Boulevard, on a private street 24 feet wide.

Jno. Dobson Est. (O), 809 Chestnut street. H. R. Rust (C), 19 South Eighth street. Cost, \$1,800. Store, brick, general interior alterations, erect stairway, 837 Market street.

W. S. Stevenson (O), 6332 Drexel road. M. W. Young (C), Overbrook. Cost, \$1,800. Garage, 1 story, 16x23 feet, slate roof, southeast corner Sixty-sixth and Overbrook avenue.

S. W. Sargeht (O), 6472 Overbrook avenue. M. W. Young (C), Overbrook. Cost, \$1,500. Garage, brick, 21x23 feet, slag roof, southeast corner Sixty-sixth and Overbrook avenue.

Herbert Appleyard (O and C), 2213 North Eighth street. Cost, \$500. Dwelling, brick, 14x44 feet, slag roof, making bungalow, west side State road, 307 feet north Linden ave.

F. Nardy (O and C), 1220 Fitzwater street. Cost, \$7,750. Garage, brick, 86x113 feet, 2 inch plank roof, 3438 Ludlow street.

The world is just chock full of men who failed because they expected buyers to romp right in and ask for goods. Modern business spends big money simply to get the buyer interested knowing that sales follow.

The "Builders' Guide" is the OLDEST, and the ONLY Architectural Publication in Pennsylvania.

THE STEWARDSON PARTY AND TWENTY-SECOND ANNUAL EXHIBITION OF PHILADELPHIA CHAPTER, A. I. of A., AND THE T-SQUARE CLUB

The annual Stewardson Party given by the president and members of the Philadelphia Chapter of the American Institute of Architects was held on Saturday night at the Art Club. Horace W. Sellers, president of the Philadelphia Chapter, presided. The function brings together the junior architects of the city and the older members of the institute. Among those on the committee were E. Perot Bissell, George Howard Bickley, Edmund B. Gilchrist, Donald M. Kirkpatrick, Arthur I. Meigs, H. B. Register, George Howe and Louis De Lone. An exhibition of the work of the T-Square Club and the junior organization was shown.

The party has been established in memory of John Stewardson, whose efforts resulted in a congenial relationship between the architects and their draughtsmen. It consists of a reception by the practicing architects of the city to the architectural students and draughtsmen.

The exhibition while not a large one, was most comprehensive and showed work of a high degree of excellence. It included original drawings, models and enlarged photographs of executed and proposed work, illustrative of structural, decorative and landscape architecture; also sketches and paintings of decorative subjects and executed work in the applied arts.

Of great local interest was shown the model of the proposed development of the east bank of the Schuylkill River, between the Sedgley Club and the Girard avenue bridge. The model is a most pretentious piece of work, about 15 feet in length, made under the direction of Edgar V. Seeler, architect, and Charles Grafly, sculptor.

Of further interest is the work of Day & Klauder showing fine examples of college buildings, designed for Wellesley College and Cornell University. These buildings strike a new note in this type, and the skill with which they are designed shows the touch of a master hand. Coming from the same office is a sketch of a well designed Christian Science Church.

The winning designs for the Carson College for Girls by Albert Kelsey and the accepted design for the Camden High School are also on exhibition.

A large photograph of the Curtis Building and the Penn Mutual Building shows two fine examples of the executed work of Edgar V. Seeler. This same architect exhibits the well designed residence of James Laughlin, erected at Zellewood.

Other interesting work done by architects in this city are the designs for the entrance to Schenley Park, Pittsburgh, Pa., by Horace

Wells Sellers and H. Bartol Register. Also a church and church home at Oakbourne by Walter H. Thomas.

Also some very fine examples of domestic architecture is shown in the residence work of Duhring, Okie & Ziegler, Wilson, Eyre & McIlvaine, Lawrence Visscher Boyd, Brockie & Hastings, George Howe, Charles Willing, J. P. Sims, Edmund Gilchrist, John Graham, Jr., Martin & Kirkpatrick, Robert R. Goodwin, Mellor & Meigs.

Other local works of interest are the drawings of the motor speedway by Heacock & Hokanson, a well executed design of the Cooper Branch Library at Camden, by Karcher & Smith, and St. Matthew's Catholic Church, by George I. Lovatt.

The exhibit from the Architectural School of the University of Pennsylvania shows as usual specimens of well trained students and some of the archeology problems rank, from the standpoint of draughtsmanship, with the best work in the exhibition.

From out of town, and perhaps the best work on exhibition are the masterly designs submitted by Cass Gilbert, of New York, including a wonderful perspective drawing and design of the Detroit Library, a competitive drawing for the Scott Memorial Library and a perspective drawing of a New York bridge.

The work of Bertram Grosvenor Goodhue is well up among the best on the walls, and includes a well executed and cleverly handled perspective of Grace Church, New York. A house at Pasadena, Cal., also showed the skill of this well-known architect.

John V. Van Pelt's winning design for the base of the Joan of Arc statue is also on exhibition. George B. Post & Son, of New York, sent a perspective of the Hotel Statler, of Detroit.

The drawing of the Franklin Bank Building, by McKim, Mead & White and Furness-Evans & Co., is also among the exhibits. Other work from out of town includes the academic work from Carnegie Institute, Pittsburgh; the Colony Club, by Delan & Aldrich, New York; a house at Los Angeles, Cal., by Maron Hunt; a most pretentious residence for H. H. Rogers, South Hampton, L. I., by Walker & Gillette, of New York, and many other designs by well-known architects.

The stained glass by Nicola D'Ascenzo, the wrought iron work by Samuel Yellin and the tile work by the Enfield Potteries show the degree of perfection to which the executed work can be carried and add much to the interest of the exhibition.

Don't lose your grip. Noah was 600 years old before he knew how to build an ark.

CERTIFIED BUILDINGS.

The unification of the various municipal departments now charged with the inspection of buildings in this city (New York) will have one desirable effect that has scarcely been referred to in the considerations that have been given to the pending legislation, and that is the effect of the new system of building inspection upon the marketability of a building. When an owner has completed his building in accordance with the standardized regulations which will go into effect next October under the new law, he will receive from the Superintendent of Buildings having jurisdiction a certificate of occupancy, or, in other words, a certificate of character for his building.

This will be the equivalent of a legal notice to the world, and especially to an intending purchaser, that the building has been erected according to all the laws and regulations governing the classification to which it belongs, that there are no violation orders pending against it anywhere, and that so long as it is kept in good repair and used only for the purposes for which it was designed, the owner will not be required to alter its structural parts or make improvements of any sort against his will.

More than that, the building will not only be correct in its structural plan, construction and equipment, but it will have complied with the forthcoming regulations governing the height and situation of buildings. If it be a business structure, it will have been restricted to a certain district in the city appropriate to the trade or industry which it is designed to serve. It will not have been permitted to intrude where it is unwelcome, or where it will not be useable and rentable to the best advantage.

The district where it will be situated will not be subject to a sudden wholesale recession of realty values in consequence of being deserted through the migratory flight of a volatile industry, or, on the other hand, in consequence of an incursion of incongruous buildings and trades. One of the principal elements in property value is security of investment based upon the permanency of the good character of a neighborhood, and there is no security where there is no guarantee of reasonable permanency. The new districting regulations will be an effective prohibition against stagnant pools of obsolescent buildings with their concomitant of moribund land values.

The owner who has built under the standardized laws and regulations will possess, in a word, a certified building, one which an investor will be perfectly safe in buying, so far as its structural qualities are concerned, one which will be insurable at the lowest rate, and rentable on a schedule that will produce the best possible return on the investment. It will be a building for which the maximum loan will be obtainable, and which will amortize the mortgage, or pay for itself entirely, within a minimum period.

This consolidation and standardization of

INDEPENDENT PRINTING COMPANIES OF U. S. - Washington, D. C.

administration and regulations, when fully understood, will be viewed as the greatest step in advance that has ever been taken in behalf of realty interests. It will do more to restore the popularity of property ownership and real estate investments in all its forms than any benefit that has been conferred in years. It is hoped, however, that there will be no misunderstanding over the appointment of the board of standards and appeals. Care should be taken to preserve the technical character which the board has possessed from its inception, separate and distinct from all political ends.—New York "Real Estate Record."

The man who is "going to do some advertising next year—maybe" gets his advertising in the end in the shape of an obituary.

THE "IOWA CITY" PLAN OF BIDDING

No current item of news has had wider circulation in the architectural press of the country, or received more comment, than the recent letting of a contract on an \$80,000 bridge to a man who bid \$500 lower than the lowest bid."

The contract was awarded by the City Council of Iowa City, Iowa, to William Harrabin, of that city. The lowest bid was submitted by the Widell Construction Company, of Mankato, Minn., which bid \$77,900, and the award was contested by former Governor Eberhard, of Minnesota, secretary of the company; but the City Council stood pat. The legality of the bid is being discussed from coast to coast.

Sanders Shanks, secretary of The Bond Buyer, New York City, writing in "Municipal Engineering," cites an analogous case which arose at Cumberland, Md., where a bond house in addition to its regular bid, made an alternative offer, agreeing to pay \$1.00 per bond more than any other bid or combination of bids on paying bonds to the amount of \$150,000. This bid was accepted by the city over the protest of the other bidders, but a taxpayers' suit was brought by Henry Shriver to enjoin the delivery of the bonds. The suit was upheld by Judge Henderson, of Cumberland, and a permanent injunction issued against the delivery of the bonds. The Maryland case would be a precedent if any action is brought in Iowa.

It is also cited that the paving law of Illi-

nois provides that after bids are opened any contractor may offer to do the work for ten per cent. less than the lowest bid and take the contract. The difference between the two cases is that in Illinois the contractor knows what to expect, which is not the case where the law is not specifically stated.

Leaving aside all question of legality, it is quite patent that the "Iowa City plan" of bidding cannot have any permanent recognition even though the contract in question is carried out. It is true the Iowa City contractor discovered a marvelous method of insuring himself the award at no loss to himself by deducting from his imaginary contract price a figure which included the cost of estimating, and all the costly preliminaries to submitting a bid, to which he was not put. He graciously left the estimating to his fellow contractors and took no more chance that they would make a mistake than that he would make a mistake and bid too low, should he have submitted a bid. That one contractor can continue to secure work on his competitors' estimates does not appeal to logic, nor is it reasonable to suppose that construction companies will continue to employ high-salaried estimators when their efforts are only used to play into the hands of their competitors, who spend neither time nor trouble on this detail. The next step beyond that is chaos in the contracting business. The present system of competitive bidding may be costly, wasteful and extravagant, but the "Iowa City plan" does not seem to be the solution for it.

Whatever the outcome of his contract, however, Mr. Harrabin may rest in the assurance that he has furnished mental exhilaration for the architectural editors of the country and has added his contribution to the gayety of nations for some time to come.—"Ohio Architect."

For every "one" man you can mention who has succeeded without advertising we'll agree to name ten whose greater success has been due to advertising "direct." Moral Advertise!

Lots of men don't advertise because they cherish an idea it's too expensive. As a matter of fact, it's the cheapest good investment a man can put his money in, as hundreds of successful men have learned.

**The chap who bags the glittering prize
Is the fellow who learns to advertise**

REAL GOLD UNMINED.

"I am here as the self-appointed representative of 900 trade and technical publications printed in the United States and circulated wherever the English language is spoken. How important they are in their relation to advertising may be understood when I tell you that they carry, in the aggregate, advertising to the amount of at least \$25,000,000 a year—one-eighth of all the advertising money that is spent for all forms of publicity in the country—and that these advertisers "stick" year after year because it pays them to stick.

I have bought, sold and written all kinds of advertising—pasted and printed, indoor and outdoor, consumer and dealer, technical and commercial—and I have reached the conclusion that there is more real gold as yet unmined in the trade press field than in any other field of advertising endeavor."—Extract from address by R. R. Shuman, before the annual convention of the Associated Advertising Clubs at Omaha.

Few persons appreciate the enormous cost of advertising a popular product before it obtains popularity. One of the most successful advertisers in the country, whose income reaches hundreds of thousands of dollars annually, told *Leslie's Weekly* that he wasted at least a quarter of a million dollars "before he learned the advertising game." He estimates that he spent this amount on circulars, gaudy lithographs, sign boards, and street car advertising, out of which he received so little benefit, as far as he could trace it, that he regarded the expenditure as money pretty nearly wasted

The darkest hour in any man's life is when he sits down to plan how to get money without earning it.—Horace Greely.

PLACE AND VALUE OF THE TRADE PAPER.

"Eloquent speakers who have preceded me have told of the greatness of our American industries, and have rightly given to advertising a large measure of credit for our industrial and commercial supremacy.

They have spoken of the daily and weekly newspapers, the agricultural press, the magazines, the billboards, the street cars, and even the advertising novelties, as the forces that have played an important part in this wonderful upbuilding, but they have wholly missed the greatest force of them all—the trade and technical press of the country."—R. R. Shuman before the annual convention of the Associated Advertising Clubs at Omaha.

ANCHOR POST FENCES

are not the ordinary kind—they are fences of heavy galvanized netting erected on Anchor Posts—posts which won't sag or get out of line, and are galvanized both above and below ground to prevent rust.

In addition to fences and iron railings and gates of every kind we make tennis court, chicken-run and kennel-yard enclosures.

Master Builders' Exchange

18 South 7th Street, Philadelphia

Is open to the public every day except Legal Holidays and Sundays.

If you are manufacturing or handling anything pertaining to the construction or completion of a building, and you do not have it in the EXHIBITION DEPARTMENT of the BUILDERS' EXCHANGE, you should get it there AT ONCE, for that is where the people come to look for such things.

Building Materials and Appliances are there to be seen, and special care is given to explaining the merits and uses, and giving all information required.

Liquid Filler

The first Liquid Filler made and the best, answering every requirement of Nice Standard.

TRADE MARK **NICE** REG. U.S.A.

Wood Fillers are the trade's stand-bys. You can shoot at them from any standpoint without making any impression.

They are economical in time, labor, material; and produce wonderful results. In addition they are indispensable to every painter and finisher because of their adaptability to other uses.

A postal will bring you samples and catalogue free.

Labor means morality. The man who must work hard for a living has no time to run after other men's wives nor to constitute himself a receptacle for highballs. Only the laborers are religious. Leisure has ever been fatal to worship. It is useless to preach salvation to idle people. Remember the camel and the needle's eye.—"Onlooker."

NEW JERSEY Contracts Awarded

Residence, Princeton, N. J., \$5,000. Architect, H. A. Hill, 40 E. State street, Trenton, N. J. Owner, Prof. Max F. Blau, 27 Bank Place, Princeton, N. J. Frame, 2 stories, 26x40 feet, shingle roof, hot water heating, electric lighting. Contract awarded to Valentine Frohling, Princeton, N. J.

Editorial Comment

The Philadelphia papers devoted space, on Sunday last, to laudatory notices of the Philadelphia Art Alliance, a new organization, the primary object of which seems to be the advancement of Philadelphia as an art center.

"Just what the Philadelphia Art Alliance means to Philadelphia when once it has become a more established organization is a question that is now uppermost in artistic circles in this city," runs one of these notices. "Many cities interested in the project are sending inquiries regarding the movement, which has become one of national interest, and with the completion of the plans under way, Philadelphia will undoubtedly be recognized as the art centre of America."

"Many cities, such as New York, Chicago, and other representative communities, have taken hold of the idea, and have been working at it from different angles, but none has arrived at the point of co-operation that has developed here. In a nutshell, the Philadelphia Art Alliance is an organization that has been formed by the city's most representative citizens to provide an art centre, or market place, for works of art to meet the needs of the community."

Very good. A little further on in the article we learn that:

"A large site on Rittenhouse Square is the proposed location where a beautiful and modern building will be erected, equipped to aid artists in their various lines of work. This will do away with commercial agencies, it is hoped. The building, which is being planned by a firm of Boston architects, will contain a modern art theatre, a foyer, art gallery, auditoriums, rehearsal and lecture rooms, restaurant and club rooms for the use of members, a roof garden, accommodations for the organizations allied with it, and, in fact, secure to all those interested in music, drama, literature, painting, sculpture or the allied arts, better provision for them on a self-supporting basis."

Again very good. But, why "a firm of Boston architects"?

Why, in a city as deservedly famous as Philadelphia for the skill and originality of its architectural designers, why call in "a firm of Boston architects"?

If the object of the Alliance is to assist the development of Philadelphia as an art center, by what process of reasoning did its promoters arrive at the decision to have the home of the Alliance designed elsewhere?

Why not a firm of Philadelphia architects? Why Bostonize right at the start what is apparently intended to be a Philadelphia proposition exclusively?

* * *

The tendency of the factory builder to disregard the architectural graces for the purely utilitarian side of his project is not a new

one. Complaint has been more than once heard to the stark, bare, box-like structures going up here and there over the country under the name of industrial buildings. The average hard-headed owner seems to be utterly unable to grasp the fact that a factory building can be made attractive without material impairment of its usefulness and at very slight additional first cost.

This type of structure is one of the things that they do better abroad, where the factory is as much the work of the competent designer as the villa, the city residence or the more showy order of commercial edifice. Commenting upon the growing tendency of American industrialists to build with an eye wholly to the practical, "The American Architect" observes:

"The importance of right planning, safe construction, sanitary equipment and economical operation of industrial buildings is beyond question, but when these matters alone have received the attention and study which they deserve and the esthetic possibilities of structure and materials have been neglected or overlooked, an opportunity for education in the higher sense has been wasted. Industrial buildings are increasing in numbers in the country so rapidly that their influence as educational factors, either for good or evil, depending upon their design, is too great to be overlooked.

"In some communities the industrial structures are more numerous, are more frequently viewed by the inhabitants, and are looked upon as of greater significance than are those of any other type. Can it be doubted that under such circumstances their influence is greater than that of a few relatively unimportant municipal or public buildings, or even the houses in which the majority of the people live?

"In short, if the public is to be educated to an appreciation of good architecture in this country, too much attention cannot be given to the design of the buildings, and among them the industrial building is annually becoming a greater factor and influence. It is believed that once the importance of the 'factory' in the campaign for better art now being waged by architects and others of education and culture is fully appreciated, the industrial buildings of this country will take on a character and appearance comparable with those of some European countries that have attracted the favorable attention of all visitors abroad."

* * *

The National Fire Protection Association, which assembled in Chicago for its twentieth annual meeting on May 9, called attention to the disastrous fires of the past few months which destroyed whole sections of cities in the South and elsewhere and which further emphasize the need for better building con-

struction and the avoidance of wooden shingle roofs and other combustible materials in the exterior of buildings.

The association heartily commends the growing movement for city planning as likely to produce better conditions as to building heights and congested areas, and provide the open spaces and broad avenues, which, beside their human and esthetic values, are excellent checks to sweeping fires.

In its warfare against the needless sacrifice of human lives and property by fire the association advocates the following measures:

1. The adoption by municipalities of the Standard Building Code of the National Board of Fire Underwriters to the end that fire resistive building construction may be encouraged, the use of inflammable roof coverings prohibited, adequate exit facilities from buildings assured, and interiors so designed and fire-stopped as to make easy the extinguishment of fires therein.

2. The adoption by all States of minimum building requirements for the protection of State and County hospitals, asylums and similar institutions outside city limits and of small communities in which the establishment and enforcement of a building code is impracticable.

3. The enactment by each State of the fire marshal law advocated by the Fire Marshals' Association of North America to the end that official investigation may be made of the causes of all fires, preventable fires may be eliminated by public education, and the crime of arson stamped out.

4. The adoption of the association's suggested ordinance providing for the systematic inspection of all buildings by city fire marshals or local firemen to insure the vigorous enforcement of rules for cleanliness, good housekeeping, and the maintenance of safe and unobstructed exits, fire-fighting apparatus and other protective devices.

5. The enactment of ordinances similar to that of Cleveland, Ohio, fixing the cost of extinguishing preventable fires upon citizens disregarding fire prevention orders, and a more general legal recognition of the common law principle of personal liability for damage resulting from fires due to carelessness or neglect.

6. The wider general use of the automatic sprinkler as a fire extinguishing agent and life saver and the more general adoption of the fire division wall as an important life saving exit facility.

7. A careful study of the technical surveys of cities made by the engineers of the Committee on Fire Prevention of the National Board of Fire Underwriters covering the items of water supplies, their adequacy and reliability, fire department efficiency, fire alarm systems and conflagration hazards; and of the possibility of co-operation among neighboring cities through mutual aid and the standardization of hose couplings.

8. The adoption of the association's suggested laws and ordinances for State and municipal regulation of the transportation,

storage and use of inflammable liquids and explosives.

9. The universal adoption and use of the safety match and legislation prohibiting smoking in all parts of factories, industrial and mercantile buildings except in such fire-proof rooms as may be especially approved for the purpose by fire departments.

10. The education of children and the public generally in careful habits regarding the use of fire.

* * *

It is announced that at the conclusion of the exhibition of the Allied Artists in the Fine Arts Building, 215 West Fifty-seventh street, New York, the galleries of the National Academy of Design in the building will be used to display models of the features of the American Versailles. This is the \$33,000,000 project which architects, artists and sculptors are planning to carry out at Port Washington, L. I., in an adaptation of Louis XIV.'s famous chateau and gardens.

The galleries will be transformed into an atelier and meeting place for the various art committees. They will also be used for the exhibition of models of sculpture and studies for mural decoration by the sculptors and artists connected with the work. The detailed plans of the various edifices, by Carriere & Hastings, the architects, will be shown and much of the draughting and engineering staff of the firm will be transferred to the Fine Arts Building, where the working out of the details will be done under the personal direction of Thomas Hastings and Owen Brainard, of the firm.

The sculptors connected with the creation of the Dominion of Versailles will set up the models of their various fountains in one of the galleries. The preliminary models of the three great fountains which are to be created by Frederick Macmonnies, Paul Bartlett and Robert Aitken will be assembled there by these famous sculptors.

Mural painters will also place on exhibition in the galleries their studies and sketches for the interior decoration of the chateau, the club house and other edifices. Mural paintings will form a noteworthy feature and will be executed by the most famous artists in America. The committee in charge of all interior and mural decorations comprises J. Alden Weir, president of the National Academy of Design; Edwin Blashfield, Frank V. Dumond and Jules Guerin.

Those interested in the progress of the enterprise will be able to see it grow in this great artistic workshop. Last week a plaster model of the great chateau was added to the exhibition, confined at present to one room. As fast as they can be finished models of other buildings will be added, so that the entire conception will be visualized in relief.

The way to get money is to sell things to people who want things. People who want building material and building devices read "The Guide."

TRADE NEWS AND GOSSIP.

**The Pennsylvania Wire Glass Company, of Philadelphia, has moved its New York office from 70 Fifth avenue to 20 West Thirty-fourth street.

**The Kerner Incinerator Company, Milwaukee, Wis., has moved its Eastern office from 30 East Forty-second street to 351 Lexington avenue, New York.

**It is announced that the twenty-eighth annual convention of the National Association of Master Steam and Hot Water Fitters will be held in Atlantic City, Wednesday to Saturday, June 21-24, inclusive, with headquarters at the Hotel St. Charles. This hotel has been recently remodeled and an extensive 13-story addition built in front directly facing the boardwalk.

**The fact that the National Association of Master Plumbers is to hold its annual convention June 19-22 also at Atlantic City, at The Breakers (formerly the Hotel Rurolf), directly across the street from the St. Charles, will add greatly to the attendance and interest at both conventions, as well as provide the opportunity for co-operation of the two associations on projects in which both are interested, such as the separation of heating and plumbing from general contracts.

**The U. S. Mineral Wood Company has moved its New York office from 140 Cedar street to the Foster Building, 280 Madison avenue.

**H. B. Smith Company, steam heating apparatus, will move its New York office and show room from 39 East Houston street to 10 East Thirty-ninth street.

**Buchartz Fireproofing Company, Inc., has moved its offices from 17 Battery place to Suite 1318, Havemeyer Building, 26 Cortlandt street, New York.

**Youngstown Sheet and Tube Company, of Youngstown, Ohio, has recently purchased the stock of the Andrews & Hitchcock Iron Company, acquiring the furnace plant of that company at Hubbard, Ohio, together with a large acreage of coal and 12 per cent. interest in the Mahoning Ore Company. The acquisition of this property will increase the annual production of pig iron by more than 1,000,000 tons.

**Directors of the Cleveland Builders' Exchange announce the coming removal of the organization from its present quarters on the third floor of the Chamber of Commerce Building to the third floor of the Rose Building, at Ninth street and Prospect avenue.

Philadelphia

Riches can secure no better illuminant than Electric Light for the mansion, yet our rates are so low that every home—even the most modest—can afford it. Electric Light is the brightest, cleanest, most convenient and hygienic light, as well as the most economical.

If your house is not wired for Electricity, ask us for the details of our deferred payment housewiring plan.

SOME MORE ADVERTISING "DONT'S."

Don't try to do a million dollar business on a two thousand dollar basis.

Don't try to advertise a quarter page proposition in a three-inch space.

Don't belittle a big business reputation by running a piking little "ad" among piker competitors.

Don't overlook the fact that as a man is judged by his stationery, so a firm is judged by its advertising.

There never was, never will be, a better medium for the man who has something to sell to a given class of buyers than the trade paper whose circulation is limited to that class. Newspapers with their swollen circulations strike at best but a chance target here and there. The trade paper carries your rifle fire to targets exclusively. You can't miss,—if your ammunition's right.

Without energetic effort a man must remain in a rut and can never expect to share with his hustling, up-to-date competitor. Quoting the words of a gifted scribe: "Health attends the man who acts. Wisdom guides him. Hope frees him. Joy helps him. Power moves him. Progress marks him. Fame follows him. Wealth rewards him. Love chooses him. Fate obeys him. God blesses him. Immortality crowns him."

Even the best piece of machinery gets a hot bearing once in a while.—Ex.

One way to escape the income tax is to quit advertising and do less business.

Permits for New Buildings

O is the abbreviation for owner. C is for contractor.

Philadelphia

STUDY THE ADVERTISING PAGES.

The average reader does not pay very close attention to the advertising pages unless he happens to be particularly interested in some product or is in the market for equipment or material. He is missing a part of scientific literature which offers suggestions as practical as the reading pages. He is also losing an opportunity of studying a subject which bears the most important relationship to every business on earth. No matter what line of work you may be engaged in, a knowledge of publicity and salesmanship is valuable. Every form of occupation to be made successful depends upon a degree of salesmanship. Study the advertising pages. They represent an expenditure of time, thought and money, which makes them well worthy of your attention.—“Municipal Engineering.”

Do not fear advertising as an expense, but court it as an asset, for that is really what it is—a value unseen, but determined from results.

The man who does not advertise is like the man who stops his watch to save time.—Exchange.

One secret that has been fairly well kept is the secret of success. Strange, too, when so many people are anxious to tell about it.

We know lots of men who have made money without the aid of advertising, but—they haven't made it since 1876.

Do you get “The Guide” regularly? You should. Better subscribe now, while you think of it, and keep in touch. The man who fails to get and to read carefully the trade paper of his chosen line, is missing a while lot of valuable data that should be at his command.

“Do what you are paid to do—and then some—it's the then-some that gets your salary raised.”—James B. Miller.

A DROP OF INK.

A drop of printer's ink
May make a thousand think.
A single drop
May keep your shop
From getting on the blink.

A drop, when hardly dry,
Makes many people buy.
It helps your biz',
And therefore is
A goodly thing to try.

—Ex.

There's one variety of advertiser who gets our Angora. This is the chap who can't afford a large space and doesn't advertise, as a regular thing, because a small space “isn't seen.” Some of the biggest advertisers we have started out with small space. Ask them whether the small space is seen. If advertisers had to wait until their businesses developed to full page stature before advertising, there'd be mighty few advertisers. The big man becomes big by growth. And growth starts with the seed.

If your proposition is one that should appeal to architects, builders, building owners, decorators, material and supply concerns, “The Builders' Guide” is the right medium for your advertising and cannot fail to bring you profitable returns.

A retailer may fool himself by failing to charge all of his expenses into his cost of doing business, but his expenses will come out of his gross profits just the same.—Ex.

Advertise! The minute you stop advertising you lose ground. You may not feel this loss right away. But you must feel it in the end. Advertising is the dynamo of modern business.

The man “who doesn't believe in advertising” can't understand why the other fellow gets the business.

Many a man has a “Do It Now” motto over his desk and cobwebs on his brain and dust on the desk

The trouble with some advertising is that it is like the conversation of certain people—it never says anything.—“Novelty News.”

Small ideas, small methods, small men are becoming antiquated. This is the day of the broad outlook and big doings.

Few persons appreciate the enormous cost of advertising a popular product before it obtains popularity. One of the most successful advertisers in the country, whose income reaches hundreds of thousands of dollars annually, told *Leslie's Weekly* that he wasted at least a quarter of a million dollars "before he learned the advertising game." He estimates that he spent this amount on circulars, gaudy lithographs, sign boards, and street car advertising, out of which he received so little benefit, as far as he could trace it, that he regarded the expenditure as money pretty nearly wasted

The chap who bags the glittering prize
Is the fellow who learns to advertise

Architect ready for bids.

The darkest hour in any man's life is when he sits down to plan how to get money without earning it.—Horace Greely.

PLACE AND VALUE OF THE TRADE PAPER.

"Eloquent speakers who have preceded me have told of the greatness of our American industries, and have rightly given to advertising a large measure of credit for our industrial and commercial supremacy.

They have spoken of the daily and weekly newspapers, the agricultural press, the magazines, the billboards, the street cars, and even the advertising novelties, as the forces that have played an important part in this wonderful upbuilding, but they have wholly missed the greatest force of them all—the trade and technical press of the country."—R. R. Shuman before the annual convention of the Associated Advertising Clubs at Omaha.

SOME MORE ADVERTISING "DONT'S."

Don't try to do a million dollar business on a two thousand dollar basis.

Don't try to advertise a quarter page proposition in a three-inch space.

Don't belittle a big business reputation by running a piking little "ad" among piker competitors.

Don't overlook the fact that as a man is judged by his stationery, so a firm is judged by its advertising.

Even the best piece of machinery gets a hot bearing once in a while.—Ex.

Proposals

Bonds. Improvements. Equipment.

As the Home Office and Headquarters of the Most Important Financial, Railroad, Engineering, Structural, Manufacturing and Equipment Firms in the United States, Pennsylvania offers a Particularly Rich and Productive Field for "Proposal" advertising. "The Builders' Guide" is the Only Medium in this Field.

SEALED PROPOSALS.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., May 11, 1916.—Sealed proposals will be opened in this office at 3 p. m., June 15, 1916, for the construction, complete, of the United States post office at South Boston, Va. Drawings and specifications may be obtained from the custodian of site at South Boston, Va., or at this office, in the discretion of the Supervising Architects. Jas. A. Wetmore, Acting Supervising Architect.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., May 20, 1916.—Sealed proposals will be opened in this office at 3 p. m., June 22, 1916, for the construction, complete, of the United States post office at Rumford, Me. Drawings and specifications may be obtained from the custodian of site at Rumford, Me., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., May 25, 1916.—Sealed proposals will be opened in this office at 3 p. m., June 20, 1916, for the construction complete of the United States Post Office at Waterloo, N. Y. Drawings and custodian of site at Waterloo, N. Y., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., May 26, 1916.—Sealed proposals will be opened in this office at 3 p. m., June 26, 1916, for the construction complete at the United States post office at Pottstown, Pa. Drawings and specifications may be obtained from the custodian of site at Pottstown, Pa., or at this office, in the discretion of the Acting Supervising Architect. Jos. A. Wetmore, Acting Supervising Architect.

It isn't enough to just advertise. There is competition these days in advertising, as in other things. You must make your advertising attractive. You must make it say something,—something definite, original and convincing. If you lack faith in your own ability to do this, let us do it for you. Give us the facts. Talk to us just as you would to a prospective buyer. That is the kind of talk that makes profitable advertising. We'll look after the verbal frills. That's our business.

If you can persuade people to buy your goods you make money. "The Guide rounds up in its clientele the people you want to persuade. A certain amount of space and the right kind of selling argument does the rest.

Eight Years Use Improved These Composition Floors

Treated
with

Saums Preservative

Navy Young Men's Christian Association, Brooklyn, N. Y.

Eight years ago these composition floors were disintegrating. They were treated with Saums Preservative. Disintegration was stopped, the color set and today the floors are in fine condition being dustless and waterproof.

Editorial Comment

The growing use of color in present day architecture lends special interest to an article on "The Value of Clean Color in Decoration" in the May "Craftsman." The author is Albert Herter. Mr. Herter attributes our American predisposition to the drab, the sober, and the sombre, to the strain of the Puritan in us.

"For several generations back all freshness of color or character seems to have been regarded as alarming," writes Mr. Herter. "I never have been able to understand just why a brown ambiguity, vagueness in point of view, in theory and expression should have been accepted as a virtue. Whether it is because the first people who came to America came to escape the punishment usually meted out to people who have convictions, and in the natural order of things their descendants have reacted from the state of mind that makes pioneers, it is hard to say; but certainly we have managed in the past to produce an unconvincing type of civilization—our houses nondescript, our people mongrel, our art sense without vivid relation to country or individuality, provincial, in fact.

"We have almost grown to feel that color was vulgar, even though we may have recovered from the Puritan point of view which regarded it as sacrilegious—the poor Puritans who in a new, radiant country, grayed off light at every angle. It is only very recently that we have lost our fear of brilliancy and purity of color, that we have dared to have 'clean color' in our architectural ornament, in our gardens, fabrics, pottery, and really only within the last year or two that we have grown to appreciate it in furniture. And yet there is no more powerful force for peace and delight or for irritation and depression than color, and whether it is somber in itself or in its combinations, matters little in its power to depress and to render uncomfortable. Of course, there are times when sober color may be used, as there are times when sinister or gay and humorous colors may be introduced in interiors, but there is no time when color should be so depleted and anaemic that it ceases to excite any emotional reaction whatsoever.

"It seems very possible to make combinations, as I have tried to do in fabrics, where there is what painters call broken color throughout, giving to the surface, however gray, a luminous quality."

"Leon Bakst has said interesting things about the use of color, and has perhaps been one of the greatest radical experimenters that the decade has known, both in the staging of plays and of dancing. He frankly selects colors and combines them with a view to expressing the same emotions that the drama or that motion will produce. For instance, in his 'Scheherazade' he uses a lugubrious green

against a blue, as he says, full of despair. Then he goes on to say, 'There are reds which are triumphal and there are reds which assassinate. There is a blue which can be the color of a St. Madeleine, and there is a blue of a Messalina. The painter who knows how to make use of this, the director of the orchestra who can with one movement of his baton put all this in motion, without crossing them, who can let flow the thousand tones from the end of his stick without making a mistake, can draw from the spectator the exact emotion which he wants him to feel.' He believes that it is possible to bring out every effect in color and line that can be produced with the spoken word or through the influence of music."

* * *

Mr. Herter is a convert to the view of Mr. Irving Pond that we have reached a stage in our national development at which we have the right to look for a distinctively American note in our architecture. While he does not say it in so many words, he leaves us with the impression that a certain Americanization of period types, plus the color note, is the channel through which our architecture is to arrive at this final nationalization.

"I feel that the time has come when absolute imitation of any period in architecture, furniture or decoration is not greatly valued except for educational purposes," he writes. We are becoming more and more a developed personality as a nation, we are losing our provinciality, we are ceasing to be fearful of our own expression; in other words, the American has developed an outline. This outline is realized in his more definite taste in music, drama, his architecture and the fitting of his home.

"Above all things the American interior to-day should be comfortable and cheerful. I think that the use of painted wood is going to bring a delightful color note into our homes. Everywhere we are working for the beautiful thing that is more individual and of necessity useful and comfortable."

* * *

In the same number of the same excellent magazine, Mr. Irving J. Gill, whose severely geometrical design is said to key wondrously well with the shaggy beauty of the California hills, continues his series of articles on "The New Architecture of the West." Taking as his text "An Architect is Known Rather by What He Omits," Mr. Gill contributes a series of thoughtful and ingeniously reasoned chapters dealing not only with the subject selected by him in particular, but with architecture per se in general.

"Architecture, Victor Hugo says, is the great book of the world, the principal expression of man in his different stages of development, the chief register of humanity," writes

Mr. Gill. "Every religious symbol, every human thought has its page and its monument in that immense book. Down to the time of Gutenberg, he points out, architecture was the principal, the universal writing. Whoever was born a poet then, became an architect. All arts obeyed and placed themselves under the discipline of architecture. They were the workmen of the great work. There was nothing which, in order to make something of itself, was not forced to frame itself in the shape of architectural hymn or prose. He has shown us that the great products of architecture are less the works of individuals than of society, rather the offspring of a nation's effort than the inspired flash of a man of genius, the deposit left by a whole people, the heaps accumulated by centuries, the residue of successive evaporations of human society; in word, a species of formation. Each wave of time contributes its alluvium, each race deposits its layer on the monument, each individual brings his stone.

"No architect can read his inspired analysis of the place and the importance of architecture in preserving the records of the world's thought and action, without approaching his own part in this human record with a greater reverence and greater sense of responsibility. What rough or quarried stone will each of us contribute to the universal edifice, what idle or significant sentence will we write with brick and stone, wood, steel and concrete upon the sensitive page of the earth?"

* * *

"If we, the architects of the West, wish to do great and lasting work we must dare to be simple, must have the courage to fling aside every device that distracts the eye from structural beauty, must break through convention and get down to fundamental truths.

"Through force of custom and education we, in whose hands much of the beauty of country and city is entrusted, have been compelled to study the style of other men, with the result that most of our modern work is an open imitation or veiled plagiarism of another's idea.

"To break away from this degradation we must boldly throw aside every accepted structural belief and standard of beauty and get back to the source of all architectural strength—the straight line, the arch, the cube and the circle—and drink from these fountains of Art that gave life to the great men of old."

* * *

In the foregoing chapter we have Gill the radical, the architectural cubist preaching the simplicity of daring, the doctrine of the severely geometric. Somewhere about equidistant from Gill in his role of the extremist and the over-ornate school with which we are only too familiar here in the East lies hidden, like truth in a well, the architecture of the future. But, to resume:

"Every artist must sooner or later reckon directly, personally with these four principles—the mightiest of lines. The straight

line borrowed from the horizon is a symbol of greatness, grandeur and nobility; the arch patterned from the dome of the sky represents exultation, reverence, aspiration; the circle is the sign of completeness, motion and progression, as may be seen when a stone touches water; the square is the symbol of power, justice, honesty and firmness. These are the bases, the units of architectural language, and without them there can be no direct or inspired architectural speech. We must not weaken our message of beauty and strength by the stutter and mumble of useless ornaments. If we have nothing worth while to say with our building then we should keep quiet. Why should we chatter idly and meaninglessly with foolish ornaments and useless lines?"

* * *

"Any deviation from simplicity results in a loss of dignity. Ornaments tend to cheapen rather than enrich, they acknowledge inefficiency and weakness. A house cluttered up by complex ornament means that the designer was aware that his work lacked purity of line and perfection of proportion, so he endeavored to cover its imperfection by adding on detail, hoping thus to distract the attention of the observer from the fundamental weakness of his design. If we omit everything useless from the structural point of view we will come to see the great beauty of straight lines, to see the charm that lies in perspective, the force in light and shade, the power in balanced masses, the fascination of color that plays upon a smooth wall left free to report the passing of a cloud or nearness of a flower, the furious rush of storms and the burning stillness of summer suns.

"We would also see the glaring defects of our own work if left in this bold, unornamented fashion, and therefore could swiftly correct it.

"I believe if we continually think more of line, proportion, light and shade, we will reach greater skill in handling them, and a greater appreciation and understanding of their power and beauty. We should build our house simple, plain and substantial as a boulder, then leave the ornamentation of it to Nature, who will tone it with lichens, chisel it with storms, make it gracious and friendly with vines and flower shadows as she does the stone in the meadow. I believe also that houses should be built more substantially and should be made absolutely sanitary. If the cost of unimportant ornamentation were put into construction, then we would have a more lasting and a more dignified architecture."

* * *

Here is a chapter on the California landscape that discloses an artist's grasp of the relation which should subsist, in all effective designing, between the building and its environment, the form and treatment of the structure and its site and setting:

"Because of the intense blue of sky and sea that continues for such long, unbroken periods, the amethyst distant mountains that form an almost universal background for houses or cities, the golden brown of summer

fields, the varied green of pepper, eucalyptus and poplar trees that cut across it in such decorative forms and the profusion of gay flowers that grow so quickly and easily, houses of a bright romantic picturesqueness are perfectly suitable that would seem too dramatic in other parts of the country. They seem a pleasing part of the orange-belted flower fields and belong to the semi-tropical land.

"These same houses would certainly look artificial and amusingly uncomfortable and out of place in the East; but they essentially belong to the land of sunshine."

* * *

"The contour, coloring and history of a country naturally influence its architecture. The old wooden Colonial houses of the East, shaded by noble elms, with their attendant lanes and roads outlined by stone walls, perfect pictures of home beauty; the stone houses of Pennsylvania, charming in color, stately, eloquent of substantial affluence and generous hospitality; and the adobe houses of the Arizona Indians formed of the earth into structures so like the surrounding ledges and buttes in shape that they can scarcely be told from them, triumphs of protective, harmonious building, are familiar types of buildings characteristic of their locality.

"California is influenced, and rightly so, by the Spanish Missions as well as by the rich coloring and the form of the low hills and wide valleys. The Missions are a part of its history that should be preserved, and in their long, low lines, graceful arcades, tile roofs, bell towers, arched doorways and walled gardens we find a most expressive medium of retaining tradition, history and romance. In coloring and general form they are exactly suited to the romantic requirements of the country. It is safe to say that more architectural crimes have been committed in their name than in any other unless it be the Grecian temples. The facade of the San Diego Mission is a wonderful thing, something that deserves to be a revered model, something to which local building might safely and advantageously have been keyed. Instead of this it has been abused and caricatured in the most shocking way. Its charming proportions and graceful outline have been distorted to adorn tall public buildings, low railway stations, ornate hotels, cramped stables and minute private houses in the most irreverent, inexcusable and pitiable way. The arched cloisters of the Missions have been seized upon and tortured until all semblance of their original beauty has been lost. Their meaning and definite purpose—that of supporting the roof or the second story and thus forming a retreat or quiet walk for the monks—has been almost forgotten."

Graham-Campion Co.

DEPENDABLE

BUILDING CONSTRUCTION

1215 Filbert Street

Philadelphia

Riches can secure no better illuminant than Electric Light for the mansion, yet our rates are so low that every home—even the most modest—can afford it. Electric Light is the brightest, cleanest, most convenient and hygienic light, as well as the most economical.

If your house is not wired for Electricity, ask us for the details of our deferred payment housewiring plan.

"The arch is one of our most imposing, most picturesque and graceful architectural features. Its power of creating beauty is unquestionable, but like any other great force, wrongly used, is equally destructive. Fire warms and cheers us and cooks our food, but if not carefully handled destroys everything it touches. The Missions have taught us also the beauty and usefulness of the court. Romana's house, a landmark as familiar in the South as some of the Missions, was built around three sides of an open space, the other side being a high garden wall. This home plan gave privacy, protection and beauty. The court contains a pool and well in the center and an arbor for grapes along the garden wall; the archway that runs along the three sides formed by the house made the open-air living rooms. Here were arranged couches for sleeping, hammocks for the siesta, easy chairs and tables for dining. There was always a sheltered and a sunny side, always seclusion and an outlook into the garden. In California we have liberally borrowed this home plan, for it is hard to devise a better, cozier, more convenient or practical scheme for a home. In the seclusion of the outdoor living rooms and in their nearness to the garden, the arrangement is ideal."

* * *

We have quoted rather liberally from the Gill article for the reason that this Pacific Coast radical in architecture is one of the men who, in the opinion of Eastern visitors, who have studied his work at close range, is destined to do big and significant things in what is called "the new architecture." And for another reason, which is that Mr. Gill writes well and interestingly of a movement but little understood here in the East—the revolt of the far West against the preponderating French and Italian influence in American architectural design.

Permits for New Buildings

O is the abbreviation for owner. C is for contractor.

Philadelphia

Keller Bros. (O and C), Nearmon road. Cost, \$5,600. Four dwellings, 15x36 feet, slag roof, hot air heating, 2 stories, south side Repka, 40 feet west of Wilde street.

P. E. Leufastey (O), Wyncote, Pa. J. Paul Emery (C), 4907 Wynnefield avenue. Cost, \$6,300. Dwelling, brick, 22x42 feet, 2 stories, shingle roof, hot water heating, east side Fifty-third street, about 200 feet north of Wynnefield avenue.

C. B. Porter Co. (O), 231 North Second st. Stewart Bros. (C), 2428 and 30 North Orkney street. Cost, \$35,000. Building, brick, 5 stories, felt and slag roof, steam heat, size not given, 124 North Second street.

Max Haupt (O), 820 Drexel Building. Louis Swerdloff (C), 2345 South Beulah street. Cost, \$269,000. Twenty-ninth dwellings, brick, slag roof, hot water heating, 2 stories. Three dwellings, 16x30 feet, south side Chancellor street, west Fifty-eighth st. Two dwellings, 16x30 feet, north side Chancellor street, west of Fifty-ninth street. Two dwellings, 16x39 feet, southwest corner Fifty-ninth and Chancellor streets. Two dwellings, 16x30 feet, northwest corner Fifty-ninth and Irving streets. ne dwelling, 16x34 feet, northwest corner Fifty-ninth and Irving streets. Four dwellings, 16x39 feet, northwest corner Fifty-ninth and Irving streets. Four dwellings, 16x39 feet, corner Fifty-ninth and Chancellor sts. Two dwellings, 16x39 feet, corner Fifty-ninth and Locust streets. Three dwellings, 16x31 feet, corner Fifty-ninth and Locust streets. Two dwellings, 16x31 feet, corner Fifty-ninth and Locust streets.

John Stafford (O), 141 Green lane. Elmer L. Cuthbertson (C), 334 Roxborough street. Cost, \$4,175. Dwelling, brick, 16x35 feet, tin roof, hot water heating, northwest corner Green lane and St. David street.

Francis E. Hennessey (O), Fifth and Walnut streets. G. J. Reich (C), 1112 Souden street. Cost, \$78,000. Fifteen dwellings, brick, 3 stories, slag roof, steam heating.

One dwelling, 16x47 feet, northeast corner Broad and Wingohocken streets. Fourteen dwellings, 16x47 feet, east side Broad street, west of Wingohocken street.

Denny Hilborn & Rosenbach (O), 232 North Twelfth street. Henry E. Baton (C), Twelfth and Sansom streets. Cost, \$17,000. Building, reinforced concrete, slag roof, 17x90 feet, 5 stories, steam heating, 234 North Twelfth st.

Samuel M. Clement, Jr. (O), West End Trust Building. Frederick Elridge & Sons (C), 5522 Germantown avenue. Cost, \$3,750. Garage, 23x34 feet, slate roof, steam heating, 2 stories, southeast corner Hortter streets and Wissahickon avenue.

A. M. Zane (O and C), 220 Tioga street. Cost, \$85,500. Forty-five dwellings, brick, slag roof, hot water heating, 2 stories, 15x36 feet, Alleghany avenue and Bailey street.

J. Charles Yundt (O and C), 301 W. Tabor road. Cost, \$8,000. Fous dwellings, brick and stone, 14x37 feet, slag roof, hot water heating, 2 stories, Fairhill and Lindley avenue.

Harry R. Moyer (O and C), 1923 Atlantic avenue. Cost, \$82,000. Dwelling, brick, slag roof, hot air heating, two stories, 14x41 feet, Albright and Amber streets.

Board of Education (O), Nineteenth and Market streets. Melody & Keating (C), 1322 Race street. Cost, \$59,000. School, reinforced concrete, 3 stories, slag roof, steam heating, 62x74 feet, Twenty-third and Cambria streets.

W. Percival Johnson (O and C), 4039 Lancaster avenue. Cost, \$80,400. Sixteen dwellings, stone and brick, slag roof, central heating plant, steam, 3 stories. Six dwellings, 23 x35 feet, 907 to 625 Wynnwood road. Eight dwellings, 23x35 feet, 911 to 933 Wynnwood road. Two dwellings, 24x36 feet, 935 to 837 Wynnwood road.

New York Pie Baking Co. (O), Twenty-fifth and Lombard streets. Philip Haibach Const. Co. (C), 1261 North Twenty-sixth st. Cost, \$25,000. Building, reinforced concrete, 2 stories, 32x126 feet, slag roof, north side Lombard street, west of Twenty-fifth street.

Alterations and Additions

Lutheran Orphan Home (O), 6950 Germantown avenue. L. W. Kitselman (C), 125 E. Upsal street. Cost, \$1,400. Porch, 20x26 feet, 6940 Germantown avenue.

Gimbel Bros. (O), Ninth and Market sts. Percival M. Sax (C), 812 Heed Building. Cost, \$1,600. Department store, extend first story balcony rear of store, 86x16 feet, Ninth and Market streets.

Halton Printing & Processing Co. (O), 3851 Frankford avenue. Geo. H. Thirsk & Son (C), 4104 Orchard street. Cost, \$6,000. Wash house, brick, 108x103, triangular, 2 stories, slag roof, Coral and Walm streets.

Jos. Young (O), 1429 South Twenty-third street. Chas. H. Zebley (C), Pine and Turner streets. Cost, \$900. Garage, brick, 11x14 feet, 1429 South Twenty-third street.

Theodore Marquetand (O), 3633 Germantown avenue. Chas. H. Fisher (C), 3654 N. Mervine street. Cost, \$550. Store, brick, addition, 3x24 feet, 3633 Germantown avenue.

Chas. Trapold (O), Krams avenue and

Mitchell street. Keller Bros. (C), 480 Herman road. Cost, \$700. Store, brick, one-story addition, 12x14 feet, tin roof, northwest corner Krams avenue and Mitchell street.

Mrs. Louise Martin (O), 3004 North Tulip street. Joseph Rambo (C), 1226 North Eighth street. Cost, \$500. Dwelling, brick, cellar, slag roof, 3004 Tulip street.

L. Antonof (O), 837 North Eighth street. Max Kane (C), 871 North Sixth street. Cost, \$1,200. Store, general alterations about bulk windows and repairs, 312-14-15 Poplar street.

Maud Piantieri (O), 359 E. Rittenhouse street. Chas. Davolio (C), 5845 Osola street. Cost, \$2,300. Dwelling, brick, 2 stories, front addition, 20x14 feet, 226 East Haines street, Germantown.

John Patterson (O), 2301 E. Ann street. Franklin L. Fauekner (C), 2303 E. Cambria street. Cost, \$500. Saloon, brick, one-story rear addition, 12x14 feet, slag roof, northeast corner Ann and Talys streets.

G. C. Callahan (O), Commercial Trust

Building. Hoog Const. Co. (C), 1634 Sansom street. Store, brick, \$4,800. General alterations, 412-14 Market street.

P. C. Tomson Co. (O), 29 Washington avenue. M. E. Brighman (C), 29 Washington avenue. Cost, \$1,000. Boiler house, brick, general repairs, 29 Washington avenue.

Max Secon (O), 5336 Osage avenue. Otto Matz (C), 2108 North Lawrence street. Cost, \$1,000. Store, brick, bake oven, 134 South Sixtieth street.

A. Lowry & Bro. (O), Delaware avenue and Arch streets. R. C. Ballinger & Co. (C), 218 North Thirteenth street. Cost, \$1,000. Store and dwelling, brick, repair fire damage, 2419 Ridge avenue.

Westmoreland Dye Works (O), Westmoreland and East Jasper streets. H. R. Hennicke Inc. (C), Drexel Building. Cost, \$2775. Chimney, brick, 125 feet high, concrete foundations, south side Cornwall street, east of Jasper street.

J. J. Felin Co. (O), Philadelphia. Edw. Atkins (C), Philadelphia. Cost, \$500. Boiler house, brick, 40x60 feet, one-story, 4142 Germantown avenue.

J. J. Felin Co. (O), Philadelphia. Edw. Atkins (C), Philadelphia. Cost, \$3,000. Packing house, brick, 30x60 feet, 2 stories, as plans, 4142 Germantown avenue.

Samuel M. Clement, Jr. (O), West End Trust Building. Frederick Elridge & Son (C), 5522 Germantown avenue. Cost, \$2,250. Dwelling, brick porch, southeast corner Hortter street and Wissahickon avenue.

Geo. G. Nielly (O), 1419 Spring Garden street. H. H. Burrell (C), 206 South Quince street. Cost \$4,000. Storage, brick, repair fire damage, 1012-14-16 North American st.

J. A. Patterson (O), Fifteenth and Sansom streets. Brownworth Co., 1611 Sansom st. Cost, \$1,500. Apartment, install fire escapes, 1925-27 Chestnut street.

Benj. Appelbaum (O), 2009 South Sixth st. N. Litman (C), 2030 South Fifth street. Cost, \$400. Dwelling, brick, one-story rear addition, 12x12 feet, slag roof, general alterations, 2009 South Sixth street.

Jno. T. Lewis & Bros. (O and C), 705 Lafayette Building. Cost, \$6,500. Warehouse, corrugated steel, 63x63 feet, 2545 Armingo street.

U. G. I. Co. (O and C), Broad and Arch streets. Cost, \$500. Pump house, corrugated iron, 20x20 feet, Tioga and Casper streets.

Gillinder & Son (O), Tacony, Pa. Jno. F. Davies (C), 1110 Foulkrod street. Cost, \$10,000. Building, brick, 2 stories, addition 80x64 feet, southeast corner State road and Deverana street.

General Mfg. Co. (O), Swanson street and Snyder avenue. Henry P. Friend (C), Norristown, Pa. Cost, \$2,000. Building, brick, one-story as plan, slag roof, southeast corner Swanson and Snyder avenue.

C. W. McCling (O), 6210 Lansdowne avenue. F. Eshiorman (O), 1700 North Sixtieth street. Cost, \$1,000. Store and dwelling, 2 stories, front addition, 18x18 feet, slag roof, 6206 Lansdowne avenue.

W. Price (O), Montgomery avenue. Wm. Myers (C), 2000 East Cambria street. Cost, \$600. General repairs, 604-6-8 Flora street.

A. D. Mountain (O), 908 North Thirteenth street. Theo. L. Warfel (C), 916 North Thirteenth street. Garage, brick, 17x67 feet, slag roof, 1230 Cambria street.

T. Smithurst (O and C), Eighty-first and Lesser avenue. Cost, \$700. Bungalow, brick, 16x34 feet, tin roof, north side Lesser avenue west Eighty-first street.

John Roberts (O), 1610 North Fifteenth street. Frank G. English (C), 1608 North Carlisle street. Cost, \$435. Garage, brick, one-story addition, 4x20 feet, 1609 North Sydenham street.

Caroline Steinberg (O), 3145 Kensington

avenue. Harry Drake (C), 3139 Frankford avenue. Cost, \$1,500. Storage, brick, general repairs, no additions, 1912-14 East Clementine street.

Morris Chodoff (O), 522 Pine street. A. P. Luckner (C), 1727 North Fifty-first street. Cost, \$4,000. Dwelling, brick, third-story rear addition, 34x13 feet, slag roof, 728 Pine street.

Berachah Church (O), 2240 North Twenty-ninth street. F. B. Davis (C), 240 North Sixteenth street. Cost, \$8,900. Church, brick, new addition, 52x24 feet, 1 story and balcony as per plan, new roof, 2240 North Twenty-ninth street.

Young Men's Republican Club (O), southeast corner Jasper and Willard streets. Cost, \$800. Club house, brick, 2 story rear addition, 19x8 feet, slag roof, southeast corner Jasper and Willard streets.

Chas. J. O'Neil (O), southeast corner Palmer and Frankford avenue. Jacob Gaertner (C), 2214 North Third street. Cost, \$1,300. Shop, brick, 2 stories, slag roof, northwest corner Tulip and Palmer streets.

John McClatchy (O and C), 848 Land Title Building. Cost, \$500. Garage, stone, 20x23 feet, 1 story, slate roof, rear of 308 Lincoln drive.

H. M. Kuehner (O and C), 2174 East York street. Cost, \$1,500. Garage, brick, 18x74 feet, 1 story, slag roof, southeast corner Gorden and Sepriva streets.

B. Barbieri (O), 1608 East Passyunk avenue. Jos. Padolese (C), 1448 South Sixteenth street. Cost, \$900. Store and dwelling, brick, 2 stories, rear addition, 12x13 feet, slag roof and alterations, 1608 East Passyunk avenue.

M. Lunberg (O), 333 North Fourth street. Max Celtoir (C), 1031 Ogden street. Cost, \$700. Warehouse, brick, 2 stories, rebuild front, 333 North Fourth street.

Rev. E. F. Prendergast (O), Logan Square. John McShain (C), 1610 North street. Cost, \$2,300. Dwelling, tile blocks, third story addition, 45x31 feet, with 12-inch hollow tile slag roof as plans, northwest corner Sixty-second and Cedar avenue. Carthage rectory.

Penna. Co. (O), 517 Chestnut street. Brownworth & Co. (C), 1611 Sansom street. Cost, \$500. Apartment, erect one standard Philadelphia fire escape, 1328 Spruce street.

Mrs. R. Erksline (O), Eleventh street and Sixty-sixth avenue. L. Davis (C), Thirteenth stone, 20x20 feet, slate roof, southeast corner Eleventh and Sixty-sixth avenue.

Robert McAllister (O and C), 6813 Greenway avenue. Cost, \$4,000. Garage, brick, 1 story, 40x100 feet, slag roof, 6811-13 Greenway avenue.

J. O. Arnold (O), 2503 North Eighteenth street. Geo. A. Boyd (C), 211 East Willow Grove avenue. Cost, \$550. Dwelling, brick, general alterations, 4149 North Broad street.

R. M. Braithwart (O and C), Broad and Mt. Vernon streets. Cost, \$500. Factory, brick, 5 stories, elevator enclosure, 9x19 feet, northeast corner Broad and Mt. Vernon streets.

S. Herron (O), 5112 Thompson street. Searl (C), 5140 Thompson street. Cost, \$600. Store, brick, 1 story rear addition, 16x21 feet, slag roof, 1213 North Fifty-second street.

The Farm Journal (O), South Washington Square. Brownworth & Co. (C), 1611 Sansom street. Cost, \$800. Lodging, one standard Philadelphia fire escape, 702-04 South Washington square.

The Penna. Co. (O), 517 Chestnut street. Brownworth & Co. (C), 1611 Sansom street. Cost, \$500. Apartment, erect one standard Philadelphia fire escape, 1336 Spruce street.

E. P. Alexander (O), 414 North Third st. Turner Concrete Steel Co. (C), 1713 Sansom street. Cost, \$65,000. Building, concrete, 4 stories, front addition, 71x37 feet, rear addition, 71x90 feet, 414-16 North Third street, extending west to Oriana street.

Adam Smith (O), 133 North Twenty-first street. T. J. Bradley (C), 112 North Twenty-first street. Cost, \$575. Dwelling, new steam heating system, 133 North Twenty-first street.

American Can Co (O), Beach and Palmer streets. Horace H. Burrell (C), 206 South Quince street. Cost, \$1,200. Tile locker and toilet rooms, no additions, southwest corner Beach and Palmer streets.

G. H. Lorimer (O), Walnut Hill. Horace H. Burrell (C), 206 South Quince street. Cost, \$2,000. Building, 1 story, general repairs, no additions, east side Pine road, south of Welsh road, Walnut Hill.

Jas. Campbell (O), northwest corner of Eleventh and Cherry streets. Jno. Welsh (C), 138 North Seventeenth street. Cost, \$300. Store, brick, general alterations and repairs, northwest corner Eleventh and Cherry streets.

TRADE NEWS AND GOSSIP.

**The Detroit Roofing Tile Company has moved its office from 200 Fifth avenue to 103 Park avenue, New York City

**J. M. Currin, architect, has recently opened an office for the general practice of his profession in the Mutual Building, Richmond, Va. Mr. Currin is a graduate of the University of Pennsylvania.

**The Amco Glazed Block Company has recently moved its office from 347 Fifth avenue to 405 Lexington avenue, New York.

**Charles A. Carr, architect for the Bankers' Realty Investment Company, 706 Commerce Building, Kansas City, Mo., desires catalogs and samples from manufacturers and jobbers interested in the building trades.

**The MacArthur Concrete Pile and Foundation Company has moved its offices from 11 Pine street to the Equitable Building, 120 Broadway, New York.

**Percy H. Wilson, formerly secretary for the Association of American Portland Cement Manufacturers, has opened an office for the practice of his profession as a consulting engineer at 1232 Land Title Building, Philadelphia, Pa.

**E. V. Warren, architect, of Brooklyn, and C. W. Niehaus, sculptor, of New Rochelle, N. Y., have been selected to design the monument to the memory of Francis Scott Key, to be erected at Baltimore, Md.

BUSINESS PROSPECTS BRIGHT.

The business revival has gathered great force in the West and is working eastward. Numerous cities report trade to be far ahead of the best of previous seasons, according to commercial reports. Building operations during April in 149 principal cities were 15.5 per cent. ahead of the record of April a year ago.—New York "Record and Guide."

A COMMISSION THAT IS NEEDED.

As a consolation for many commissions appointed to regulate and restrict property interests, one appointed to help business would be popular in New York. As was said at the dinner of the National Association of Manufacturers, business interests should not be left to the mercy of the uplifters.—"Real Estate Record."

LABEL YOUR WORK

Signs 2 x 3 ft., 12c. Each

There is nothing more dignified or elegant than our large Weatherproof Fiber Cardboard Signs. Easy to carry, quick to place, not greasy, more serviceable than wood or iron, impervious to all weather conditions and cost from 8 to 20 cents apiece—in lots of one hundred.

INNOVATION AT COLUMBIA

Columbia University has inaugurated a notable experiment in co-operation between the teaching and the practice of architecture. On the assumption that nothing but good could accrue to both school and profession through a proper understanding and reciprocal appreciation of one another's provinces, the University authorities decided to invite three architectural societies of New York City to elect three practicing architects each, to form a Committee of Visitors, whose advice as based upon periodic inspections of the school's plant or equipment, current work and mode of teaching could be depended upon as a guide in checking up scholastic results by professional standards and demands. The three societies and the elected members from each to compose this committee are the following: From the New York Chapter of the American Institute of Architects, Bertram G. Goodhue, Charles A. Platt, and Egerton Swartwout; from the Society of Beaux-Arts Architects, Thomas Hastings, Henry F. Hornbostel, and Lloyd Warren; from the Alumni Association of the School of Architecture of Columbia, Goodhue Livingston, John Russell Pope, and I. N. Phelps Stokes.

It will be noted that the names of the members of the committee are those of practitioners in the forefront of their professions, which offers at once an indication of the favorable impression made by the plan in the ranks of those who practice only and never preach and also a good augury for the welfare of the project because of the predestined high quality of the suggestions and advice to be forthcoming.

The committee in question is purely an advisory one, but its work is none the less of great administrative value. Its recommendations will be the upshot of frequent attendance at the school, and, once submitted, it will be the function of the authorities of the school to make proper adjustment wherever academically feasible to accord the existing curriculum with the most urgent practical demands of the great body of architects who employ its graduates.

The committee has already begun upon its duties and has on several occasions inspected the current output at Avery Hall. A schedule has been arranged on the basis of which three members of the committee, one from each of the groups mentioned, will be invited to attend each of the judgments of work in De-

sign held during the year. Since about ten judgments are held at Columbia in the course of one academic year, this will offer a number of opportunities for each of the nine members of the committee to be present. On the occasions of each judgment the visiting members are also requested to attend classes, representative collateral work in the various branches is exhibited, all of the teaching staff are on hand to explain the method of teaching in their respective departments, and an instructor is deputed to act as academic Cicerone for the day.

We may frankly say that Columbia deserves the utmost credit for its understanding initiative in thus accepting the professional world in a definite physical sense as its pace maker. In selecting architects to be members of the Committee of Visitors the three participating architectural bodies have set their standard high. A noteworthy piece of work, quite in accord with the spirit of the day, has been undertaken and we may confidently look forward to an equally noteworthy achievement in architectural teaching. There should be no apprehension on the supposition that it is now planned to translate the school into terms of the office for there is not sufficient synonymy of purpose in the two fields, however closely they may be allied in the order of supply and demand. The school must in the final balance maintain its academic point of view; it cannot be made to assume,—except in its design branch alone,—the guise of the atelier; for the proper quantities of historic, theoretic, scientific and cultural material, not to mention untold hours of drawing, modeling and construction, must hold their place in the well rounded and closely co-ordinated system of teaching. The Committee of Visitors, then, will not attempt to govern but to advise. The technicalities of administrative control will remain as heretofore in the hands of the Administrative Board. On the other hand, the committee will call into play its hard bought experience, its knowledge of the fundamental demands of practice, as well as its cherished ideals of a great art ingrained through many qualitative tests, so that the scholastic intention may be brought to a full grasp of the objective of professional practice. Beyond the appointment of a practicing architect as director, virtually nominal, so far as his definite administrative functions concerned, or the giving of a few

lectures annually by men busy in the profession, the experiment at Columbia is, so far as we know, the first decisive step in the direction of de facto co-operation between a School of Architecture and the profession at large. We are now convinced that much good will come of it and that, as other schools adopt a similar procedure, both schools and profession will evince an increasing interest in one another's purposes and boldly we say it,—also in one another's shortcomings. The new dispensation offers the chief advantage of all co-operative plans, mutual benefits.—Curator Richard F. Bach in the "Architectural Record."

BRIDGE OF ARCHITECTURAL BEAUTY.

A Handsome Structure Planned to Span Pennypack Creek on the Northeast Boulevard.

Director Datesman, of the Philadelphia Department of Public Works, is advertising for proposals to be received June 13 for a bridge to carry Bensalem pike over Pennypack Creek, and over the drives and walks of Pennypack Park. The bridge is to be 80 feet wide and about 600 feet long, and will be the most important constructed since the completion of the Walnut lane arch. The estimated cost of the new bridge is \$200,000.

The completion of the bridge in 1917 will permit the improving of Bensalem pike from the Northeast Boulevard to Welsh road, and of Welsh road to Bustleton. This projected improvement will make the boulevard a part of the Lincoln Highway between this city and New York. Because of the importance attaching to the thoroughfare on which it is to be placed, the bridge has been planned as a massive and unusual piece of architecture.

The central span over the channel of the creek will be a semi-circular arch of 100 feet, while the adjoining spans will be 60-foot arches. North and south of these side arches concrete retaining walls will extend to points where the natural slopes of the ground rise to the level of Bensalem pike, which is about 60 feet above the creek bed.

ACCELERATES CONCRETE HARDENING.

A series of experiments was recently made by the United States Bureau of Standards for the purpose of developing a method for accelerating the hardening of concrete. The bureau found that 4 per cent. of calcium chloride added to the mixing water increases the strength of the concrete at the age of one day 100 per cent. or more. In some instances the strength of the concrete in which the calcium chloride was used at the age of two days equaled 75 per cent. or more of the strength normally attained in one month's time.

ANCHOR POST FENCES

are not the ordinary kind—they are fences of heavy galvanized netting erected on Anchor Posts—posts which won't sag or get out of line, and are galvanized both above and below ground to prevent rust.

In addition to fences and iron railings and gates of every kind we make tennis court, chicken-run and kennel-yard enclosures.

Exhibition Department

Of the

Master Builders' Exchange

18 South 7th Street, Philadelphia

Is open to the public every day except Legal Holidays and Sundays.

If you are manufacturing or handling anything pertaining to the construction or completion of a building, and you do not have it in the EXHIBITION DEPARTMENT of the BUILDERS' EXCHANGE, you should get it there AT ONCE, for that is where the people come to look for such things.

Building Materials and Appliances are there to be seen, and special care is given to explaining the merits and uses, and giving all information required.

Liquid Filler

The first Liquid Filler made and the best, answering every requirement of Nice Standard.

TRADE MARK **NICE** REG. U.S.A.

Wood Fillers are the trade's standbys. You can shoot at them from any standpoint without making any impression.

They are economical in time, labor, material; and produce wonderful results. In addition they are indispensable to every painter and finisher because of their adaptability to other uses.

A postal will bring you samples and catalogue free.

Trial set delivered upon receipt of nine 2-cent stamps.

These Documents have received the full approval of the Institute, through its Convention, Board of Directors and Officers. They are the outcome of nine years of continuous work by a Standing Committee on Contracts and Specifications. This Committee, comprising some of the ablest American architects, was assisted by the Institute's forty Chapters; advised by eminent legal specialists in contract law and aided by representatives of the Building Trade Associations of the United States. The forms have been officially approved by the National Association of Builders' Exchanges, the National Association of Master Plumbers, and the National Association of Steam and Hot Water Fitters.

CROWN-ADELPHIA

The Wonderful Little Tank Heater

Plenty of Hot water *every minute* in the day and night.
Costs but a few cents' worth of coal a day. The most satis-
factory as well as the most economical way of heating water.
Just the thing for Summer when the range fire is out.
Keeps the cellar dry also.

BUILDING LUMBER

Barrett Specification Roofs

Facts about our new 20 Year Guaranty Bond

WE ARE now prepared to give a twenty year Surety Bond Guaranty on every Barrett Specification Roof of fifty squares and over in all towns in the United States and Canada of 25,000 population and more, *and in smaller places where our inspection service is available.*

This Surety Bond will be issued by the United States Fidelity and Guaranty Company of Baltimore and will be furnished by us *without charge.*

Our only requirements are that the roofing contractor shall be approved by us, and that The Barrett Specification, dated May 1, 1916, shall be strictly followed.

We know that if this is done the roof will surely last twenty years and probably much longer.

Obviously, our inspectors will insist upon the proper quantity and quality of materials and the best workmanship being used because, *if the roof for any reason goes wrong, we alone are responsible.*

From the architect's, engineer's and buyer's standpoint, such an arrangement is ideal. They are assured of having an inspector on the roof whose only motive is to make it as good as possible.

We are notifying architects, engineers, roofing contractors and owners throughout the country of this important addition to Barrett Service.

All you have to do to secure the Guaranty Bond is to have the Barrett Specification, dated May 1, 1916, included in the building specifications and have the roofing contractors figure on that basis. The Specification of that date includes the twenty year Surety Bond provision.

If you wish any further information regarding this Guaranty, write to our nearest office and the matter will be given prompt attention.

A Copy of the Barrett Specification, with roofing diagrams, free on request.

Hannum, 16 North Georgia avenue, Atlantic City, N. J.

If you've got a specialty that will commend itself to builders, make a contract for space and start right in and talk about that specialty. Dwell on its good points, point out its advantages over similar devices, set forth its dominant qualities. And keep right on, week after week talking about it. If you don't book orders we'll bet you a big red pippin that there is either something better on the market or your specialty isn't worth a kopeck noway.

Are you aware, Mr. Advertiser, that this paper circulates in 5,000 offices, reaches every architect of any prominence in the East and the Secretary of every architectural club and chapter in the country?

Editorial Comment

At a recent meeting of the New York Society of Architects, the newly-elected President of the organization, James Riely Gordon, in taking the chair touched on a number of subjects of interest to the profession. One of these subjects was that of the registration of architects.

"Our active part in procuring the passage of the act requiring the registration of architects evidences our deep interest in the future welfare of our profession," said Mr. Gordon.

"The architects of to-day will contribute to the financial support of this act without reaping any material benefits, but the future generations of our profession will be benefited through the higher standard of compulsory education established by the Board of Examiners in their wise and judicious administration of this law.

"The architects in many States have endeavored for years to obtain the passage of an act that would afford the architects a lien for their plans and specifications, but without success. It is with pardonable pride that I can announce that this society, unaided, has at last obtained the passage of such an act in this State.

"We have an exalted code of ethics and I congratulate this society upon the fact that but one violation has been charged against a member, and that, after a thorough investigation, was not sustained.

"We have a complete code of charges and professional practice, which is now being used by many members of the profession outside of the society.

"The architectural societies have labored for many years upon a code of competitions without reaching a satisfactory solution of this momentous problem.

"I feel greatly encouraged at the efforts of this society in this direction, and hope for the early adoption of a satisfactory code of competitions.

"There is so much to be done for our future that I venture a few suggestions for your consideration. It is my sincere hope that we may be able to co-operate in that professional spirit for which we stand with all the other architectural societies, and with the building, real estate and other organizations allied with our profession."

* * *

On the subject of the indifference shown by many of the younger men in the craft to the question of accuracy in estimated costs, Mr. Gordon remarked:

"It is a lamentable fact that so little importance is attached to an architect's estimate of the cost of a proposed structure. The misrepresentations of irresponsible or ignorant architects is a deplorable condition and demands our rectification.

"An excessive cost of a building over and above the architect's estimate not only low-

cers the standard of that architect's reliability, but sometimes proves a serious embarrassment to a confiding client.

"The title of architect should imply not only a guarantee of both architectural ability and reliability, but the public has a right to expect and demand that every architect's estimate of the cost of any structure shall be sufficiently guaranteed to justify predicated financial arrangements thereon, without serious disappointment, and I trust that this society will in the near future demand that at least its members assume their full moral and financial responsibility in this respect to their clients."

* * *

Building conditions throughout the country continue to improve despite the cry of a scarcity in labor and the general advance in material costs.

Statistics compiled by William Gamble, statistician of the Philadelphia Bureau of Building Inspection, give the total cost of buildings for which permits were issued, during the month of May, as \$4,791,255. Mr. Gamble points out that while these figures show a decrease of \$1,436,555 as compared with April, they are \$1,922,415 above the figures for May of 1915.

In the total for May is embodied an expenditure of \$1,466,625 for two-story houses. It is regarded as significant that less than half a million dollars was expended upon factory construction, indicating that the totals are in no sense due to war-order prosperity, and that the building game is getting back to its normal healthy basis.

For the first five months of this year the estimated cost of buildings for which permits have been issued in Philadelphia is \$19,906,505, an increase of \$4,713,965 over the corresponding period of last year.

* * *

New York also shows a healthy activity in every line of building.

Manhattan building permits of last week total twenty-three, representing \$886,800 in estimates; eight with estimates of \$770,175 were granted in the same time a year ago. Since January 1, 249 issued in Manhattan are for buildings expected to cost \$37,229,995. The showing for the corresponding time of last year is 218, carrying \$36,096,065 in estimates.

The Bronx last week issued sixteen.

Thirty-four were granted in the same week a year ago. The accompanying estimates are respectively \$712,500 and \$1,067,100. The Bronx since the 1st of January had granted 310, carrying \$9,453,150 in estimates. In the same time a year ago 472, representing \$14,630,625 in proposed costs were issued.

In Brooklyn last week sixty-five issued represent \$400,220 in estimated costs. There were issued seventy-five with \$503,025 in

estimates during the corresponding 1915 period. Since New Year's Brooklyn had issued 2,329 for buildings expected to cost \$18,637,175. The showing for the corresponding time of last year is 2,242, with \$18,468,890 in estimates.

In Queens last week seventy-two with estimates of \$354,070 were issued. Queens granted ninety-two with estimates of \$471,280 in the same period a year ago. Since January 1 that borough had issued 2,344 for buildings to cost about \$10,134,375. In the corresponding time of 1915 Queens issued 2,302 for buildings intended to cost \$8,668,966.

Richmond during the past week granted nineteen for structures to cost approximately \$23,832. In the same time of last year twenty-nine plans for new construction, the cost of which was placed at \$16,920, were passed. In Richmond since the first of this year 381 had been issued. The showing is 446 for the same time a year ago. The attendant estimates aggregate respectively \$673,654 and \$948,471.

* * *

How many woods do you know well enough to pick out and name? Under the auspices of the National Lumber Manufacturers' Association contests involving this knowledge disclosed an amazing ignorance on the part of the public with reference to the various woods.

There were two separate contests, one containing eighteen commercial woods, for which a prize of \$10 was given for correctly naming each one of them. The other asked contestants to name correctly the samples of four of the commercial woods, for which a prize of \$1.00 was given. The wood samples were six inches long, three inches wide, and one inch thick in their natural color. Of all the thousands of guesses, however, there were but five winners of the \$10 prize and but ten winners of the \$1.00 prize.

How many varieties of wood do you think you would be able to pick out with any degree of confidence?

* * *

What becomes of all the sawdust?

A recent government bulletin sheds a somewhat interesting light on this phase of economic waste.

Sawdust is ground into "wood flour," either by means of mill stones as grain was formerly ground in old-fashioned mills, or by means of steel burr rollers, which pulverize the wood. In this form it is finding a growing use in the manufacture of dynamite and also of inlaid linoleum. Wood flour to the value of \$300,000 is used annually for these purposes. On account of the vast amount of sawdust which accumulates as a waste product in the mills, there is no lack of raw material for industries which develop a way to utilize this waste.

Wood flour is also used in making composi-

tion flooring, oat meal paper, and in several other products.

It is in special demand at the present time in ammunition factories as an absorbent in preparing dynamite for use.

For use in dynamite, the trade demands are said to require a white wood flour, since the freshness of dynamite stock is indicated by a light color.

Chemically bleached wood flour has recently come into use in making wood stucco, moldings, etc. Mixed with certain oils, some forms of sawdust and wood flour are used for floor polishing materials.

All wood-flour using industries require a white or very light cream-colored flour having good absorptive powers. The wood species that may be used are confined to the light, non-resinous conifers, and the white broad-leaved woods like poplar. Spruce, white pine and poplar are the species most used. Mill waste, free from bark, furnishes much of the raw material for making wood flour.

In the manufacture of linoleum, either wood or cork flour is used. The flour is mixed with a cementing material spread out on burlap and rolled or pressed to a uniform thickness. The cement is the expensive constituent. Cork linoleum is the cheaper because less cement is necessary. The patterns are printed on, leaving a dark base. For inlaid or straight-line linoleum, wood flour is used exclusively. Cork linoleum is always dark, and slightly more elastic than that produced from wood flour. The wearing qualities are about the same.

* * *

Wood-flour mills are scattered over the country, according to the bulletin, from Maine to California wherever the proper combination of wood and water power is available, and the domestic wood flour competes with the Norwegian product which, before the European war, was delivered at Atlantic ports for \$12.50 to \$15 per ton.

The mills of Norway which produce much of the European wood flour are of the mill stone type.

Steel burr rollers which pulverize the wood were developed on the Pacific Coast to handle sawdust as a raw material, and requires only one-fourth as much power to operate.

* * *

One of the uses to which sawdust is to be put if certain experiments now proceeding turn out to be successful contemplates its conversion into durable and satisfactory artificial flooring, especially for kitchens, where it is expected to take the place of linoleum.

* * *

Here's a little thought from that great craftsman, William Morris, that is worth pasting away for future reference:

"We ought to get to understand the value of intelligent work, the work of men's hands, guided by their brains, and to take that, though it be rough, rather than the unintelli-

gent work of machines or slaves, though it be delicate; to refuse altogether to use machine-made work unless where the nature of the thing compels it, or where the machine does what mere human suffering would otherwise have to do; to have a high standard of excellence in wares and not to accept makeshifts for the real thing, but rather to go without—to have no ornament merely for fashion's sake, but only because we really think it beautiful, otherwise to go without it; not to live in an ugly and squalid place (such as London) for the sake of mere excitement or the like, but only because our duties bind us to it—to treat the natural beauty of the earth as a holy thing not to be rashly dealt with for any consideration; to treat with the utmost care whatever of architecture and the like is left us of the times of art."

Proposals

Bonds. Improvements. Equipment.

As the Home Office and Headquarters of the Most Important Financial, Railroad, Engineering, Structural, Manufacturing and Equipment Firms in the United States, Pennsylvania offers a Particularly Rich and Productive Field for "Proposal" advertising. "The Builders' Guide" is the Only Medium in this Field.

SEALED PROPOSALS.

Philadelphia

Washed Bar Sand and Gravel will take less cement on concrete work. We know how.
DAVID FRANCE CO., Tasker Street Wharf, Delaware River, Philadelphia.

Riches can secure no better illuminant than Electric Light for the mansion, yet our rates are so low that every home—even the most modest—can afford it. Electric Light is the brightest, cleanest, most convenient and hygienic light, as well as the most economical.

If your house is not wired for Electricity, ask us for the details of our deferred payment housewiring plan.

ANCHOR POST FENCES

are not the ordinary kind—they are fences of heavy galvanized netting erected on Anchor Posts—posts which won't sag or get out of line, and are galvanized both above and below ground to prevent rust.

In addition to fences and iron railings and gates of every kind we make tennis court, chicken-run and kennel-yard enclosures.

EXHIBIT AT BUILDERS' EXCHANGE American and Dauphin Sts.
PHILADELPHIA

Exhibition Department

• Of the

Master Builders' Exchange

18 South 7th Street, Philadelphia

Is open to the public every day except Legal Holidays and Sundays.

If you are manufacturing or handling anything pertaining to the construction or completion of a building, and you do not have it in the EXHIBITION DEPARTMENT of the BUILDERS' EXCHANGE, you should get it there AT ONCE, for that is where the people come to look for such things.

Building Materials and Appliances are there to be seen, and special care is given to explaining the merits and uses, and giving all information required.

The first Liquid Filler made and the best, answering every requirement of Nice Standard.

TRADE MARK **NICE** REG. U.S.A.

Wood Fillers are the trade's standbys. You can shoot at them from any standpoint without making any impression.

They are economical in time, labor, material; and produce wonderful results. In addition they are indispensable to every painter and finisher because of their adaptability to other uses.

A postal will bring you samples and catalogue free.

The Standard Documents of the American Institute of Architects

The New Contract Documents of the American Institute of Architects are now on sale and replace the old Uniform Contract, which is to be discontinued

PRICES FOR SINGLE COPIES

Agreement and General Conditions in cover	\$.10
Bond of Suretyship	.02
Form of Subcontract	.02
Letter of Acceptance of Subcontractor's Proposal	.01
Complete set in cover	.15

Trial set delivered upon receipt of nine 2-cent stamps.

These Documents have received the full approval of the Institute, through its Convention, Board of Directors and Officers. They are the outcome of nine years of continuous work by a Standing Committee on Contracts and Specifications. This Committee, comprising some of the ablest American architects, was assisted by the Institute's forty Chapters; advised by eminent legal specialists in contract law and aided by representatives of the Building Trade Associations of the United States. The forms have been officially approved by the National Association of Builders' Exchanges, the National Association of Master Plumbers, and the National Association of Steam and Hot Water Fitters.

Editorial Comment

A casual reference, in a recent number of THE GUIDE, commenting upon the singularity of the action of the Philadelphia Art Alliance in going to Boston for an architect to design its new building on Rittenhouse Square, is answered in the course of an article dealing with the plans of the Alliance in a daily newspaper.

The plans, it now appears, were prepared by Cram & Ferguson, of Boston, and after a number of changes, the result of suggestions advanced by art organizations which will make use of the building, have finally been pronounced satisfactory.

"The awarding of the task of planning the Art Alliance Building to Cram & Ferguson, a Boston firm of architects, brings to light an interesting story," observes the writer of the newspaper article. "When those interested in the project of erecting a building for the Art Alliance decided that the auditorium should be Gothic in architecture, they placed the problem of selecting the proper architect in the hands of B. F. Medary, because he was at that time President of the Philadelphia Chapter of the American Institute of Architects. Mr. Medary appointed a committee to act with him, consisting of Frank Miles Day and Miss Violet Oakley.

"This committee was merely instructed that the style of architecture of the building was to be Gothic, and the best possible work was to be secured. The members of the Architects' Committee voted as a unit for Cram & Ferguson, stating that Mr. Cram's pre-eminence in the type of architecture desired rendered any other choice impossible."

* * *

In the wisdom of the decision THE GUIDE most cheerfully acquiesces. There can be, we imagine, no two opinions as to the eminence of Mr. Cram in the Gothic type, and as the committee was advised that the building was to be Gothic, and the best possible work secured, Messrs. Medary and Day and Miss Oakley could perhaps have done nothing other than to recommend the foremost American expositor of that type.

And yet, conceding all this, THE GUIDE finds itself unable to express other than regret that the preliminaries leading up to the selection of an architect to design a building,—which we take it, is intended to represent artistic Philadelphia at its best,—were not otherwise ordered; were not so ordered in fact as to emphasize Philadelphia's ability to provide such a building without going outside of its own generous boundaries to find the necessary talent.

We are still inclined to think, extending every deference due the admitted abilities of Mr. Cram, that the new building of the Philadelphia Art Alliance could have been designed here in Philadelphia without losing measur-

ably whether in artistic distinction or fidelity to type.

There is a suggestion of humiliation in the thought that artistic Philadelphia, united in a project of this kind, has not found it possible to secure that order of talent required within its own borders.

There is, at the same time, a most delightful and gratifying recognition involved of the spirit of *noblesse oblige*, as that spirit is interpreted by men of the highest artistic standing.

Mr. Day's explanation that, inasmuch as the type selected was Gothic with the stipulation that the work should be "of the best" there was no other course open to the committee but the designation of Mr. Cram, amounts to a pretty tribute to the Boston man's mastery of this order of design.

* * *

According to the plans, the architecture of the main auditorium is to be Gothic in character, of the old English type. The main building will be Elizabethan, with a gabled front opening off an open court, walled in on three sides by low-facaded outbuildings. These outbuildings will be in the form of a U, two stories in height. The base of the U, which will front on the street, will be occupied on the ground floor by two small shops, one on either side of the main entrance, while the arms of the U, which will abut on the main building, will be given over to shady cloisters, where chairs will be provided for lounging in pleasant weather. The entire second floor of the outbuilding surrounding the court will be given over to the Art Alliance restaurant quarters and galleries.

The main building will be seven stories in height, with a tall, gabled roof and a profusion of gothic ornamentation. The first, second and third floors will be occupied principally by the main auditorium, which has been designed especially with a view of securing the best possible acoustic properties, and will seat in the neighborhood of one thousand. Provisions have been made so that there will be an abundance of box accommodations, and unusual care has been exercised in designing the structure so that every seat will command a full view of the stage. Care has also been devoted to providing unusually commodious and comfortable dressing room accommodations for the actors who will appear upon the stage.

* * *

The fourth and fifth floors will accommodate a spacious ballroom, with an elevated stage and galleries, capable of being converted into an auditorium suitable for chamber music, and for many kinds of musical and artistic performance which cannot be rendered to advantage in a large auditorium, or one not suited to their particular necessities. According to local authorities, there is a particular need for such an auditorium in this city, be-

Buy pure lime, 99% pure, no core, no grit. DAVID FRANCE CO.,
Tasker Street Wharf, Delaware River, Phila. Both 'phones.

cause many of the foremost artists in the sphere of chamber music cannot be brought here because it is impossible to secure satisfactory accommodations.

The sixth floor will be divided up into rehearsal rooms. The seventh floor will accommodate a large banquet hall, an art gallery with skylight capable of being turned into a roof-garden in summer, office rooms for the Alliance and other organizations using the building.

Copies of the plans were sent to the presidents of 41 art organizations which are co-operating in the establishment of the Alliance and whose members will be served by it when it is completed. The plans in their present form have already been inspected by many of the presidents of organizations to whom they are being sent and by the Art Alliance Committees. It is believed that they will prove in the main satisfactory to all. The present step is being taken, however, so that all may be afforded a final opportunity for criticism or approval.

* * *

Building took a big step forward last month, and the total value of the construction planned in that month, as reported to *Bradstreet's* from 132 cities, far exceeded any previous month in the country's history. Only one month of the past, April, 1912, showed a total above \$100,000,000, and the aggregate for May this year—\$107,831,013—dwarfs this, with some twenty-three more cities not yet reported. Additionally interesting, too, is the fact that the numbers of permits show large gains over the like month of last year, and only two groups fail to show a larger number of permits, while every one of them reports larger values than a year ago.

There are 28,544 permits recorded at 132 cities in May, an increase of 14.1 per cent., while the value of the building permitted for shows a gain of 36.6 per cent. Compared with the largest month's building ever heretofore recorded, there is an increase of nearly 5 per cent.

The percentage of increase in value over May a year ago is the heaviest recorded in any month this year, and eighty-seven out of 132 cities show gains in values as compared with the like month last year.

An additionally interesting feature is that the addition of the large May total to previous months' returns puts this year well up in the scale of building expenditure, with the probability that 1916, which so far shows a gain over last year of 22.3 per cent., may surpass all previous records for the full calendar year.

* * *

Most important cities show good gains for May. New York reports an increase of only 12.8 per cent., but Chicago gains 73 per cent., Philadelphia 67 per cent., Pittsburgh 19.5 per cent., Detroit 124 per cent., Indianapolis and Minneapolis 74 per cent. each, Hartford, 61.7 per cent., Los Angeles 18 per cent., San Fran-

cisco 72 per cent., Washington 31.4 per cent., Baltimore 76.8 per cent. and Kansas City 37 per cent. In the list of decreases, St. Louis with 7.3 per cent., Bridgeport with 50 per cent., Buffalo with 5.4 per cent., Newark, N. J., with 14 per cent., Cleveland with 47.8 per cent., and Milwaukee with 14.4 per cent. loss, are prominent. Duluth shows a very large gain owing to the filing of a blanket permit by large steel interests, which have established a new steel making centre there.

* * *

The preliminary examination for the John Stewardson memorial scholarship, held at the University of Pennsylvania to select five men and two alternates for the final competition, resulted in the following men being chosen: William Pope Barney and John F. Harbeson, both of the University of Pennsylvania, and E. F. Griffith, H. L. Rubin and R. S. Simpson, students of the Carnegie Institute of Technology. The two alternates were Brooks Lister and Lancelot W. Suckert, of the University of Pennsylvania.

The competition calls for a \$1000 prize, to be used by a traveling scholar in architecture, and is open to any person under 30 years of age who has been engaged in the practice of architecture in the State of Pennsylvania at least one year prior to the date of the examination.

This year's problem is most pretentious and calls for a military center. In outline the program states:

"The historic centers of Europe have for centuries fostered a spirit of patriotism and devotion to the fatherland by holding prominently before the eyes of the populace material evidence of the former valor of heroes whose deeds have reared the standard of national strength, fame and glory.

"In such a monument as the Invalides, at Paris, the purpose was manifest. Realizing this and believing that true preparedness can only come about through the growth in Americans of deep love for their country and pride in her greatness, a wealthy patriot has given the grounds and funds for a military center in the vicinity of one of our most important cities.

"The whole undertaking includes space for a summer drilling camp, but the subject of the present competitions comprise only the more permanent and monumental portion of the group."

The main divisions are as follows:

1. Administration.
2. Hall of Fame and Historical Military Museum.
3. Veterans' Home.
4. Park.

Detailed descriptions of the site and each of the buildings are included.

The preliminary sketches were exclusively the work of the authors, both as to design and drawing, and will be executed without assistance of any kind. In the development of the

design and the rendering of the final drawings the competitor may consult documents and receive criticism, but in the preparation of the drawings he is to have no assistance except of a mechanical nature.

Thirty men competed for the coveted prize throughout the State and the drawings were judged at the University of Pennsylvania by a jury composed of the following architects: George B. Bickley, Paul A. Davis, 3d, George Howe, W. Powell Robins and Edgar V. Seeler.

ARCHITECTURAL NOTES.

The Illinois Society of Architects has just undertaken another important standardization of building material and workmanship—namely, that of plastering and lathing—says the *American Contractor*, which adds:

"To that end it has invited the co-operation of the Plaster Contractors' Association, the Plaster Material Manufacturers, the Expanded Metal Lath League, the Gypsum Plaster Association, the Lime Manufacturers' Association, the wood lathing manufacturers and lathing contractors in preparing standardized specification of material and labor to be used by architects and to be known as Illinois Standard Specifications. The idea is to prepare specifications which will be sufficiently descriptive from a technical standpoint to guarantee the quality of workmanship and material without the use of trade names so as to make perfectly open specifications for all legitimate dealers and contractors in material and workmanship.

* * *

"The Illinois Society of Architects, it will be remembered, adopted a few weeks ago standard specifications for structural lumber. The present project is one of considerable more difficulty but of no less importance, and if it succeeds there are intimations that the work of standardization may be extended to various other kinds of material used in construction.

"There is much to be said for the proposition from the standpoint of the architect. The adoption of standard specifications would relieve him of considerable detail work and of the necessity of working out specifications over and over again for successive commissions. It would eliminate many controversies and insure to the owner a construction of standard quality.

"So far as expressions have been obtained from manufacturers of material, one of the great benefits that would result would be the elimination of sharp competition on the part

DEPENDABLE
BUILDING CONSTRUCTION

1215 Filbert Street

Philadelphia

Washed Bar Sand and Gravel will take less cement on concrete work. We know how.
DAVID FRANCE CO., Tasker Street Wharf, Delaware River, Philadelphia.

Riches can secure no better illuminant than Electric Light for the mansion, yet our rates are so low that every home—even the most modest—can afford it. Electric Light is the brightest, cleanest, most convenient and hygienic light, as well as the most economical.

If your house is not wired for Electricity, ask us for the details of our deferred payment housewiring plan.

of contractors, who might detect in a specification some incomplete definition which would permit them to substitute a cheaper material and one not contemplated. One of the difficulties that may be presented is the extent of the guarantee of the manufacturer, for the matter of workmanship is involved and it is results that the plan contemplates. And it is possible that in close cases the national bureau of standards may be called upon to establish precedents. But the prospective benefits are so great that the committee is beginning its undertaking with a great deal of enthusiasm.

* * *

"Speaking of these benefits, Emery Stanford Hall, who introduced the measure at the meeting of the Illinois Society of Architects, says:

"It is not always easy to clearly convey in written form the ideas in one man's mind to the minds of other men of wholly different ideals and experiences. The use of standard specifications would allow contractors and material men by experience to become familiar with the exact requirements of specifications and would therefore put them in a position to quickly and accurately rate costs on work submitted to them for estimates."

The world is just chock full of men who failed because they expected buyers to romp right in and ask for goods. Modern business spends big money simply to get the buyer interested knowing that sales follow.

MARYLAND CONSTRUCTION NEWS.

(Continued from Page 399.)

Law Building, Baltimore, Md. Owner, William Pepper Constable, 700 Maryland Trust Building, Baltimore, Md. Brick, 2½ stories, slate roof, hot water heating, electric lighting, tile work. Plans about completed. Architect ready for bids.

ANCHOR POST FENCES

are not the ordinary kind—they are fences of heavy galvanized netting erected on Anchor Posts—posts which won't sag or get out of line, and are galvanized both above and below ground to prevent rust.

In addition to fences and iron railings and gates of every kind we make tennis court, chicken-run and kennel-yard enclosures.

Exhibition Department

Of the

Master Builders' Exchange

18 South 7th Street, Philadelphia

Is open to the public every day except Legal Holidays and Sundays.

If you are manufacturing or handling anything pertaining to the construction or completion of a building, and you do not have it in the EXHIBITION DEPARTMENT of the BUILDERS' EXCHANGE, you should get it there AT ONCE, for that is where the people come to look for such things.

Building Materials and Appliances are there to be seen, and special care is given to explaining the merits and uses, and giving all information required.

The first Liquid Filler made and the best, answering every requirement of Nice Standard.

TRADE MARK **NICE** REG. U.S.A.

Wood Fillers are the trade's stand-bys. You can shoot at them from any standpoint without making any impression.

They are economical in time, labor, material; and produce wonderful results. In addition they are indispensable to every painter and finisher because of their adaptability to other uses.

A postal will bring you samples and catalogue free.

The Standard Documents of the American Institute of Architects

The New Contract Documents of the American Institute of Architects are now on sale and replace the old Uniform Contract, which is to be discontinued

PRICES FOR SINGLE COPIES

Agreement and General Conditions in cover	\$.10
Bond of Suretyship	02
Form of Subcontract	02
Letter of Acceptance of Subcontractor's Proposal	01
Complete set in cover	15

Trial set delivered upon receipt of nine 2-cent stamps.

These Documents have received the full approval of the Institute, through its Convention, Board of Directors and Officers. They are the outcome of nine years of continuous work by a Standing Committee on Contracts and Specifications. This Committee, comprising some of the ablest American architects, was assisted by the Institute's forty Chapters; advised by eminent legal specialists in contract law and aided by representatives of the Building Trade Associations of the United States. The forms have been officially approved by the National Association of Builders' Exchanges, the National Association of Master Plumbers, and the National Association of Steam and Hot Water Fitters.

CROWN-ADELPHIA

The Wonderful Little Tank Heater

Plenty of Hot water *every minute* in the day and night.
Costs but a few cents' worth of coal a day. The most satis-
factory as well as the most economical way of heating water.

Just the thing for Summer when the range fire is out.
Keeps the cellar dry also.

Lots of men don't advertise because they cherish an idea it's too expensive. As a matter of fact, it's the cheapest good investment a man can put his money in, as hundreds of successful men have learned.

Don't lose your grip. Noah was 600 years old before he knew how to build an ark.

Editorial Comment

Charles Harris Whitaker has an open letter in the "Journal" of the American Institute of Architects that sets forth with convincing clarity and comprehensiveness the case of the architectural profession against Congress in the matter of the question of public buildings.

According to Mr. Whitaker, it is the belief of the Institute—the great body of it—that the public building methods of the Congress are now and have been in the past based, not upon the primal requirement which should govern the erection of any building, but upon a method of appropriation which was operated to encourage grass extravagance and which was susceptible of being considered a political expedient rather than a proceeding based upon the public welfare as a whole.

On the other hand, Mr. Whitaker explains, it is the general belief of Congress that the American Institute of Architects is an organization with a selfish purpose. "It believes," Mr. Whitaker says, "that the Institute is a sort of trust or conspiracy to compel the payment of an unjustifiable fee for professional services.

"These beliefs," he continues, "stand in the way of any possibility of such mutual relation as ought to exist. For no man can deny that the talent and experience and wisdom and loyalty and unselfishness of the architects of the United States ought to be at the disposition of Congress. Nor can any man deny that the Congress ought to be willing and eager to avail itself of such a service. Such a condition is prerequisite to any sound, wise, economic and truly American architectural development of the public buildings of the nation.

* * *

"The Institute, like Congress, stands for something above and beyond the petty selfishness of any of its members. The Institute is not concerned with securing work for any individual of any group. The Institute does not care who builds the buildings for the Government, so long as they are beyond reproach as to economy, beauty, and utility. Yet, as the very men who are best fitted to build such buildings for the Government are members of its body, how can it escape the accusation of selfishness when it urges a change in the present method?

"As we have said, the distrust is not all on one side. It is common belief that many members of the Congress are more deeply interested in securing costly public buildings for their constituency than they are in assuming their responsibility to the nation in such a matter. Yet they do not represent the real principle of the Congress. They are not a part of it. Disguised as national servants, they act as private ambassadors. Yet the real Congress does not want what they want. It stands for better things. But out of all these

factors there creep the ugly generalizations which have caused the Institute to be branded as a trust and Congress to be assailed as more devoted to the 'pork barrel' than to the national good when it deals with the public building question."

* * *

The first step toward the improvement of this situation, according to Mr. Whitaker, would be the appointment by Congress of a Public Building Commission, to be composed of not less than three architects of recognized ability and experience and three members of Congress, with a representative of the Treasury department. The task of this commission, he declares, should be a comprehensive report on the following:

"In what manner can suitable preliminary estimates of the size, type and cost of all Government buildings be readily made and presented for the consideration of Congress prior to the making of any appropriation?

"In what manner, if any, can provision be made for utilizing the creative genius of the architects of the United States in the erection of Government buildings?

"In what manner can the Government most widely inaugurate a public building program for the capital, which shall make adequate provision for present and future departmental requirements, end the present policy of encouraging private capital to erect incongruous office buildings, and avoid as far as possible any sudden disturbance of the false real estate values which have been created by the policy of renting rather than erecting buildings?

"In what manner can the nation best provide that all of its buildings enterprises shall be supervised by an authority competent to see that they shall be suitable in design and harmonious with their environments?"

* * *

Such a program, Mr. Whitaker declares, is neither too imposing nor too difficult. "Competent men," he concludes, "can be found for the purpose, and the results of their labor would repay the expenditure many times over in the savings which would ensue, and thousands upon thousands of times over in the inevitable beneficial effect upon the citizenship and the culture of the nation."

* * *

The public building bills introduced into the Sixty-fourth Congress are discussed in the Journal of the American Institute of Architects as follows:

"To understand the present public building policy of the United States it is necessary to begin with the whole list of public building bills introduced into Congress. Upon this subject there have been many generalizations in the past, and very recently public opinion has been aroused by articles in the press. Such articles were based upon the final action of Congress, but thoroughly to understand that

final action, one must view the process as we are presenting it in this issue of the Journal.

"Up to and including May 23, 1916, more than 700 public building bills had been presented to Congress. Of these some 60 were concerned with additions or improvements, and they are not dealt with in the list. The total sum of the appropriations asked for is about \$100,000,000.

"If the Committee on Public Buildings and Grounds of the House, to which all bills presented in the House are referred, should decide to bring in a general public building bill, as has been done in the past, it alone has any idea of what the character of that bill may be. To speak plainly, it seems evident upon a study of these bills that a deplorably large number represent a betrayal of the public trust reposing in their sponsors. The figures are too eloquent to require comment."

* * *

Among the public building bills introduced into the Sixty-fourth Congress were those regarding a new post office site, a new post office building and a new clearing house site for this city, calling for appropriations of \$2,000,000, \$5,000,000 and \$2,000,000, respectively. Also, among the bills affecting Pennsylvania was one for a new post office site at Pittsburgh, calling for an appropriation of \$2,500,000. These, however, are merely the ones in which large sums of money are involved. There are any number which run into the thousands and hundreds of thousands of dollars.

As relating to New York, there was a bill for a new post office site at Brooklyn, calling for an appropriation of \$3,500,000, and a new post office site for the Bronx part of New York City, calling for an appropriation of \$1,000,000.

There were three bills calling for appropriations of \$250,000 each for the purchase of new post office sites in New Jersey.

* * *

Cabot Ward, President of the New York Park Board, is a gentleman of some courage and aggressiveness as well as a man of taste. Commenting on the frequency with which proposals are made to locate statues and other works of "art" in the City Hall Park in New York City, Mr. Ward remarks that had all of these proposals been accepted during the past two years the park itself would not only have been completely filled, but it would present the appearance of a corner of Woodlawn Cemetery.

Mr. Ward holds positive views on the subject of what is good and bad in the monumental category, as the following list goes to show:

Twelve good statues in New York parks are named as follows:

Statue of Nathan Hale in City Hall Park; The Indian Hunter, in Central Park; Auguste Cain's "Tigress and Cubs," Kenny's "Still Hunt," statue of William Cullen Bryant, DePeyster Monument on the Bowling Green,

statue of Lafayette in Union Square, the Faragut Memorial, equestrian statue of Washington, but of Holley in Washington Square, the Hunt Memorial, statue of Gen. Sherman.

The following twelve are called monstrosities:

Garibaldi Monument in Washington Square, the statue of Verdi, bust of Mazzini in Central Park, Sunset Cox in Astor Place, statue of Halleck in the Mall, the Burns Monument, Daniel Webster in Central Park, the Greeley statue in Greeley Square, Scott Monument in the Mall, the statue of Simon Bolivar, Dodge statue in Herald Square, bust of Schiller in Central Park.

* * *

In this connection it might not here be amiss to refer to the suggestion to remove the statue of Joseph Leidy now fenced in pending subway excavations at Philadelphia's City Hall to Logan Square. Just why this Leidy statue was not set up in the first place in the grounds of the University of Pennsylvania, where, properly, it belongs, most persons will confess a curiosity to learn. The tendency to stick up monuments and memorials about the City Hall that are out of key with the general environment is one that we trust will have the attention of the Art Jury.

A splendid example of the injudicious placing of memorials of the kind is the Barry statue in Independence Square. At an expense of thousands of dollars the old buildings and the square are being restored to the appearance they presented in colonial days. In this restoration the Barry statue sounds a distinctly discordant note. That Philadelphia should honor the doughty first commodore of the Revolutionary navy no one will venture to question. To plant this Barry statue right in the middle of the square is, however, at least, of doubtful propriety. It has prevented, for one thing, the complete restoration of the most historic spot of ground in these United States.

* * *

Realizing the large annual losses sustained by thousands of home owners through construction which tends to spread fires instead of retarding them, the Committee on Construction of Buildings of the National Board of Fire Underwriters has issued a booklet of 115 pages on methods of increasing the fire-resistive qualities of dwellings, says "Engineering Record." Builders everywhere, especially in localities outside the control of building ordinances (and by far the majority of ordinary dwellings are built in such localities), will find valuable information in this presentation of methods for making houses reasonably safe from fire. Particularly important, not only for builders, but for owners and the general public, are the section devoted to floor and roof construction; chimneys, flues, smoke-pipes and fireplaces; fire stopping and general precautions for fire protection.

Generally recognized dangers from such old offenders as shingle roofs, unlined chim-

neys, unprotected stairways and shafts are strikingly illustrated, and many simple and effective, while relatively inexpensive, devices in construction which retard the spread of fire are clearly explained. Every potential house owner will find it profitable to become familiar with these building precautions, which may prevent loss of life as well as of property. Engineers, through their positions in building departments and their participation as plain citizens in civic associations, chambers of commerce and similar organizations, can let it be known that ordinary dwellings can readily be improved as to their fire-resistive qualities, and can direct interested parties to the proper source of information.

The General Fireproofing Company, of Youngstown, Ohio, have opened a branch office in the Pennsylvania Building, Fifteenth and Chestnut streets, Philadelphia, Pa., under the management of Mr. Charles Johnston. A move of this kind by so well-known a manufacturer as the General Fireproofing Company is an indication of the growing importance of Philadelphia as a center for the distribution of fireproofing and fire-retarding materials. Until the past few months the General Fireproofing Company have distributed their products through jobbers, which has proven unsatisfactory, and henceforth the consumer will deal directly with the local representative of the factory. The Philadelphia office will have an engineering force for the benefit of architects and contractors in designing and construction of fireproofing buildings.

If your proposition is one that should appeal to architects, builders, building owners, decorators, material and supply concerns, "The Builders' Guide" is the right medium for your advertising and cannot fail to bring you profitable returns.

A DROP OF INK.

A drop of printer's ink
May make a thousand think.
A single drop
May keep your shop
From getting on the blink.

A drop, when hardly dry,
Makes many people buy.
It helps your biz',
And therefore is
A goodly thing to try.

DEPENDABLE
BUILDING CONSTRUCTION

1215 Filbert Street

Philadelphia

Washed Bar Sand and Gravel will take less cement on concrete work. We know how.
DAVID FRANCE CO., Tasker Street Wharf, Delaware River, Philadelphia.

Riches can secure no better illuminant than Electric Light for the mansion, yet our rates are so low that every home—even the most modest—can afford it. Electric Light is the brightest, cleanest, most convenient and hygienic light, as well as the most economical.

If your house is not wired for Electricity, ask us for the details of our deferred payment housewiring plan.

PERMITS FOR NEW BUILDINGS.

(Continued from page 415.)

Wm. T. Field (O and C), Forty-seventh and Spruce streets. Cost, \$73,800. Fourteen dwellings, brick, slag roofs, hot water heating. Two dwellings, 16x55 feet, Forty-sixth and Locust streets. Twelve dwellings, 16x55 feet, Forty-sixth and Locust streets.

Jos. Reale (O), 1440 South Second street. Samuel D. DiMarzo (C), 1208 South Eighth street. Cost, \$2,100. Dwelling, brick, 3 stories, 15x59 feet, hot air heating, 1440 South Second street.

John Craig (O and C), 8521 Germantown avenue. Cost, \$7,000. Two dwellings, stone, 3 stories, 16x47 feet, hot water heating, slate and slag roofs, Graners lane and Ardleigh street, Germantown.

T. L. Bryon (O), Land Title Building. E. E. Cullen, Jr. (C), 1420 Chestnut street. Cost, \$14,000. Four dwellings, brick, 16x34 feet, hot water heating, tin and slag roof, Sherman and Pamana streets.

J. Charles Yundt (O and C), 301 Tabor road. Eight dwellings, brick, 2 stories, hot water heating, felt roofs. Four dwellings, 14x44 feet, Third and Clarkson avenue. One dwelling, 14x42 feet, Third and Clarkson avenue. Three dwellings, 15x44 feet, Second and Clarkson avenue.

There's one variety of advertiser who gets our Angora. This is the chap who can't afford a large space and doesn't advertise, as a regular thing, because a small space "isn't seen." Some of the biggest advertisers we have started out with small space. Ask them whether the small space is seen. If advertisers had to wait until their businesses developed to full page stature before advertising, there'd be mighty few advertisers. The big man becomes big by growth. And growth starts with the seed.

Alterations and Additions

Ferdinand Kellar (O), 1416 South Penn Square. Basch Co. (C), 1436 South Front street. Cost, \$700. Store, brick, general alterations and repairs, 1416 South Penn Square, Philadelphia.

P. R. R. Co. (O and C), Broad Street Station. Cost, \$1,200. Building, brick, 1 story, 17x22 feet, slag roof, Thirty-first and Chestnut streets.

Board of Education (O), Nineteenth above Chestnut street. Standard Construction Co. (C), 822 Drexel Building. Cost, \$5,900. School, stone, enlarging closs windows, Sixtieth and Cedar avenue.

Board of Education (O), Nineteenth above Chestnut street. Standard Construction Co. (C), 822 Drexel Building. Cost, \$6,000. School, stone, new fire escapes and enlarging windows, Front and Christian streets.

Kenin Shapiro & Chadwick (O and C), 6030 Market street. Cost, \$4,000. Ten garages, brick, 1 story, 13x18 feet, Tulpehockin and Osceola avenue.

Texas Co. (O and C), Morris Building. Cost \$700. Office, steel and glass, 1 story, 10x15 feet, Castor avenue and Boulevard, Philadelphia.

Texas Co. (O and C), Morris Building. Cost, \$600. Dwelling, steel and iron, 1 story, 10x15 feet, McKean street and Commercial avenue.

Phila. Sign Co. (C), 1315 South Eleventh street. Sign, angle iron structure and anchorage, 28x150 feet, Broad and Walnut streets.

A. Branc (O), 226 N. Illinois avenue, Atlantic City. Geo. C. Grosse (C), 511 North Indiana avenue, Atlantic City, N. J. Cost, \$1,000. Dwelling, brick, general alterations, 1137 Lombard street, Philadelphia.

Conrad Buck (O), Edmund and Bridge streets. Haas & Doettling (C), 2126 North Fourth street. Cost, \$600. Garage, brick, 16 x22 feet, Edmund and Bridge streets.

Home for Homeless (O), 1327 Fitzwater st. Wilbert O. Spunger (C), 1624 Latimer street. Cost, \$1,400. Home, brick, second-story addition, 19x24 feet, and toilet additions, 1327 Fitzwater street.

Morris Wenger (O), 1229 Walnut street. Cementite Paving Co. (C), Drexel Building. Cost, \$4,000. Store, brick, erect elevator shaft to first floor and general alterations, 1229 Walnut street.

Friends Almshouse Estate (O), Walnut Place. R. C. Ballinger & Co. (C), 218 North Twelfth street. Cost, \$1,500. Brick, 1 story rear addition, 50x13 feet, slag roof, 318 to 22 Walnut street.

Schugael (O), 4217 Germantown avenue. Wm. Clifford (C), 4420 North Sixteenth street. Store and dwelling, brick, general alterations, 4123 Germantown avenue.

J. M. Thompson (O), 3260 Ludlow street. S. M. Wilson (C), 4072 Haverford avenue. Cost, \$500. Hot water heating, 3216 Woodland avenue.

W. S. Peace (O), Seventieth avenue. C. E. Lloyd, Jr. (C), Oak Lane. Cost, \$900. Garage, frame, 19x21 feet, slate roof, Seventieth avenue and Twelfth street.

Gustau Wrie (O), 433 Northeast Boulevard. Joseph Seen Co. (C), 1530 South Sixth street. Cost, \$1,350. Garage, brick, 30x110 feet, and general alterations, 835-7 Morris street.

W. S. Miller (O), 2307 South street. Philip Savor (C), 713 Snyder avenue. Cost, \$2,100. Building, brick, 2 stories, rear addition, 19x

41 feet, slag roof, 2312 South street.

B. Finhery (O), 717 Walnut street. A Barsky (C), 636 Pine street. Cost, \$500. Store, brick, rebuild rear and side walls, 504 North Second street.

Michael Gugiewicz (O), 134 Roxborough st. John J. Hurley (C), 4416 Cresson street. Cost, \$600. Dwellings, brick, 2 stories, rear addition, 12x16 feet, tin roof, 127 Walnut Lane, Germantown.

Air Reduction Co. (O), Germantown and Sedgley avenues. Wm. Steel & Sons (C), 1600 Arch street. Cost, \$2,000. Concrete railroad trestle, southeast corner Germantown and Sedgley avenues.

Thomas Collins (O), 150 West Horter street. Stokes Bros. (C), 6723 Musgrave street. Cost, \$500. Brick, 1 story, 14x8 feet, 150 West Horter street.

M. Jennings (O), Fifth and Washington avenue. Specialty Engr. Co. (C), Allegheny and Trenton avenues. Cost, \$8,000. 2000-ton coal pocket, 35x120 feet, on trestle, Fifth and Washington avenue.

M. Portuondo (O), 3223 Chestnut street. Geo. C. Dougherty (C), 1725 Ludlow street. Cost, \$1,400. Dwelling, brick, 1 story rear addition, 15x22 feet, 3223 Chestnut street.

Thos .C. Duffey (O and C), 302 N. Frazier street. Cost, \$1,000. Garage, brick, 1 story, 31x50 feet, 304-6 North Frazier street.

John N. Steen (O), 2416 North Fifty-fourth street. Jas. Y. Rippin (C), Fifty-fourth and Wynnefield avenue. Cost, \$500. Garage, hollow tile, 12x18 feet, 1 story, slag roof, Fifty-fourth and Overbrook avenue.

Miss Thompson (O), 2118 North Nineteenth street. Diamond Building Co. (C), 1811 Columbia avenue. Cost, \$500. Second and third story rear porch, 12x8 feet, 2118 North Nineteenth street.

F. & E. Anbel (O and C), 2503 Germantown avenue. Cost, \$500. Storage, brick, 1 story addition, 18x40 feet, 2504-06 Cadwallader st.

G. Sanicolo (O and C), 1135 South Fifth street. Cost, \$700. Store, brick, general alterations and repairs, 1135 South Nineteenth street.

The Barrett Co. (O), Frankford, Philadelphia. A. L. Carhart (C), 1326 Chestnut street. Cost, \$8,500. Building, brick, two 1-story buildings, 60x70 feet, as plans. Stiles and Wakeling streets.

Wm. Buholz (O), northwest corner Twentieth and Arch streets. Wm. N. Thompson (C), 1529 Filbert street. Cost, \$1,150. Building, brick, repair fire damage, northwest corner Twentieth and Arch streets.

G. Diliceo (O), 4962 Kreshaw avenue. Sebastian & Grilli (C), 1340 Ellsworth street. Cost, \$500. Dwelling, brick, 2 story rear addition, 16x11 feet, 4962 Kreshaw avenue.

John R. Wilson (O and C), 5644 Greenway avenue. Cost, \$1,000. Garage, brick, 1 story, 320x16 feet, Fifty-sixth and Greenway avenue.

Jacob and Anna Forman (O), 2747 Germantown avenue. Frank I. Wintz (C), 1618 North Twenty-seventh street. Cost, \$2,600. Store and dwelling, brick, 1 story side addition, 3x12 feet, second-story rear addition, 12 x21 feet, hot water heating, 2747 Germantown avenue.

Sam. W. Pavonarius (O), 6121 Columbia avenue. Frank I. Wintz (C), 1618 N. Twenty-seventh street. Cost, \$1,100. Garage, brick, 1 story, 25x31 feet, slag roof, 6121 Columbia avenue.

We have pebbles all sizes. Cost less than what you are using. DAVID FRANCE CO., Tasker Street Wharf, Delaware River, Philadelphia.

E. A. Muckle (O), 2008 E. Cheltenham avenue. Thos. J. Carberry (C), 1215 Filbert street. Cost, \$1,190. Dwelling, brick, 1 story, front addition, 16x20 feet, 4-ply slag roof, 2008 E. Cheltenham avenue.

Chas. & Nachod Brewing Co. (O), Tenth and Montgomery Avenue. Henry P. Schneider (C), 3713 York road. Cost, \$1,000. Hotel, brick, general alterations, 631-33 Arch street.

Penna. R. R. Co. (O), Broad Street Station. Chas. McCaul Co. (C), 1715 Sansom street. Cost, \$20,000. New elevator hatch, brick, Seventeenth and Filbert street.

Alfred S. Powell (O), 1313 Fairmount avenue. H. Rensswick (C), 137 North Tenth street. Cost, \$1,500. Building, brick, 1 story addition, 18x62 feet, 1308 Olive street.

White Rock Baptist Church (O), 612 North Thirty-sixth street. Robert W. Groff Co. (C), 721 North Forty-fifth street. Cost, \$1,500. Church, brick, general alterations and repairs, 705 and 7 North Forty-fifth street.

Bell Bakery Co. (O), Belgrade and Allegheny avenue. A. Raymond Raff Const. Co. (C), 1635 Thompson street. Cost, \$1,000. Building, brick, room 22x17 feet, wire lath and plaster, Belgrade and Allegheny avenue.

Pearl Kurtz (O), Howard and Girard avenue. A. Raymond Raff Const. Co. (C), 1635 Thompson street. Cost, \$500. Repair fire damage, Howard and Girard avenue.

W. E. Gibson (O), 125 South Eleventh st. A. Raymond Raff Const. Co. (C), 1635 Thompson street. Cost, \$500. Building, brick, repair fire damage, 125 South Eleventh street.

Frederick L. Leeds (O and C), 5134 Columbia avenue. Cost, \$500. Garage, brick, 12x18 feet, 1 story, tile roof, 5134 Columbia avenue.

Bennett & Aspden (O), 4347 Manayunk avenue. C. M. Swortley (C), 6835 Ridge avenue. Cost, \$900. Garage, brick, 1 story, 27x22 feet, Pechen and Krams avenue.

Francis C. Fitzpatrick (O), 5347 Lansdowne avenue. Frank A. Fitzpatrick (C), 1525-27 N. Sixtieth street. Cost, \$1,000. Dwelling, brick, third-story rear addition, 16x16 feet, 16x16 feet, 1539-41 North Sixtieth street.

J. F. Betz Estate (O), Continental Equit-

able Trust Co. John McShane (C), 1610 North street. Cost, \$600. Store, brick, general alterations and repairs, southwest corner Broad and Girard avenue.

Samuel Brabelsky (O), 208 Delancey st. Nathan Resinsky (C), 520 Dickinson street. Cost, \$545. Store, brick, general repairs and alterations, 208 Delancey street.

C. W. Eltonhead (O), 320 South Front st. H. C. Dahl (C), 231 South Eighth street. Cost, \$600. Warehouse, brick, 1 story side addition, 33x38 feet, 108-10 Spruce street.

Stellwagon Mfg. Co. (O), southwest corner Nineteenth and Washington avenue. J. B. Jordan (C), 1335 South Fifty-eighth street. Storehouse, brick, 1 story, 30x108 feet, as plans, Second and York streets.

Poor Richard Club (O), Camac below Locust street. Doyle & Co. (C), 1519 Sansom street. Cost, \$2,000. Temporary grandstands, Commercial Museums, Thirty-fourth and Vintage

Rt. Rev. Archbishop (O), Eighteenth and Race streets. Wm. J. McShane (C), 417 S. Thirtieth street. Cost, \$13,356. School, 2-story rear addition, 60x25 feet, stone, slag roof; 2-story side addition, 10x31 feet, stone, slag roof, Thirtieth and Dickinson sts.

Clark Estate (O), 2427 North Front street. C. Bonner (C), 2636 North Front street. Cost, \$2,100. Building, brick, 2 stories, 32x58 feet, 2423 and 25 North Front street.

N. Haines Estate (O), Fifty-fourth and Haverford streets. Christian E. White Co. (C), 511 North Sixty-third street. Cost, \$500. Brick, 1 story rear addition, 16x46 feet, Fifty-fourth and Haverford avenue.

J. Clarfeld (O), 809-11 South street. Jacob Bender (C), 1817 South Fourth street. Cost, \$1,500. Store, brick, general interior alterations, 809-11 South street.

Newton Aspden (O), 496 Lyceum avenue. M. Sworthy (C), 6835 Ridge avenue. Cost, \$1,000. Garage, stone, 1 story, 25x22 feet, slate roof, Gates street and Ridge avenue.

M. Tolster (O), 1927 North Twenty-third street. M. H. Brown (C), 2718 North Twenty-eighth street. Cost, \$1,100. Saloon, brick, general repairs, 2335 Ridge avenue.

themselves a few years along the road of life with families to support and other mouths than their own to feed.

Fifteen years ago the arbitration board of one of the big trades was engaged in their interminable pow-wow about wages; the men wanted more and the employers were stalling them with talk. Every time the union got a five cent raise (per hour) it discovered that the cost of living was more than keeping pace. (Why it should have so singled out the unionists when some millions of other workmen all over this broad land were NOT getting forty cents a day piled on top of four dollars that they were NOT getting, is an interesting question but not to be discussed here.) It took two years for the union to palaver this five cent raise out of the bosses—but I am getting ahead of my story.

One of the workmen-members of the board made a speech in favor of the raise. He expatiated on the tribulations and trials of his constituents, the hardship of their lives, the precariousness of their living. "We thought when we got forty-five cents an hour" (\$3.60 per day) "that we were going to be able to buy porterhouse steaks, but we found we couldn't. When we got fifty cents" (\$4.00 per day) "we didn't find the many nearer."

So they didn't; and now nearing the dollar mark they are further away than ever. That is my statement, not the workman's. The fact is that the workingmen were violating an economic law and have been ever since they started having their own way about wages. They have been traveling in the wrong direction—away from porterhouse steaks instead of toward them.

Their situation is an example of the fact that you can lead a horse to water but you cannot make him drink. They can fix the wages and their bosses can chime in, but they do not make jobs thereby. Do you think they ever will?

Of course the uncertainty of porterhouse steaks is really a logical result of certain causes. The everlasting upward advance of wages has been met by an ever increasing uncertainty of work. It is the way Nature's law acts. When I said back there that they were violating the law of supply and demand I meant that they were trying to.

There's a struggle going on now, a struggle upon which the light of publicity is shining brightly, but the struggle is blind, as yet, and the onlookers do not understand, as yet, even though they see every move.

I said at the beginning of this that I doubted whether the subject of trade unions has ever been given any thought by practical people. I say it again. That unionist who had figured out the mournful conclusion about porterhouse steaks had thought and thought and thought till his brains were numb and he hadn't got an inkling of what was the matter. If he were reading this he wouldn't understand, and of course he wouldn't believe me

UNIONS AND PORTER HOUSE STEAKS

There is considerable doubt in my mind whether the subject of trade unions has ever been given any thought by practical people. Books have been written about them, histories, compilations of statistics, statements of their number, membership, rates and so forth.

They are supposed to be, from one point of view, idealistic and altruistic combinations having for their object the greatest good to—the members, and a corresponding or attendant benefit to society through raising the standard of living of all who come in contact with them through the increased scattering of money wherever they are; more to spend and more to be gathered from the spenders.

From another point of view, they are looked upon as an institution of the evil one, practicing all sorts of illegal outrages on non-members, or in other words those who do not belong but may wish to pursue the work which this or that particular union claims as its monopoly.

I do not intend to try to prove anything about them, whether they are good or bad, wise or foolish. One or two interesting facts are to be noted; that's all. For instance, they are seemingly immune from all control of the law of supply and demand. All other commodities, including all un-unionized labor, go up and down with the times, dear when scarce, cheap when plentiful; but union labor goes upward forever.

I do not believe there has been a single hitch or stoppage in the advance of rates of wages since the beginning of unionism. Gasoline goes up and down—principally up nowadays, alas! Automobiles go down, and so forth, all in answer to the law of supply and demand. But labor always soars.

Another interesting fact is that the members of trade unions who depend on their trade for a living are not a prosperous lot. A few favored ones there are and always will be, but as a class their happy days are past when their apprenticeship ends and they find

if I told him that the unions were going the wrong way.

But enough of this! Maybe someone thinks I mean that porterhouse steaks are not intended for any workman. I don't mean that either.

But I must be about my business.

There's a great non-union belt in this country, the great area which lies between Buffalo and Chicago. The centre of it is Detroit, and around that centre lie a hundred grand American towns as far up as Lake Superior and as far down as the Ohio River. A great industry has grown up in that belt

where there were no unions to interfere to uplift the downtrodden workingmen and take the cruel boss' heel off their necks. There, in that favored land, a man named Ford built up an industry without a bit of unionism anywhere in it, and if I am not misinformed there's a large consumption of porterhouse steaks in the vicinity and wages are not only high, but there is plenty of work. And God grant that there always shall be.

But what do you think Henry Ford could have done if he had a panoply of unions to tell him how to run his business?—Theodore Starrett, in "Architecture and Building."

Trade News and Gossip

Cullings from the Week's News with a Special Interest for Men Engaged in the Structural Industries—What is Happening in Trade and Architectural Circles.

**Charles T. Sleight, 136 Washington street, Paterson, N. J., architect, desires literature pertaining to coal conveying machinery.

**M. E. Smith, formerly connected with the Multi-Lux Illuminating Co., of Cleveland, O., and later with the Beardslee Chandelier Co., of Chicago, Ill., has become engineer and manager of the commercial lighting department of L. Plaut & Co., 432 East 23d street, New York.

**E. B. Croft and F. C. Boerner, architects and engineers, have formed a partnership under the firm name of Croft & Boerner, and have opened offices in the Place Building, Minneapolis, Minn. The new firm desires catalogues and samples of building material and supplies. Mr. Croft and Mr. Boerner were formerly connected with the Turner Construction Co., 11 Broadway, Manhattan.

**At the annual meeting of the Cement Products Exhibition Co., held May 23, the following officers were elected: President, B. F. Affleck; vice-president, A. Y. Gowen; secretary, Blaine S. Smith; treasurer, J. U. C. McDaniel.

**The Hay bill pending in Congress seeks to standardize the barrel of lime. Washington advices state that the bill establishes a large and small barrel of lime, the large barrel of 280 pounds, and the small barrel 180 pounds net weight. It also provides that the net contents shall be stenciled on one or both heads of the barrel. A further provision is made that when a jobber or local dealer sells lime in quantities of more than one barrel and delivers it in barrels which are not headed and are used merely as containers, then nothing in the act shall be deemed to require that the barrels be marked as provided in this section or that each individual barrel contain either of the standard weights established, but he shall nevertheless deliver a total weight equivalent

to the total weight of the large or small barrels represented sold or charged for by him or purported to be delivered by him pursuant to an order.

**The Sun Shipbuilding Co., of Philadelphia, Pa., has awarded a contract to the Raymond Concrete Pile Co., of New York and Chicago, for the concrete piling and reinforced concrete foundations for their machine shops, crane runways, and five launching ways to be built at their new shipbuilding plant at Chester, Pa.

**The asbestos of the world is supplied chiefly by Canada. Most of it is exported free of duty to the United States, the greatest manufacturer and user of asbestos products. The average price per ton at point of shipping of crude No. 1 asbestos during the year 1915, according to government statistics, was \$274.11; crude No. 2, \$122.39; mill stock No. 1, \$52.40; mill stock, No. 2, \$19.99.

**An order in council by the Government at Ottawa, Canada, March 25, 1916, placed an embargo on the shipment of asbestos from Canada to other than British ports, but permitted shipments to the allied countries, France, Russia, Italy, Japan and Portugal, all special licenses being granted by the British consul. As this absolutely shut out the consumers of asbestos in the United States, it was demonstrated to the government at Ottawa that this would work a great hardship on American manufacturers and consumers and the embargo has consequently been modified to the extent of permitting shipments of crude asbestos to enter the United States on the guaranty from the manufacturers and in turn from their customers that none of the crude or manufactured material will be re-exported from the United States except as provided for in the original circular.

OUR DUAL WATER SYSTEM.

An undeveloped city asset exists in the mileage of the extended system of high pressure fire mains, which, beginning with next month and for nearly a half year thereafter, could be made to contribute a daily, rather than an occasional, service in supplying water for flushing, cooling and cleansing the streets. In time Philadelphia may come to make such utilization of these mains, and direct pumpage from the Delaware might even be utilized, without serious interference with their primary purpose of fighting fire, in supplying water to the big industrial consumers that now constitute such a heavy drain upon the filtration system. For with the possession of the nucleus of a dual service, it seems expensive and wasteful to continue "manufacturing" pure water to be delivered to power houses.

The water supply system of Paris affords, in its various divisions and kinds of water supplied, an example of what can be done on a smaller scale in Philadelphia. The French capital, long noted for the spick and span appearance of its highways, does not use its drinking water to flush the streets or to be turned into steam. The Parisian knows of "source water" and river water, and it is the former that constitutes the basis of the "domestic" supply or the water that enters into the preparation of foodstuffs and is used as drinking water.

To obtain pure drinking or "source water," Paris was compelled to go to the Dhuis, the Vanne and the Avre, the nearest sixty miles from the city and the farthest one hundred and ten miles from the city. The river water comes from the Seine, the Marne and the Oureq. The bulk of the service is metered, and the meter rates are proportioned according to the rental value of the apartments or dwellings. But strict regulations prevail as to the proper use of the different classes of water and the "source water," which ordinarily costs from two to three times as much on the meter rates as the river water, is reserved solely for domestic and a few special uses.

Just how much filtered water is used locally for cleaning streets is not known, but the specifications of the Bureau of Highways call for the daily flushing of all main streets between South and Poplar streets, so that in the course of every twenty-four hours there must be a considerable quantity of water consumed in this way. The high pressure mains, too, are not idle when there is no occasion for their service in extinguishing fires. For seventy pounds pressure, equal in amount to that on all other street mains, is required to be maintained in these pipes at all times, so that their use for flushing, and, even their connection with the industrial establishments, would not entail any heavy added cost.—Philadelphia "Bulletin."

Editorial Comment

The "Builders' Guide," thanks to the interest and courtesy of Christine Wetherill Stevenson, First Vice-President of the Philadelphia Art Alliance, is enabled to present in this number what may be regarded as an official explanation of the selection by that organization of a Boston architect in the matter of the designing of the building to be erected by it on Rittenhouse Square.

Some comment was occasioned by the selection of a Boston man to plan this work because of a feeling, pretty general among local architects, that as a Philadelphia institution the Alliance should have encouraged local talent.

This feeling was intensified by a belief that little or no difficulty would have been experienced in finding a Philadelphian able to meet every demand in connection with the planning of such a structure as that in view.

In the discussion growing out of this comment the fact has been disclosed that the Boston man was selected by the Alliance not of its own initiative, but on the recommendation of a committee, consisting of two of the most distinguished of Philadelphia architects and an equally distinguished Pennsylvania mural painter.

In other words, it develops that that the selection was made because, the style agreed upon being Gothic, a Boston architect, Mr. Cram, of Cram, Goodhue & Ferguson, was by the unanimous view of the committee the foremost living exponent of that particular style.

Mrs. Stevenson's letter follows:

* * *

"June 19th, 1916.

The Editor 'Builders' Guide,

Perry Building, Philadelphia, Pa.

Dear Sir:

A recent article in your columns asks a question regarding the selection of a Boston firm of architects for the proposed Art Alliance building, which certainly requires an answer, and an explanation.

You say: 'Why in a city as deservedly famous as Philadelphia for the skill and originality of its architectural designers, we call in a firm of Boston architects?'

The answer follows:

Just a year ago last March, impatience with the limited accommodations that our city affords for concerts and dramatic performances, led to the present plan with the dea foremost in the minds of those interested, that the architecture of the auditoriums should be Gothic. Some had heard Gothic auditoriums recommended at lectures at the Beaux Art as most conducive to the highest form of esthetic enjoyment. Others, including Miss Violet Oakley, concurred with the same idea expressed in Chandler's book on the modern theatre. Later, Mrs. Otis Skinner added the suggestion that something suggestive of Old England should be done, and the theatre ded-

icated to performances of Shakespeare's plays the week of his birthday every spring.

It was at Miss Oakley's studio that the Gothic type of building was decided upon. A number of architects were afterwards consulted as to the man most experienced in designing Gothic auditoriums. The invariable reply was, 'Cram is your man.' There was still some hesitancy about appointing Cram, rather than a Philadelphia architect, and the problem with all its requirements was placed before one of our leading architects (one, by the way, who has done some very lovely Gothic work himself). 'Cram is the specialist in this sort of thing,' he said. 'It would not be fair to give it to anyone else. You should have him appointed by a committee of Philadelphia architects and the president of the Philadelphia Chapter of the American Institute should be chairman. I'll call him up.' To make a long story short, M. B. Medary, then president of the Philadelphia Chapter, accepted the chairmanship and appointed Mr. Frank Miles Day and Miss Violet Oakley to serve with him, and this committee unanimously appointed Cram; so that 'a firm of Boston architects' was appointed for our 'Philadelphia Art Center' through the generous recognition of our Philadelphia architects and artists of the attainments of a fellow worker in his special line of work, without thought of local prejudice or personal interest.

Surely this is a greater tribute to our Philadelphia architects than had they appointed one among their number, and the building will be a monument to their generous appreciation of a high standard of attainment (and their willingness to recognize it) in 'a firm of Boston architects.'

The above statement has been submitted to Mr. Medary, and approved by him.

Yours very truly,

CHRISTINE WETHERILL STEVENSON,

First Vice President of Philadelphia Art Alliance."

* * *

The "Guide" concurs most heartily in Mrs. Stevenson's statement that the selection of Mr. Cram, made as it was, "is a greater tribute to our Philadelphia architects than had they appointed one among their number," representing as it does, "a generous appreciation of a high standard of attainment and their willingness to recognize it" without "thought of local prejudice or personal interest."

The "Guide" begs to thank Mrs. Stevenson for the courtesy of her very full, frank and clear explanation, one that we feel sure will remove any vestige of doubt that may remain as to the propriety of Mr. Cram's selection.

* * *

The ugliness, architecturally speaking, of

Buy pure lime, 99% pure, no core, no grit. DAVID FRANCE CO.,
Tasker Street Wharf, Delaware River, Phila. Both 'phones.

Philadelphia's City Hall is an old story.

It remained for the Ad Men's Convention to so light up the tower of the grimy old structure as to reveal unsuspected graces.

Says the Philadelphia "Public Ledger":

"To some it is a waste of funds that bathes the great obelisk at City Hall in living light, from the rooftop, whence it upsoars to the verdigris brim of the Founder's hat and the shadowy figure at whose feet the bluish-white electric tiara is resplendent. But thousands of others, whose eyes are inevitably upraised to the illumined shaft as they approach it along the four arterial thoroughfares of the city, find the sight an inspiration in its singular beauty and a revelation of aspects unseen before. It seems a wise investment and not a mere esthetic extravagance.

Too many see only in our City Hall what Baedeker rightly calls 'a tasteless pile.' It is all of that. Its squatty, batrachian obesity, planted between our two great railway termini and insuling the eye of every visitor, gives a most unfavorable impression of the artistic sensibilities and the state of culture among Philadelphians. Costly as it was to cover four and one-half acres with granite and marble after the architectural fashion known as 'modified French Renaissance,' and operose as the task will be of setting down the great stones and carting them away, Philadelphia cannot endure many years more the sight of that glaring uglification standing at the city's heart, pretending to be our chief pride and ornament. The City Hall must go. But that is another story, and while we must suffer what we have, we must perforce pay tribute to the tower, much happier in its architectural concept, much newer and more graceful in its outlines, and going far to redeem the heavy, muddy dulness round the base of it.

That tower as it now stands, bathed in a soft and purifying light against the nocturnal skies, is a symbol of many things that are hid from our eyes as we putter about, looking earthward, in our tveryday lives. Muckrakers, preoccupied with ourselves and our fussy, petty concerns—or matters of moment—we have no time to bother with any loveliness that may be hovering aloft, even though upon the rustling wings of an angelic visitation. Nothing of the spiritual, the ethereal, shall call a halt upon our rushing progress. But ever and anon, like this bright phenomenon now seen in midair over Broad street, some heavenly vision is flung like a rainbow athwart the landscape of brick and stone, compelling us to pause and admire and then to proceed upon our way subtly and slightly changed."

* * *

If all this may be brought about by a few deftly placed search-lights, there may be wisdom in the planning of a system of exterior lighting for buildings much of the beauty of which is lost because out of range. Are we to have an era of indirect lighting

planned to focus the eye of the pedestrian upon those architectural graces that in very tall edifices are but all too often lost in the air?

The query opens up a new theme of discussion.

* * *

Dr. John P. Garber, in his first annual report as Superintendent of the Schools of Philadelphia, makes interesting references to the improvement which has taken place in the character of the buildings erected for school purposes since 1906.

"School buildings erected at the present time are fireproof, and of the very latest design. They are models from the sanitary standpoint, and every advantage which modern school construction requires is contained in the new buildings. In 1906 seven new buildings and additions were put under contract, of which three were of fireproof construction. During 1915 there were 232 class rooms contracted for, or accommodations provided for 11,600 children, a greater annual increase in school accommodations than ever before contracted for by the Board of Education. The amount contracted for totaled \$1,968,277, for the erection of new buildings and additions, and \$253,062 was paid out for repairs to buildings occupied for school purposes. One fact stands out prominently—every building erected last year was of fireproof construction..

* * *

"The number of new buildings erected during the past decade is very large. Many other buildings have had their capacity increased by the erection of wings. Ten years ago a schoolhouse with 21 class rooms was thought to be very large. Few indeed were the buildings that exceeded this size. The Board has wisely adopted the policy of erecting larger structures except where the population is too sparse to make this feasible. This conduces both to economy and efficiency. Not only is a large plant relatively cheaper to build and to operate, but it offers better conditions for carrying on the multifarious activities of a modern school, and the opportunity to classify pupils so closely that the work of a given group shall be such as appeals and is adapted to every member of the group, is greatly increased."

* * *

"The fluctuating prices of building materials have played havoc with the building trade, and the large percentage of revisions is due principally to this cause," according to the "Ledger." "In many instances the prices submitted for materials are for immediate acceptance, and as such a course of procedure is almost impossible, difficulties arise in submitting estimates. Things which not only have a bad effect on the owners, but also make double work for both the architects and contractors, should be eliminated as far as possible, and it looks as if the only possible way to keep the building cost within appro-

priations is to get approximate estimates on well-worked-up preliminary drawings. While this might at first seem an unnecessary expenditure of time, it will pay in the end, and perhaps prevent the losing of jobs entirely by frightening off clients. The architects' old method of arriving at an approximate price by comparison with other finished work, or by cubing it, can no longer be depended upon because of the advance in both labor and building materials, which has caused the finished building to increase at least 20 per cent. in the last year."

* * *

The New York "Real Estate Record" thinks that the condition here described is one that may be counted on to regulate itself.

"When speculative builders of the first order publicly announce that they cannot proceed with operations because of the high cost of materials made of iron and steel and other metals (which constitute two-thirds of the cost of modern fireproof construction when the expense of installation is added) the evidence of an economic impasse in that direction cannot be ignored," says the "Record."

"But if the high cost is natural, there is no more sense in complaining about it than in complaining about the weather. If artificial, it is certain to react, and the public will in the end be the gainers."

* * *

A common sense way of looking at a question that is giving builders more or less concern.

* * *

So seldom, even in the case of noteworthy buildings, does the press or the general public think it necessary to mention the name of the architect in connection with his work, that it is reassuring to note two recent cases in which due appreciation was shown the designers.

At the recent dedication of the Alumni Gymnasium of the Alabama Polytechnic Institute, Frank Lockwood, of Montgomery, Ala., architect of the building, was presented with a handsome gold watch fob by the authorities of the college and was given due prominence in the newspapers.

* * *

The second incident occurred at the opening exercises of the Rochester, N. Y., Y. M. C. A., when the three architects, John F. Judson, of New York, and Foster Warner and Claude Bragdon, of Rochester, and Charles W. Hoffman, superintendent, were among the guests at a dinner to celebrate the event.

The popular attitude toward the architect

M. Sussman (O), 318 Market street. S. Bannett & Son (C), Drexel Building. Cost, \$1,000. Brick store, 2 stories, rear addition, 16x30 feet, 808 Callowhill street.

B. G. Keplinger (O), 29 South Fifty-second street. Sheen & Gill (C), 450 North Wilton street. Cost, \$2,400. Brick store, one-story addition, 21x64 feet, slag roof, 5210 Market street.

Joseph P. Pettit (O), 5629 Girard avenue. Mitchell Bros. (C), 2125 Roce street. Cost, \$8,00. Brick garage, 1 story, 75x100 feet, slag roof, 6234-36-38 Market street.

Wolfgang Richter (O), Ditman and Knyer street. Anton Ahlers (C), 3425 Howell st. Cost, \$5,500. Brick factory, general alterations and additions, Erdrick street and Vankirk street.

P. R. R. Co. (O and C), Broad Street Station. Cost, \$4,000. Frame buildings, all temporary, three 1 story, 20x50 feet; one 1 story, 20x70 feet; one 1 story, 20x20 feet; one 1 story, 20x20 feet, Pier No. 3, Girard Point, Philadelphia.

P. R. R. Co. (O and C), Broad Street Station. Cost, \$4,000. Frame buildings. Four 1 story, 20x52 feet; one 1 story, 20x21 feet one ext. addition, 1 story, 20x30 feet; one ext. addition, 1 story, 20x20 feet, Forty-eighth and Parkside avenue.

Luzi Amarando (O), 623 Washington avenue. Dominic Ireo (C), 515 Christian street. Cost, \$1,200. Brick dwelling, three-story front addition, 16x13 feet, 623 Washington avenue.

WHY FURNACE PRICES ARE HIGHER.

By way of explaining why prices on warm-air furnaces have advanced and incating that they may go even higher, the following figures are given. These represent the approximate percentage advance in the price of raw materials which enter into the construction of a heating job over the low figures prevailing some months ago:

Pig iron, 60 per cent.; coke, 45 per cent.; wrought pipe and fittings, 40 per cent.; galvanized iron, 100 per cent.; copper, 120 per cent.; tin, 25 per cent.; screws, 50 per cent.; spelter (zinc), 300 per cent.; lead, 50 per cent.; aluminum (used in pattern work), 175 per cent.

Some manufacturers explain the fact that only nominal advances have been made because they have had liberal stocks of raw material on hand which had been purchased at the lower prices. An intimation is given that as soon as it is necessary to consume new and high priced materials there is a likelihood of further advances on furnaces.

The way to get money is to sell things to people who want things. People who want building material and building devices read "The Guide."

A HARD ROW TO HOE

Someone was talking about Goethals and the marvels he was working at Panama. It was a builder, meaning by that one of the innumerable band of sub-contractors that do their little part in building,—supplying sand or furnishing the cornice work or putting on the lightning rods. Being a builder he knew something about the secret sorrow, the skeleton in the closet as it were, of all builders; he knew about the jug-handle contracts and the unions.

"What if Goethals had to deal with a thoroughly organized bunch like we have here in New York City," said the builder.

The man who was listening was a builder, too, and he grasped the meaning of the question before it was finished. What if Goethals had had to deal with the New York or Chicago or San Francisco trade unions in build-

ing the Panama Canal?

Well, if the canal had been finished by now Goethals would have been a dead man three years ago. The strain would have broken him down; that ailment called nervous prostration, a tragic distemper which the generality of people regard as more or less imaginary, would surely have claimed him and some successor had shared the honors, per haps gotten them all.

Any one who has been behind the scenes in a building operation—one of these high speed little affairs that I was talking about last month—knows of a nerve wracking strain that is put on the chief persuader, as I will call him, the head man who jollies, coaxes, cajoles or threatens the dozens of sub-contractors who have to work together at each stage of a building operation.

We have pebbles all sizes. Cost less than what you are using. DAVID FRANCE CO., Tasker Street Wharf, Delaware River, Philadelphia.

Maybe it's a sub who has finished up a certain part of his work only to find some vandals in the shape of irresponsible unionists in some other line of work on the job have gone upon it and either ruined it or so injured it as to make an expensive restoration necessary. Or it may be that one sub has done his work in such disregard of drawings as to make another man's work come wrong.

This problem of misfits or mistakes on a high speed job is one that requires the very utmost of either diplomacy or brute bullying power, sometimes both, in the head man, the captain of this little industry of building a little skyscraper.

You know our business is building skyscrapers. That's what the newspapers call it, that's what the public calls it. Americans are skyscraper builders, that's what distinguishes them from all other nationalities. There's a romance about it all that is dear to the American heart. The skyscraper of all our institutions is the one the common or garden variety of American citizen is proudest of.

And all building in America is skyscraper building in the sense here used, whether it is a two-story bank building or one of the real sky-touchers.

So we'll get back to the little captain who is busy showing some patron whether it's an owner—rapacious, of course—of an architect—pernickety, of course—that he, the captain, can build a skyscraper in ninety days from moving out to moving in, all for the small sum of a quarter of a million dollars and not a cent more.

This little captain has his schedules and programs, his budgets and his allowances for this and that in money and time. All the subs have their parts laid out for them and the time set for their coming (on the job) and going. All are tied up with jug-handle contracts with penalties if they don't get done on time and somebody has the written right to throw them out on the street and do their work at their expense out of "retained moneys" if for any reason they don't perform.

Then comes the time for this one or that one to start on the job, and the job is not ready; the other fellow is slow and hasn't even got started. Then others "fall down." Very rarely the first man gets done before the second one is ready. Sometimes number two will make a job wait for a month in some one of its essential parts to the complete disarrangement of the captain's plans.

Then mistakes commence to show up; this or that thing has to be altered to make things come right. The sub has to be hauled on the carpet and coaxed or threatened to make him work his men overtime—at union rates—to undo the mistakes or to make up for lost time. Three or more concerns may be involved in

some error and a lawsuit might seem to be the only way to straighten it out. The diplomatic quality of the captain is now brought into play, and if he is a real captain the thing is all smoothed over and all the things are smoothed over and when moving-in time comes, or before, the key is in the front door and the captain is using up his nervous energy on some other job.

And the little subs—do they all make up fat little bills for all the overtime and wasted time—squandered in doing things twice and three times? And do they put in a few drummers' overcoats to pay them for their own time and their overhead expense? Well, sometimes they do. Not so much as they used to.

Too often they have to "sue for their money," or, rather, they used to. Nowadays it isn't worth while; too many of them are prostrated by doing work at too low prices and by the more and more exacting demands of their mechanics. Too many of the unhappy subs just take what they can get and go out and look for more jobs on which to repeat their past experiences.

And the captain, what of him? Oh, well, he is buried down below the surface of some organization, wearing himself out in the constant bickerings and argufying that goes on and on forever.

You will understand that I am speaking of the man-behind-the-gun kind of a captain, not of the figurehead captain, and I am speaking, too, of the typical one, not the exceptional one. The greatest contractor-buster in all the Russias is now a man of fifty. An iron man, to all appearance he has stood the shock of the attack of a thousand ruined sub-contractors who have dashed themselves to pieces against his rock-bound heart with vain pleas for extras to pay them for work done which had not been specified, which he had coaxed or bullied them into doing to his everlasting glorification in the eyes of merchant princes whose work he did, so that the merchant princes continued him in favor year after year and recommended him one to another so that he did millions of rubles' worth of work and never a contractor made a kopeck out of it.

The merchant princes call this man a Captain of Industry—of the building industry. I guess he is one. Still young, still strong, yet, as I claim, an exception to prove the rule.

The wear and tear on the man who is at the center—the heart—of this chaotic industry is very great. If he is a man like the late George Fuller, a real captain by the way, the interests entrusted to him make him their bulwark or defense against a thousand attacks from these same subs of whom I have just spoken with sympathy.

But that is the other side of the shield. George A. Fuller's career, successful and brilliant, proves my contention that the captains of the building industry have a hard row to hoe. Fuller died before him time.—Theodore Starrett, in "Architecture and Building."

TRADE NEWS AND NOTES.

**It was in 1870 that the first passenger elevator was installed in New York City, in the old Equitable Building, at Broadway and Cedar street. To-day there is now finished on the same site a building that contains a total of fifty (50) elevators, which is more than in any other building in the world.

**The per capita fire loss in New York City last year was \$1.06, which was the lowest in the history of the city, but large compared with the per capita loss in leading foreign cities: 42 cents in Austria, 63 cents in France, 67 cents in the United Kingdom, 17 cents in Germany, and 7 cents in the Netherlands. The Supervising Statistician, who makes the report, rightly suggests waiting to see if the low record for New York can be maintained through a series of years.

**The National Radiator Company, Johnstown, Pa., has appointed H. Tyler Kay advertising manager. Mr. Kay was formerly advertising manager for the Consolidated Engineering Company, Chicago.

**Bishop-Babcock-Becker, Cleveland, Ohio, has appointed Edward Dunston as a sales representative, with headquarters at the company's branch office in Pittsburgh.

**The National Committee of the Confederate Supply Associations announces that J. J. Cosgrove, of Philadelphia, has taken charge of the committee's public comfort station work as engineer-director, with headquarters at 261 Broadway, New York.

**Edwin A. Scott, formerly secretary of the American Society of Heating and Ventilating Engineers, has purchased "Sheet Metal," published monthly in New York. The June issue is the first to appear under Mr. Scott's direction. The publication is devoted to the furnace and sheet metal industries. Mr. Scott will have the good wishes of his many friends in the trade in his new work.

**The Pennsylvania Industrial Board, which must approve all safety devices before they may be used in the State, has formulated the following rule: "All applications for the approval of the board must be accompanied by the article itself or a working model for which application for approval is made. In all cases where the article has been approved by the Underwriters' Laboratories, the copy of such approval shall accompany said application."

**Robert H. Kelley has recently been appointed assistant sales manager of the Sand Mixing Machine Company, 52 Vanderbilt avenue, New York.

**Wilbur S. Wilding has been appointed Eastern representative of the International Filter Company, of Chicago, Ill., builder of filtration plants. Mr. Wilding will maintain offices in the Woolworth Building, New York City.

ANCHOR POST FENCES

are not the ordinary kind—they are fences of heavy galvanized netting erected on Anchor Posts—posts which won't sag or get out of line, and are galvanized both above and below ground to prevent rust.

In addition to fences and iron railings and gates of every kind we make tennis court, chicken-run and kennel-yard enclosures.

Exhibition Department

Of the

Master Builders' Exchange

18 South 7th Street, Philadelphia

Is open to the public every day except Legal Holidays and Sundays.

If you are manufacturing or handling anything pertaining to the construction or completion of a building, and you do not have it in the EXHIBITION DEPARTMENT of the BUILDERS' EXCHANGE, you should get it there AT ONCE, for that is where the people come to look for such things.

Building Materials and Appliances are there to be seen, and special care is given to explaining the merits and uses, and giving all information required.

Liquid Filler

The first Liquid Filler made and the best, answering every requirement of Nice Standard.

TRADE MARK **NICE** REG. U.S.A.

Wood Fillers are the trade's standbys. You can shoot at them from any standpoint without making any impression.

They are economical in time, labor, material; and produce wonderful results. In addition they are indispensable to every painter and finisher because of their adaptability to other uses.

A postal will bring you samples and catalogue free.

BUILDING LUMBER

Barrett Specification Roofs

Guaranteed
for
20
Years

"The roofing shall be laid according to The Barrett Specification dated May 1st, 1916, and the roofing contractor shall, on completion of the job, deliver to us a twenty year Surety Bond Guaranty issued by The Barrett Company in accordance with Note 1 of such Specification."

This is the new way of prescribing roofing in your building specifications when you want a Barrett Specification Roof.

The twenty year Guaranty Bond is a new feature of Barrett Service.

It will be given on all roofs of fifty squares or more in all towns of 25,000 population and over throughout the United States and Canada, and in smaller places where our inspection service is available.

This Guaranty Bond exempts the owner from all expenses of maintenance and repairs for a period of twenty years and the bond is issued by the United States Fidelity & Guaranty Company, one of the largest surety companies in America.

The roofer, in order to secure this Guaranty Bond, must be satisfactory to us, and must notify us as soon as a contract is taken and give us the right to inspect the workmanship and materials to see that both are in strict accordance with the Barrett Specification dated May 1st, 1916.

A copy of The Barrett Specification, with roofing diagrams, sent free on request.

Naturally, if we are to give a twenty year Guaranty Bond, we must be assured that the proper amount and kinds of material are used so as to insure the roof giving the maximum service.

We know from experience of almost fifty years that a roof laid strictly according to The Barrett Specification with the workmanship properly safeguarded will last twenty years and more without repairs of any kind, and we are issuing this twenty year Surety Bond so that owners of these roofs will get the benefit of that experience.

The principal architects, engineers and roofing contractors throughout the country are familiar with the plan.

If there is any information you desire regarding the proposition, just drop us a line to our nearest office and we shall be very glad to give you further facts.

Editorial Comment

In spite of the scarcity in labor due to the fancy wage scale of the munition makers, the advance in the cost of material, estimated at, approximately, 20 per cent., the eight-hour agitation and the naturally depressing effect of a Presidential campaign year, building activity continues to establish new records.

Here in Philadelphia the official returns for June are altogether remarkable. Statistics compiled at the Bureau of Building Inspection show that the estimated cost of new construction work for the month ending June 30th was \$5,147,115. The report shows that 873 permits were issued during the month for 1,709 operations.

For the same month in 1915 the official figures show 923 permits for a total of 1,700 operations. The cost of new building work in June, 1915, was \$3,873,850. For the month just closed it was \$5,147,115.

During the past six months 4,452 permits were issued for 8,576 operations at a cost of \$25,053,620, as compared to 4,823 permits for 9,598 operations at a cost of \$19,066,390 for the corresponding period of last year. The figures show a decrease of 371 permits and 1,022 operations, although the cost of the operations in the first half of this year exceeds that of the first six months of 1915 by \$5,987,230.

The following tabulated statement shows the character and cost of the various operations for which permits were issued last month:

	Operations.	Estimated Cost.
Dwellings, 2 story.....	882	\$1,935,700
Dwellings, 3 story.....	59	371,700
Dwellings, frame	3	5,200
Stables	2	1,950
Manufactories	12	896,000
Workshops	4	16,000
Garages	88	104,150
Office buildings	5	178,250
Stores	4	137,000
Warehouses	5	343,465
Engine and boiler house....	2	7,500
School	1	180,000
Hall	1	21,800
Parish buildings	2	51,000
Miscellaneous buildings ...	43	28,225
Additions	151	521,680
Alterations and repairs....	269	205,045
Miscellaneous work	137	34,350
Heaters	18	12,625
Fire escapes	4	2,050
Signs	15	7,425
Rooming house	1	21,000
Convent	1	65,000
Totals	1709	\$5,147,115

In the words of the departing ad men:
"Some town, that Philadelphia!"

* * *

A troublesome factor in the building trades

is the persistent upward tendency of wages. The New York Building Trades Council reports the following agreements as between employers and journeymen:

Cement masons, \$5.30 a day after October 1, and \$5.60 after January 1. The painters' strike has been settled by an agreement on a uniform wage of \$5 a day in all the boroughs for painters, decorators, paperhangers and varnishers alike, without distinction. The wages of riggers and machinery movers have been advanced from \$4 to \$5 a day. Concrete workers (laborers) are to receive \$3 a day hereafter. Asbestos workers and electrical workers are negotiating with their employers for increases.

The trouble in the carpenter trades has developed internal strife in the councils of the unions. The latest phase is the issuance of a temporary injunction by Justice Mullan against President Hutchinson, of the national organization, restraining him from enforcing his order of suspension of the District Council and all local unions and against any attempt on his part to form new unions. Only about 3,000 out of 17,000 men are now idle.

* * *

How speculative builders feel about the disposition to jump costs in certain lines of material is shown by the reluctance with which investors approach large work in this particular field. A builder who contemplated the erection of a twelve-story apartment house in New York City, but who has decided to wait until prices get back to normal before going ahead with the project is quoted as saying:

"It is a cold fact that it costs twenty-five per cent. more to build now than it did a year ago. Do you know that last year I paid but \$35.37½ per ton for structural steel at tidewater and that this year the price asked is \$70 to \$75? Twenty per cent. of the cost of a modern building goes into the steel frame. Take a building requiring 4,000 tons at \$80 per ton, and you have a charge of \$320,000 for the structural steel alone. Then there is the iron and steel going into the piping for heating, plumbing and lighting, and into stairs, elevator enclosures, reinforced concrete floors, and metal-covered trim, not to mention innumerable other things made of metal.

"I want to send one thought home, that it is my opinion there is no justification for the current prices of most of these materials, especially steel, because it is the result of pooling among the producers.

"It would have been a wonderful year for building but for that. Renting was never better. We shall wait until prices return to a moderate basis. In the case of a million-dollar building going ahead now would mean an extra cost of \$250,000. This would be lost when prices returned to a normal level. Be-

sides, nobody will buy property improved at such an extra cost."

* * *

A local builder tells an amusing yarn touching the scarcity of labor in connection with a school job he is building up State close to a big munition making concern. "As fast as I get men up there I lose them," said this builder. "They work on my job a couple of days, are approached by representatives of the steel people and offered more money, and away they go. A circus pulled into the town ten days ago with 70 men. When it got ready to pull out it couldn't scare up enough men to pack the tents."

* * *

What wonderful strides modern building has made within recent years was somewhat strikingly exemplified by a recent transaction in New York City. Twenty years ago if one were to suggest the mere possibility of such a thing as ordering the greatest hotel in the world complete, fitted, equipped and ready for business, much as one would order a suit of clothes, one would have been regarded as an Alladin-like dreamer indulging in mad and impossible visions.

And yet this is just about what happened in New York City recently, when Charles H. Ingersoll, the dollar watch man, signed a contract with Hoggson Brothers for the delivery of a \$15,000,000 hotel.

The hotel is planned to be erected in the Times Square district of New York; the \$15,000,000 is to cover the cost of the site, the building and its equipment. The building is designed to occupy an entire block front and is to be 28 stories high. It is planned to contain 2,500 rooms or more—nearly twice as many as the largest hotel now existing.

Starrett & Van Vleck and Beverly S. King & Shiras Campbell, two New York firms with many notable buildings to their credit, are the architects.

The Commonwealth Hotel Construction Corporation is a co-operative concern, which plans to have about 150,000 shareholders, each of whom—except the directors—will own a single share. The directors, in accordance with the laws under which the company is incorporated, will own three shares each.

It was desired to know in advance that the hotel building would not cost more than the sum which the corporation or association desires to spend. Hence the single contract, which covers the services of architects, engineers, builders and decorators, in addition to building materials and the furnishings, which are to be installed upon the completion of the hotel. The contract, in brief, binds Hoggson Brothers for a stated sum to take a building site and within a stipulated sum to deliver a fully-equipped hotel, ready at the touch of a button to receive guests and give full service.

* * *

Auctioneers of realty are seldom flowery. They can't afford to be. Men who buy real

estate as a rule are too hard-headed to stand for statements that overshoot the facts. On the Pacific Coast this predisposition for the plain, unfrilled facts does not, it seems, obtain. The "Real Estate Record" tells of an auctioneer at Santa Monica, Los Angeles County, named Tom Fitch, who sells building sites. And here is how Tom does it:

"We will sell at public outcry, to the highest bidder, the Pacific Ocean, draped with a western sky or scarlet and gold. We will sell a bay filled with white winged ships. We will sell a Southern horizon rimmed with a choice collection of purple mountains, carved in castles and turrets and domes. We will sell a frostless, bracing, warm yet un languid air, braided in and with sunshine odored with the breath of flowers. The purchaser of this job lot of climate and scenery will be presented with a deed to a piece of land fifty by one hundred feet, known as lot A, block 251. The title to the land will be guaranteed by the present owner. The title to the ocean, the hills and clouds, the breath of life-giving ozone, and the song of the birds is guaranteed by a beneficent God who bestowed them in all their beauty and affluence upon block 251, and attached them thereto by Almighty warrant as an incorruptible hereditament to run with the land forever."

This flowing outburst centers about a lot, fifty by one hundred feet, that brings in the neighborhood of six hundred dollars.

Looks as if the auctioneer is wasting a cascade of language that would bring better returns in the field of political spell-binding. But then, in some parts of the South and West one can buy a whole lot of oratory for six hundred dollars with a building site thrown in.

* * *

C. H. Clark, who handles the advertising for the Robbins & Myers Company, of Springfield, Ohio, made a remark, in the course of an address delivered during the recent ad men's convention, that ought to be writ large and pasted up where the average man could see it and ponder over it and let its underlying wisdom sink in.

"To make advertising effective," said Mr. Clark, "the advertiser should know definitely what particular class he is reaching in a given publication and what particular style of appeal is most effective with that class."

There's more real meat in that observation than lies on the surface. We know building material men who spend thousands of dollars every year on advertising in magazines of general circulation, reaching people who have at best but casual and surface interest in the products covered.

The "Guide" reaches architects, structural engineers, builders, sub-contractors, building owners and investors interested in building. The style of appeal that goes with the "Guide's" clientele is the plain, straightforward, direct, sales-talk—the kind of argu-

ment a salesman has to put up to get an order.

Magazine advertising may bring inquiries if something is given for nothing such as an attractive booklet or a sample, but it won't bag an order in a million.

Why? Because the appeal is not there.

To sell building material your appeal must be to the man with an interest in building—to such men, in fact, as the "Guide" reaches every week,—men whose life-work is building and who are always on the lookout for material, devices, equipment, new ideas bearing on that line.

It is undeniably true that a certain percentage of these men also read the magazines, but why pay the swollen rates for magazine space to hit, here and there, and by chance, as it were, an element that may be reached directly and without waste of ammunition, in mediums confined to that particular class?

* * *

Advertising is a study. It's a study that pays big dividends to the man who makes intelligent use of it.

REAL GOLD UNMINED.

"I am here as the self-appointed representative of 900 trade and technical publications printed in the United States and circulated wherever the English language is spoken. How important they are in their relation to advertising may be understood when I tell you that they carry, in the aggregate, advertising to the amount of at least \$25,000,000 a year—one-eighth of all the advertising money that is spent for all forms of publicity in the country—and that these advertisers "stick" year after year because it pays them to stick.

I have bought, sold and written all kinds of advertising—pasted and printed, indoor and outdoor, consumer and dealer, technical and commercial—and I have reached the conclusion that there is more real gold as yet unmined in the trade press field than in any other field of advertising endeavor."—Extract from address by R. R. Shuman, before the annual convention of the Associated Advertising Clubs at Omaha.

The "Builders' Guide" is the OLDEST, and the ONLY Architectural Publication in Pennsylvania.

Riches can secure no better illuminant than Electric Light for the mansion, yet our rates are so low that every home—even the most modest—can afford it. Electric Light is the brightest, cleanest, most convenient and hygienic light, as well as the most economical.

If your house is not wired for Electricity, ask us for the details of our deferred payment housewiring plan.

ALTERATIONS AND ADDITIONS

(Continued from page 447.)

brick elevator shaft, 2 stories, 720 Marshall street.

Lena Sunday (O), 3024 Diamond street. Simon Bannett (C), Drexel Building. Cost, \$3,000. Dwelling, brick, 1-story rear addition, slag roof, first story, 16x24 feet, second story, 16x16 feet, and general alterations, 3024 Diamond street.

Fuefabeies Mfg. Co. (O), Orthodox and Belgrade streets. Boyle Irwin (C), Box 950, Narberth, Pa. Cost, \$600. 15,000-gallon tank on roof, Orthodox and Belgrade streets.

Michael Merrone (O), 755 South Eighth street. Frank Tussi (C), 1361 Christian st. Cost, \$500. Store, brick, 2- and 3-story rear addition, 12x12 feet, slag roof, 755 South Eighth street.

Burt Bros. (O and C), Ninth and McKean streets. Cost, \$500. Brick boiler house, second story addition, 22x40 feet, Ninth and McKean streets.

Wm. H. Bratton (O), Leiper and Foulkrod streets. G. W. Crosley (C), 2264 Bridge st. Cost, \$1,800. Garage, brick, 42x26 feet, slag roof, northeast corner Foulkrod and Leiper streets.

Tasker St. Baptist Church (O), Tasker st., above Twentieth street. Wm. J. Robinson (C), 1508 Lombard street. Cost, \$1,725. Brick, 1½-story addition, 9x32 feet, tin roof, Twentieth and Tasker streets.

J. M. Morvine (O), Sixteenth and Morris streets. Jos. Padolese (C), 1448 South Sixteenth street. Cost, \$1,325. Store, brick, and general alterations and repairs, Sixteenth and Morris streets.

Jos. Fielding (O), 4816 North Tenth street. Henry Hobert (C), 2620 E. Cumberland sts. Cost, \$4,000. Garage, brick, 49x39 feet, slag roof, Mervine and Souden streets.

N. Gehmiger (O), 1223 North Twenty-ninth street. H. T. Campbell (C), Twenty-ninth and Stiles streets. Cost, \$700. Hot water heating system, 1223 North Twenty-ninth street.

S. Foreman (O), 2747 Germanown avenue. H. T. Campbell (C), Twenty-ninth and Stiles. Cost, \$500. Hot water heating, 2747 Germanown avenue.

Thornton Fuller Auto Co. (O and C), 2041 Market street. Cost, \$6,000. Garage, brick,

new slag roofs and general repairs and etc., Twenty-fourth and Bainbridge streets.

Chas. E. Fricke (O), 2325 W. Tioga street. Harry H. Wehmeyer (C), 1004 W. Lehigh avenue. Cost, \$750. Residence, stone, general alterations and additions, 329 Pelham road.

FIFTY YEARS AGO.

"Was I a carpenter fifty years ago?" said old Joel Beckwith, in answer to the question. "Of course I was. I was twenty years old then, and had been working at the trade with my father since I left school at the age of twelve."

"So you want to hear something of the old-time carpenter, do you? I have been thinking a lot about those days lately, perhaps because I have quit the business, and have more time to think, but I have wondered what some of these \$5.00 a day carpenters would do if they had to do the work we had to do with the tools we were obliged to use. You know I was brought up in the country, and we were most likely behind the city fellows with tools, but I don't guess we were much."

"You built some substantial houses in those days, didn't you, Uncle Joel?"

"Oh, yes, quite a bit more substantial, especially out in the country. I remember the first house fram I worked on. It was for a new farm house and the farmer cut the timber from his wood-lot, and we hewed out the posts and sills with broadaxe and an adz."

"In those days, especially in the country, the carpenter that could not use an adz was not considered much of a workman. Now I expect one would have to look a long time to find a carpenter that would know what an adz was for, unless in a shipyard. I have seen an expert adzman that would go over one side of a 12x12 with an adz and make it look as though it had been gone over with a jack plane. Then, there was the raisings. Never went to a 'raising,' did you?"

"No, but I have heard about them, and as near as I can come to it, they must have been quite exciting times."

"They sure were. The idea of substantial houses came down from the log house. This was not so much before my time that log houses were found, even in the section of the country where I lived, but strength in building was considered necessary, especially in the country where the wind had full sweep, and where one hundred years ago they used to put in 12x12 posts and floor joists. Fifty years ago in many places they had not reduced the size more than half. I remember that 8x8's were considered pretty fair size for posts and sills, and then some of the old fellows would shake their heads and say that we were skimping things too much."

"I have often wondered what some of

those old chaps would say if they could come to life now and see some of the balloon frames that are being put up. Just think of it—a two-story and a half house with nothing in it bigger than a 2x4, except the floor joists!"

"But you were going to tell me about the raising."

"Oh, yes. A 'raising' in the country was something to look forward to, and something to remember as well. We used to frame the sides of the building on the ground; then the farmer would send word and all the neighbors would come and help put the frame in place."

"Showed a pretty fraternal feeling, the neighbors all coming in to help at the raising."

"Well, I should say it did. Neighbors don't help each other nowadays like that."

"How about the jug of rum and the boiled dinner? Didn't that help some with that fraternal feeling, Uncle Joel?"

"Well, perhaps, but taking into consideration the way houses are built now, we did a good deal of hard work for nothing; but then those old houses did stand, and some of them are standing now, and hold their own much better than the ones built at a later date."

"I am afraid you are prejudiced, Uncle Joel. Houses are put together to-day on a scientific plan, especially when they are planned by a first class architect."

"That may be," said Uncle Joel. "But I notice that some of those wind storms have never been told about scientific building."

"You speak of the tools you had to work with, Uncle Joel. What were they? Tell us about them."

"I have told you about the broad-axe and the adz, both of which have gone out of the carpenter's tool chest. But speaking of tool chests, reminds me that in those days there never was such a thing offered for sale in a hardware store as a tool chest. I think the old-time carpenter would be ashamed of himself if he did not put his tools in a chest that he had built himself, but then there weren't so many tools. In fact, some of the people that called themselves carpenters would only have a saw and a hatchet, and had no use for a tool chest. But the real carpenter had, besides his saw and hatchet, adz and broad-axe, his saws of various kinds for various work, brace and bits, planes, squares, etc."

We have pebbles all sizes. Cost less than what you are using. DAVID FRANCE CO., Tasker Street Wharf, Delaware River, Philadelphia.

"Then the carpenter used to make his own mitre-box, and it would not do for any apprentice to be found trying to use a mitre-box belonging to one of the journeymen. To-day, you can go into a hardware store and buy a steel mitre-box that can be set to cut any kind of mitre, but if we had anything to cut other than an angle of 45 degrees we had to make a mitre-box on purpose to cut it.

"Then there is the screwdriver we used to have; just a plain screwdriver. I can remember the first time I ever saw a screwdriver used in a bit stock; I thought it the greatest invention of the age. In fact, the development of the tools that the carpenter uses has been one of the most wonderful things of the age—the bit stock that will bore a hole in the corner of a room, and the ratchet stock. And, there is the matter of planes. I can remember the first steel plane I ever saw. We used to call them iron planes. Previous to that there was nothing used but the wooden plane, and after the cap was set and the blade put in the plane it was adjusted by a hammer, and it was a pretty nice job to get the plane ground square, the cap set just where it should be and the cutting edge to show just enough to do the work.

"I tell my boys they don't know what work is now. We used to lay a floor of rough boards and then get down with our planes and make the whole floor smooth. I don't believe a carpenter in those days that lived to be about thirty-five years old could ever show a straight spine. If he did, we would doubt his ability to hold his own with the carpenter crew.

"One of the tools that has partially gone out of use is the draw-shave. No carpenter's set was complete without it, and possibly it is not to-day, but there isn't that use for it that there used to be, because there are so many other tools to take its place.

"Another thing, lumber is so prepared now that the hard work the carpenter used to do is done by machinery. No better illustration of this is found than in the floor. To-day when a hardwood floor is laid it is perfect—there is nothing to do, unless it is to oil it or varnish it.

"It is the same with window frames. To-day the carpenter is not called upon to make a window frame—they are already made. All he has to do is to set them and fit his windows. In fact, specialists have entered into the carpenter business, the same as in any other business. The carpenter trade is decidedly different in every way than it was fifty years ago."

"You spoke of the \$5.00 a day carpenter of to-day, Uncle Joel. Don't you think he earns his money?"

"There are two ways to look at that, and we must be fair to the carpenter of to-day," said Uncle Joel. "Fifty years ago the carpenter worked ten or twelve hours a day and he worked hard. The carpenter of to-day works possibly nine hours a day, having nothing real laborious to do, in comparison with

the old-time carpenter, but he accomplishes more. So it is hardly fair to draw comparisons."—"National Builder."

THE HUMOROUS SIDE OF THE BUILDING GAME.

"You are not very happy in this house," friends remarked to the renter.

"No, I can't say we are."

"Your ceilings are falling."

"They are, and that isn't all. Our roof leaks, our cellar fills with water every time it rains, our radiators thump, our furnace is too small for the house, its appetite is too large for our income, our gutters have rusted away, the porch sags, the house hasn't had a coat of new paint for seven years, the wall paper hangs loose in every room, and the chimney is shorter after every windstorm."

"Why in the world don't you move?"

"Because we can't find another house with a hall that our long Oriental runner will fit."

* * *

"How are the plans for your new house coming along?"

"Splendidly. My wife has finally laid out all the cupboards she wants, and now all the architect's got to do is to build the house around them."

* * *

"I tell you," said the real estate agent, "there isn't a finer residence development on earth than this. Just look at the wonderful scenery."

"The scenery is all right," replied the man who was looking for a home. "The only trouble is there's too much of it between here and the city."

* * *

Pat, who had carried the hod in a small town, stood before one of Chicago's tallest office buildings, removed his hat and slowly counted the stories.

"What are you going to do—buy the building?" asked a passer-by.

"No," said Pat, "but I would like to have carried the hod on that building."

"Why?" queried the stranger.

"Well," quoth Pat, "I have it all figured out. On the first floor I would carry 25 hods a day, on the second 24, on the third 22, the fourth 20, the fifth 18, the sixth 16, and so on until I got to the twelfth floor, when I would carry but one, and before I could get to the thirteenth floor, the whistle would blow and then I would put in a whole day without doing anything."

* * *

Labor unions are strong in the West and especially strong in a city where, on Halloween, the boys pulled a lot of pickets off the fence belonging to a house in which a union barber lived and made a bonfire of them. The barber bought some new pickets and nailed them on his fence himself. Whereupon he was promptly fined fifty dollars by

the council for doing carpenter work which should have been done by a union carpenter. The barber thought this over for some time. Then he presented the Carpenters' Union with a bill for \$1,375.

"What's this for?" asked the chief of the Carpenters' Union.

"Why," the barber replied, "that's what's due the barbers because the carpenters shave themselves."

His fine was remitted.

* * *

The Plasterer—I thought you were working on old Leary's new house?

Painter—So I was, but we had a row, and he said he'd put the rest of the paint on himself.

Plasterer—And did he?

Painter—Yes, at least, that's where he put most of it.

* * *

William, who was erecting an edifice out of building blocks, showed such unusually bungling workmanship that his father, who was a carpenter, took him to task.

"What kind of a shack do you call that?" he asked the boy.

"Oh, that's all right, papa," replied William, "I'm building it to rent."

* * *

"Are you the man from Sodder & Co.'s to do the repairing of the water pipes?" asked Mr. Subbubs.

"Yes," replied the plumber, "and Mr. Sodder says it will cost you \$60."

"What! Why, he hasn't seen the job. He doesn't know how much I want done."

"Mebbe not, but he told me how much to do."

* * *

Mr. Wilkerson, the architect, had been invited down to the Clarks to display the plans of Clark's new house to some guests.

"Here is the front elevation," explained the architect, as he laid the plans on the library table for the inspection of the visitors, "with the outside window and the circular gallery; this is the east elevation, showing the tower."

After various comments had been made by the guests, little Arthur, aged 7, who was enormously interested in the new house, cried:

"And where are the two mortgages father said he was going to put on?"

BILLBOARDS.

A pamphlet entitled "The Billboard Nuisance in New York City" has been issued by the National Highway Association, Division of Municipal Art. It presents a number of interesting photographs taken about New York City showing the vulgarity of the billboard and its injury to architectural and landscape effects. The pamphlet is the beginning of a campaign to get legislation to restrict the location of signs. It is a most commendable effort and will unquestionably have the support of architects.

A RIDDLE WITH A MORAL—CAN YOU GUESS THE ANSWER?

I am more powerful than the combined armies of the world.

I have destroyed more men than all the wars of the nations.

I am more deadly than bullets, and I have wrecked more homes than the mightiest siege guns.

I steal, in the United States alone, over \$300,000,000 each year.

I spare no one, and I find my victims among the rich and poor alike, the young and old, the strong and weak. Widows and orphans know me.

I loom up to such proportions that I cast my shadow over every field of labor, from the turning of the grindstone to the moving of every railroad train.

I massacre thousands upon thousands of wage-earners a year.

I lurk in unseen places and do most of my work silently. You are warned against me, but you heed not.

I am relentless.

I am everywhere—in the house, on the street, in the factory, at railroad crossings, and on the sea.

I bring sickness, degradation and death, and yet few seek to avoid me.

I destroy, crush and maim; I give nothing, but take all.

I am your worst enemy.

What is the answer to this riddle which the "Toledo Blade" propounded to its readers? The answer is not "drink" or "hatred" or "selfishness." The answer is "I am Carelessness."

WATERPROOFING CONCRETE.

It has been found impossible to make concrete entirely waterproof, especially when it is subjected to a heavy water pressure. A mixture of one part cement, two of sand and four of gravel, if made of medium consistency and thoroughly tamped into the forms, will be fairly waterproof and its imperviousness can usually be materially increased by additional tamping. The usual process in making concrete impervious to water has been to add compounds of alum and lye or soap, which have been of service, but recently a superior method has been found. This consists of washing the surface of the concrete on the exposed side with one part concentrated lye and two parts alum dissolved in sixteen parts water. Two or three coats of this compound should usually be applied, allowing time for each application to dry before putting on another.

By the addition of from 5 to 10 per cent. of hydrated lime to the cement before mixing, the waterproof qualities of the mass are considerably increased, but the concrete itself is somewhat weaker. The use of a larger proportion of cement without lime will also

make the concrete more waterproof, but the additional cost entailed by this method will frequently act as a deterrent. In cases where the concrete is to be subjected to considerable water pressure, the surface of the exposed side should be coated with asphalt, pitch or alternate layers of pitch and tarred felt. Melted paraffin, applied while hot with a brush, is also an effective method, but it is an expensive one where the surface to be covered is of a large area.

RECENT TRADE LITERATURE.

The Bulletin of the Municipal Art Society of New York, No. 7, comes from the press with its pages embellished with illustrations of the society's prize designs for a Naval Reviewing Stand, their gala appearance lending a festive character to the issue. These are the result of the annual competition instituted by the Municipal Art Society in the Society of Beaux Arts Architects, and with their elaborate architecture and brilliant banners and awnings suggest what an artistic feature of a Hudson River naval parade any one of them would form. The first prize was awarded to Robert Palleson, of New York City, and medals to R. K. Harris, R. M. Kennedy, H. S. Kirschberger, S. Y. Ohta, R. O. Derriek, R. D. Murray, E. E. Weihe and A. Brown, Jr.

Few cities have New York's problem of adding to the comfort and display of a naval review, but every city is vitally concerned in the majority of the needs which brought the Municipal Art Society into existence, and the story of its founding and purposes which occupies a large part of the Bulletin should be of wide interest.

The Bulletin is more than usually full of pertinent discussion of the new zone plan, play streets for children, the billboard nuisance, the Anti-Litter League and news of the activities and achievements of the neighborhood associations. If these things interest you, write to the society for a copy.

* * *

"Evans' Almetal Fire Doors and Shutters" is the title of an attractive folder issued by the Merchant & Evans Company, of Philadelphia in the interest of one of the most widely known of this progressive concern's many fire prevention specialties. The many advantages of the Evans doors and shutters over similar devices are set forth in detail in this folder, which is of interest to architects, engineers and others alive to the importance of fire prevention. This door is a marked improvement on the standard tin clad door in general use, demonstrated its great superiority at tests at the Underwriters' Laboratories, and has the endorsement of the National Board of Fire Underwriters. A chart of sizes and prices is a feature of the folder which presents in addition certain data regarding the

Evans Automatic Sprinkler Apparatus and the New Standard "Star" Ventilator. A line to the Merchant & Evans Company, Philadelphia, Pa., will bring a copy of this and other instructive folders to parties interested.

A NOTABLE COMMUNICATION ON NATIONAL DEFENCE.

A communication dealing exhaustively with the national defense problem from Powell Evans, president, to the employees in all offices and works of the Merchant & Evans Co., Globe Automatic Sprinkler Co. and the Schuylkill Railway Co., 2035 Washington avenue, Philadelphia, Pa., has been reprinted for general distribution. This reprint contains a note to the effect that a wide distribution is desired, that reprinting will be allowed on request and that copies in quantities will be supplied at cost.

Mr. Evans in this communication ably discusses the subject from all angles, and points out now and why every American citizen can help in this movement. In one of the parts of the communication Mr. Evans explains what measure of defense can now be taken and how the individual can share in the work and cost.

He extends an invitation to the employees of the several companies to go to one of the various summer training camps for four weeks. He states that full wages will be paid for three of these four weeks to all employees who go, and that expense of transportation to and from camp, with the cost of going through camp, will be provided where circumstances warrant.

ANTIQUITY OF GLUE VENEERING.

Among the many occupations of the carpenter, that of veneering is noticed in the sculptures of Thebes as early as the time of the third Thothmes, who is supposed to be the Pharaoh of the Exodus, and the application of a piece of rare wood of a red color to a yellow plank of sycamore or other ordinary kind is clearly pointed out, says a writer in a London magazine. In order to show that the wood is of inferior quality the workman is represented to have fixed his adze carelessly in a block of the same color while engaged in applying them together. Near him are two other men, one of whom is employed in grinding something with a stone on a slab, and the other is spreading glue with a brush. It might, perhaps, be conjectured that varnish was intended to be here represented, but the appearance of the pot on the fire, the piece of glue with its concave fracture, and the workmen before mentioned applying the two pieces of wood together, satisfactorily decides the question and attests the invention of glue more than 3,000 years ago.

The Standard Documents of the American Institute of Architects

The New Contract Documents of the American Institute of Architects are now on sale and replace the old Uniform Contract, which is to be discontinued

PRICES FOR SINGLE COPIES

Agreement and General Conditions in cover	\$.10
Bond of Suretyship	.02
Form of Subcontract	.02
Letter of Acceptance of Subcontractor's Proposal	.01
Complete set in cover	.15

Trial set delivered upon receipt of nine 2-cent stamps.

These Documents have received the full approval of the Institute, through its Convention, Board of Directors and Officers. They are the outcome of nine years of continuous work by a Standing Committee on Contracts and Specifications. This Committee, comprising some of the ablest American architects, was assisted by the Institute's forty Chapters; advised by eminent legal specialists in contract law and aided by representatives of the Building Trade Associations of the United States. The forms have been officially approved by the National Association of Builders' Exchanges, the National Association of Master Plumbers, and the National Association of Steam and Hot Water Fitters.

Editorial Comment

The Ad Men and Advertising.

The Ad Men talked advertising here in Philadelphia for ten days, talked every phase of it. The men who did the talking are admitted past masters in their respective lines; high-priced experts from all over the world. They talked trade magazine advertising, among other things, and were a unit in awarding to this class of publicity a high place among the agencies which make for success in modern merchandising. Some of the points made in the course of these talks on trade paper advertising were worth tucking away for future reference. The important questions in connection with the trade paper, regarded from the angle of the advertiser, are these:

1. Does it reach a class that can be interested in the product I have to sell?
2. What style of an "ad" is best adapted to appeal to the class reached?
3. Is my product one to be urged along the line of general publicity or to be so pressed as to bring the individual order?
4. Am I after the jobber, the consumer or the retailer?
5. In the case of the building trades journal, is my appeal to the architect, the builder, or the sub-contractor in a given branch, or to all three?

Having answered these questions to one's satisfaction, the course then is to decide just what amount of space is necessary.

This space question is where most beginners at the advertising game go wrong. A small space belittles a big house. A big space is bad technique for the little house. There must be judgment here as in other phases of advertising. Having decided what quantity of space will be about right, the

thought occurs as to how that space is to be filled. Most advertisers, certainly most of those who are new to advertising, fall into the error of trying to say too much in each "ad."

Telling the Story in Chapters.

You can't cover your sales proposition in one "ad." You can't possibly tell the whole story in a few inches of space. The way to tell your story is in chapters—just as the novelist does it or the newspaper man or the dramatist. You don't catch the dramatist trying to crowd everything into one act.

As a rule he resorts to not less than three acts and not infrequently to anywhere from three to five scenes. And by breaking his story up into episodes, keeping in mind their chronological sequence and holding them together by a clearly defined narrative thread he leads your interest along from act to act, grips your attention, enmeshes you in the "feel" of his motif and carries you along to the big punch in his final climax.

Good advertising is like that. You break your story up into a series of points, treating one point at a time.

Don't try to say much. A few good, telling sentences, attractively displayed, not crowded, with plenty of white space about them to rest the eye and make them stand out—that's the idea.

What to say?

What does your salesman say when he is selling goods?

The average salesman's story, broken up into small sections, makes good advertising.

Points to Be Covered in an "Ad."

Broadly speaking, a few of the points advertising to be effective should cover, are these:

What is your product?

What is it good for?

What are its special advantages, if any, over other products, used for the same purpose?

Is it cheaper either in first cost or in lasting qualities?

Does it go further in application?

Is it easier to apply?

Is it adaptable for special uses to which competing products do not lend themselves?

Can you supply it from stock?

Do you carry it in variety to meet all demands?

Can you ship promptly? Etc., etc.

Modifications of these points will suggest themselves in the case of lines that do not fall within this grouping. The essential thing is that advertising to be effective must present in a common-sense, easily-grasped style all of the good points to be found in the product advertised.

There are houses, here and there in the building trade, and, we fear, in some other lines, in which advertising is not given the attention it should have. We could have wished it possible to get the heads of these concerns out to hear the Ad. Men during the recent convention.

Advertising is the greatest of the great forces in modern merchandising.

It is the dynamo that drives the wheels in the business of to-day.

It is the controlling factor in big business.

* * *

Growing Vogue of the Small House.

The tendency of city people of the more affluent sort to give up the annoyances of housekeeping for the comfort and convenience of apartments is duplicated in a way by the growing disposition of suburbanites to turn to "the small house." Thanks to the facilities for entertaining provided by the country clubs and the large modern hotels, there is no longer the necessity that used to exist for country houses

**DRAWING
MATERIALS**

CHARLES H. ROBBINS, JR.

125 S. 11th Street, Philadelphia
BELL PHONE, WALNUT 1086 KEYSTONE PHONE, MAIN 497

**BLUE
PRINTS**

built to accommodate large social functions. The great country house with its army of servants, its elaborate gardens, its spacious grounds and out-buildings is slowly but quite perceptibly losing its vogue. Wealthy people are turning to the moderate sized country house, with its atmosphere of coziness and cheer, its exclusiveness and ease of maintenance. There is a tendency to confine the entertaining to smaller groups. The occasional large function is staged at the country club near by or at the roof garden of one of the big city hotels. Lavish hospitality is, we are told, going out.

The medium sized country house has a charm that the finest designing finds it difficult to inject into the more elaborate structure. And people are awakening to the fact that the smaller house is much easier to keep in order, entails less of worry, of fret and of annoyance.

An architect of prominence remarked the other day that the vogue of the big country place went out with "the family driving horse." "When every family had its driving and saddle horses, its stables and pastures, the large country house held its popularity," said he. "With the coming of the automobile and the garage and the elimination of the coachman, the footman, the groom and the stable lackeys, the big place ceased to be the necessary institution that it was in the heyday of the horse."

Be that as it may, the demand to-day is for the country house of medium size.

* * *

A Public Sale in 1748.

Here's the style in which the auction sale of a house in Stone street, New York City, was announced in the pages of "The New York Weekly Post Boy," a colonial newspaper of that day:

"To be Sold at publick Vendue, on Tuesday the 19th Day of this Inst. February.

"A Dwelling-House and Lot of Ground belonging to the estate of Adrian Man, deceased, situate in Stone Street, opposite to the House of John Harris; tis convenient either for Store or Shop, has two Rooms on a Floor, and two Shops; two Cellars, one front, the other back; and a Kitchen, back, with a Room over it; there is also a good Yard Pump, and a Stone Cistern. In the meantime if any Person inclines to purchase, he may apply to Samuel Fell, Tobacconist, or to Johannes Man, Sadler, at the North River in New-York, who will dispose of the same on reasonable Terms. The title is indisputable."

Note the quaintness of the phraseology, the reference to "a good Yard Pump and a Stone Cistern" and to the

fact that the title "is indisputable," and the careful mention of the circumstance that the house to be sold was "opposite to the house of John Harris."

Building Activity Shows Gains.

Ninety-seven cities reporting Bradstreet's Journal for June show a total estimated investment in building operations of \$61,304,209, a gain of 56 per cent. over June a year ago; sixty-two cities show increases and thirty-five report decreases.

Among the cities making gains in June were New York City (three boroughs reporting), with an increase of 140 per cent.; Philadelphia, 32.8 per cent.; Cleveland, 15.2 per cent.; Detroit, 85 per cent.; Portland, Ore., 113.7 per cent.; Chicago, 45 per cent., and Los Angeles, 4 per cent.

Building in the second quarter of 1916 showed a large total, \$266,163,370, as against \$193,689,520 in the first quarter, a gain of 32 per cent. for the second three months, as against an increase of 18 per cent. in the first quarter. Expenditures for the half year aggregate \$459,852,890, a gain of 26 per cent. over the like period last year.

Lowell on Italian Villas.

Guy Lowell has written a delightful volume on "Smaller Italian Villas and Farmhouses," a volume filled with photographs and sketches made by him in the course of years of wandering in European byways.

Mr. Lowell finds the American delight in Italian buildings due less to the associative interest of history and anecdote than to a certain similarity in tastes, in scenery, and climate characterizing the two nations. Certainly the logical simplicity and reserve of a Florentine villa with its plain white wall spaces accented by small spots of rich decoration, its compact grouping of rooms, its artistic feeling for contrasts of light and shade, its interesting fenestration, make it well worth study by young architects to whom the increasing popularity of the country house brings temptation toward elaboration and eccentricity of design.

The illustrations range from a simple farmhouse nestling against a mountain side on a buttressed terrace, to the elaborate Palladian structures of Lombardy which approach the monumental character of palaces. The author cautions us against letting our imagination revive the groups of brightly dressed courtiers and patricians, or invest the gardens with the legendary shapes of faun and dryad. From the architectural point of view the buildings and their environment must be seen prac-

tically, and our minds may work for their satisfaction upon nothing more remote from the true problem than the reconstruction of the minor ornaments and arrangements of color expressing the human enjoyment taken in the decorative charm of the place.

* * *

Unity of Impression in Design.

"It is on the Albanian Hills, near Rome," writes a reviewer, "that we find the art of the villa extended to the surrounding garden. These magnificent gardens, built under the patronage of Leo X., son of Lorenzo de Medici, mark the change from practical economy in building to purposes of enjoyment unrestrained. They were brought close to the door of the house, as William Morris has said all gardens should be, and were crowded with decoration. 'It is not easy,' the author says, 'to recreate the spirit of design that made these gardens artistic masterpieces, for the contrast of depth of shadow in the foliage and brilliant sunlight on stone work, path, and pool, which one obtains in a garden, requires just as much study and balancing of proportion, just as careful comparison of light and dark as does the shadowing projection of a cornice, or the relation between wall space and window opening in a building. This the artists of the sixteenth century felt, and with it they seemed to combine a real understanding of the character of the outlying scenery, so that they successfully solved the most difficult of all problems in garden designing—they tied their formal gardens in one complete pictorial composition to the landscape beyond. This close union between building, garden, and outside landscape seems to be more natural owing to the fact that the architect of the early Renaissance took complete charge of the building operation. Leonardo, Michael Angelo, Raphael, were not only artists in every sense, but they were also engineers. The laying-out of the garden and the farm group was expected of the architect as being simply one of the branches of his art; it was natural that incidental architecture in the gardens should have been appropriate and decorative in a marked degree.'

"In this lies the explanation of the whole glory of the 'great periods' of art. Unity of impression was gained as a matter of course. It is the centrifugal force of modern civilization that works against a coherent style in modern art."

EDITORIAL COMMENT

(Continued from page 458)

the Middle Ages. In his book on "Gothic Architecture in France, England and Italy," Sir Thomas Graham Jackson tells us some things about these wonderful mediæval workmen that go to show that they were not the pious servants of art and the Church in those days that they were supposed to be. For example:

They laid the foundations of Winchester on a peat bog, and at Ashbourne the foundations are put together without mortar. At Chichester, before the spire fell, the mortar of the interior of the piers ran out like water when a stone was withdrawn. The lovely early English tower of St. Mary's at Stamford, to which Sir Walter Scott used to take off his hat when posting through the town northward, is put together with nothing but dirt scraped off the road and containing very little lime, if any. But while they scamped and shirked, their works live to praise them, and the author laughs to scorn the popular notion that these works were not the outcome of master brains creating buildings each with an individual character.

"There can be no artistic conception without an author," he says, "and it is absurd to suppose that the design of any great building in the Middle Ages came of itself from the associated labor of a group of builders without a single head over them to direct, as some fanciful people would have us believe. A great work of architecture can no more come into being that way than a great picture from a committee of painters or a great poem from one of the poets."

EDITORIAL NOTES.

The fear that modern high explosives may demolish the few remaining examples of great architecture is expressed by Sir Thomas Graham Jackson. "It is difficult to see," he writes in his pre-

face, "how any architecture is to survive modern methods of warfare. Buildings that have for hundreds of years looked down on changes of masters and have survived battles and sieges during the Middle Ages and the Napoleonic campaigns, crumble into dust at the awful touch of the modern engines of destruction. Unless wars should cease in all the world we may be the last who will see the wonders of ancient architecture."

* * *

It is claimed for the new Cleveland Museum of Art that it is one of the most effectively planned institutions of its kind in the United States, embodying in one structure features that in no other building are to be found under one roof.

The Cleveland architects, Messrs. Hubbell and Benes, prepared the plans in consultation with the late Edmund B. Wheelwright, of Boston; Mr. Henry Kent, of the Metropolitan Museum, and other experts aided in solving practical and aesthetic problems, and the beautiful building resulting from their intelligent and interested effort probably is the most effectual museum and the most attractive in the country.

LUMBERMEN PLAN FREIGHT INQUIRY.

Plans are rapidly being completed by Government and lumbering association authorities, for the opening of the greatest rate investigation in America's history of freight rate regulation, which will begin on July 1, when a complete study of freight rates will be opened, to take up every freight rate involving lumber or any of its products. There are 18,000 tariffs to be examined, and the lumber associations on their part have compiled tables showing all shipping details on 50,000 cars of lumber and lumber products in every part of the country.

The investigation is not a complaint of the lumbermen against the railroads, or an effort on the part of the railroads to increase rates. It is, on the contrary, an effort on the part of the Interstate Commerce Commission to make a national reclassification of rates.

The purpose is to so divide the present rate fabric in such manner as to establish a relationship between manufactured articles of all descriptions and the rough lumber from which these articles are made. It is not in any sense a rate fight between the carriers and shippers, but the biggest revolution ever proposed in rate regulation. It is proposed to so change shipping customs that there will be uniform tariffs in all parts of the country on lumber products, from the second producing industry in America, instead of thousands of different rates.

The lumbermen, however, fear that this proposal would mean the passing of the mixed car trade, with disastrous effect alike to the producers, carriers and consumers.

SOME MORE ADVERTISING "DONT'S."

Don't try to do a million dollar business on a two thousand dollar basis.

Don't try to advertise a quarter page proposition in a three-inch space.

Don't belittle a big business reputation by running a piking little "ad" among piker competitors.

Don't overlook the fact that as a man is judged by his stationery, so a firm is judged by its advertising.

ORDERS \$15,000,000 HOTEL IN NEW YORK.

To go out and order the greatest hotel in the world quite as one would order a suit of clothes sounds like the dream of a rarebit fiend or the imaginary adventures of a modern Aladdin, says the "National Real Estate Journal."

That, however, is just what happened in New York recently when Charles H. Ingersoll, the watch manufacturer, president of the Commonwealth Hotel Construction Corporation, and his associates approved a contract with Hoggson Brothers, originators of the Hoggson single contract building method, for the delivery of a \$15,000,000 hostelry.

The hotel is planned to be erected in the Times Square district of New York; the \$15,000,000 is to cover the cost of the site, the building and its equipment. The building is designed to occupy an entire block front and is to be 28 stories high. It is planned to contain 2,500 rooms or more—nearly twice as many as the largest hotel now existing.

The Commonwealth Hotel Construction Corporation is a co-operative concern, which plans to have about 150,000 shareholders, each of whom, except the directors, will own a single share. The directors, in accordance with the laws under which the company is incorporated, will own three shares each.

It was desired to know in advance that the hotel building would not cost more than the sum which the corporation or association desires to spend. Hence the single contract, which covers the services of architects, engineers, builders and decorators, in addition to building materials and furnishings, which are to be installed upon the completion of the hotel. The contract, in brief, binds Hoggson Brothers, for a stated sum, to take a building site and within a stipulated sum to deliver a fully equipped hotel, ready at the touch of a button to receive guests and give full service.

Read "The Guide." Read it all through. Don't let a single item escape your notice. You'll be surprised what a lot of valuable information is crowded into its pages in the course of a year.

METAL BUILDING CORNERS.

The desire to finish corners and angles of buildings with mitred, beveled siding has made it necessary to provide devices suitable for protecting these corners. In both mitred or lapped siding there is always a tendency and a strong possibility that the joint will be opened by the weather, which would make it unsightly and lead to early decay.

There is on the market a metal building corner which has been designed to cover the joints in siding, either in external or internal angles, square or corners of other shapes. These are made in a wide variety of styles and sizes to suit the requirements of the siding, whether three-inch, narrow lap siding, or ten-inch, extra wide boarding.

Residence, near Johnstown, Pa. Architect, Henry L. Reinhold, Jr., 1309 Walnut street,

Protection for Lawns and Gardens ANCHOR POST FENCES

are not the ordinary kind—they are fences of heavy galvanized netting erected on Anchor Posts—posts which won't sag or get out of line, and are galvanized both above and below ground to prevent rust.

In addition to fences and iron railings and gates of every kind we make tennis court, chicken-run and kennel-yard enclosures.

Haddock & Co., 804 Orange street, and J. A. Bader, du Pont Building, Wilmington, Del.

It isn't enough to just advertise. There is competition these days in advertising, as in other things. You must make your advertising attractive. You must make it say something,—something definite, original and convincing. If you lack faith in your own ability to do this, let us do it for you. Give us the facts. Talk to us just as you would to a prospective buyer. That is the kind of talk that makes profitable advertising. We'll look after the verbal frills. That's our business.

BUILDERS' GUIDE

Devoted to the Advancement of American Architecture, Structural
Engineering and the Building Trades

VOLUME XXXI
Number 29

PHILADELPHIA
July 19, 1916

As The Editor Sees It

What the Zone System Stands For.

THE importance of the zone system, as an agency for the protection of residential sections against the invasion of undesirable and depreciating lines of trade, is slowly but surely enlisting the attention of builders and investors. It is beginning to be recognized, for example, that the investor who at a considerable outlay places an attractive improvement in a desirable locality has the right to insist that his investment be safeguarded against the depreciation incident to the intrusion into that locality of a stable, a factory, a garage, a tenement, a flashy theatre, or a billboard stand or any one of a dozen other structures out of key with the general character of the neighborhood and adapted therefore to lower its desirability or to change unfavorably its aspect as a community center. A writer in the pages of *The New York Real Estate Record and Guide* discusses the zoning system with an intelligent grasp of its salient features.

* * *

City Should Protect Owners.

THE whole problem is not solved with the grouping of the buildings that are used by all, says the writer. There is the most urgent need of putting order into the development of all of the private property in the community by controlling the height of buildings, the area of their yards and courts, and the character of their use all in the interest of the neighboring property. A home owner has no redress against a man who puts up a factory, tenement or garage next door. The city should protect him. Only by this means can homogeneity and harmony in the community be attained.

As one lets the imagination play with the possibilities of such a plan, there unrolls gradually a vision of the great city

plan of the future; a city of many villages all woven together, each complete and sufficient unto itself in the ordinary, every day things, but reaching out beyond for those that are extraordinary. Thus a number of villages would unite in one central group their higher schools, their central libraries, theatres and big auditorium, their concert hall, their armory and their larger playfields. Great central groups for the whole city would contain universities, art museums, institutions for the care of the sick and needy and finally as the culmination for the whole city, the central administrative, legislative and judicial group. Meanwhile the ideal street and transit system would connect all the various units of the plan together into one vast but perfectly co-ordinating organism; a triumph in the adaptation of form to function.

* * *

Few Men Sense the Great City.

THE best and often the only way in which the average man can obtain a real conception of the majesty and glory of the great city is to let his imagination run the gamut from the functioning and planning of the small local unit through the various more inclusive groups up to the great civic center. Very few men really sense the city. It is too big, too complex. But through taking an active part in the congregate life of the small neighborhood one does become imbued more and more with a sense of the community. He realizes that in the many-sidedness of modern life man cannot live apart; he must co-operate with those about him for their common good. The existence of the Community Center as described above would serve strongly to accelerate the crystallizing of such feelings. Once a man has acquired the community sense he is in a far better position to appreciate the true content and meaning of the various inter-

relationships of neighboring communities, and so on up until eventually some day, perhaps as in a vision, the whole great panorama unrolls before him, and in all its wonder and beauty he senses "The City."

* * *

Aymar Embury on the Small House.

WE had something to say in the last issue of the GUIDE about the growing popularity, even with people of more than ordinary income, of the small house. In the current number of that excellent magazine, *The Craftsman*, Mr. Aymar Embury, distinguished as a designer of attractive country houses, discusses just this type of house.

Aymar Embury, who has made a special study of small house building, says that though the question of cost comes always between the builder and his desires the final compromise is often something satisfying beyond expectation. When one thing that can perhaps be spared must be given up in favor of something that cannot, of course it is a useless ornamentation that is sacrificed in favor of better material, therefore the result is a structure simpler, more compact, than would have been obtained had the original idea been carried out.

More thought is given to the economy of space and to the kind of material which will be used, the kind that will not have to be renewed every few years. Thus by working within strict limitations better and more artistic results are often obtained. Mr. Embury points out that the cost of houses is broadly determined by three things—size, kind of material and complexity of the plan. Certain things are almost invariably demanded nowadays even in the small houses, such as hardwood floors, tile bathrooms, first-class plumbing, lighting and heating plants. The smaller the house the more watchful and ingenious must be the architect that everything may be obtained

**DRAWING
MATERIALS**

CHARLES H. ROBBINS, JR.

KEYSTONE PHONE, MAIN 497

**BLUE
PRINTS**

of the best quality possible, and so arranged as to afford the utmost possible convenience in the working facilities of the house. Every item must count; there must be no idle walls or waste spaces, no unnecessary ornamentation. Beauty is striven for in the main outlines, the silhouette; and the gingerbread ornamentation that fortunately could not be afforded does not mar the simple elegance of the house.

* * *

The Question of Lighting Fixtures.

OUR new and lusty young contemporary *Realty* thinks not enough attention is given by architects and builders to the subject of lighting fixtures.

There is one thing that architects, builders and people who have houses built for speculation seem to forget, or rather ignore entirely, and that is the lighting fixtures, says *Realty*. Oh yes, they put fixtures in the houses, but only for the same reason that they put in windows. The trouble is, while they usually display some intelligence in locating the windows and determining the number and size of them, so far as the law makes this work mandatory, lighting fixtures seem to be without the pale of the law and are put in just as a matter of course, fearful, perhaps, that the owner could not get a tenant if he omitted such a trifle.

Apparently it makes no difference how large a room may be or how high the ceiling, you will find a common gas pipe stuck through the center of the ceiling just far enough to permit the gas to be lighted without setting fire to the place. Possibly it is a combination fixture—they are quite common these days. In such a case it is the same, with the gas jet sticking off at one angle and the electric bulb at another. These are so high that the average woman has to use a chair or a taper in order to turn on the light. No effort is made to place the fixtures where they will be of the greatest service.

* * *

Fixtures Placed Too High.

IN designing a house much effort is given to economizing on space and arranging every room so as to provide the greatest amount of space and comfort. The aim is to get as much room as possible with the expenditure of the least possible material in order to secure the greatest amount of interest on the investment. Yet, where is the person who builds, unless it be for his own occupancy, who takes any thought of providing sensible lighting fixtures. It need not be a question of cost. The same fixtures commonly used now could be placed more advantageously and dropped

a foot lower so the women of the house could reach them.

Manufacturers of fixtures endeavor to educate the public, but so far have had limited success with architects and builders. There are medium priced fixtures on the market that are pleasing to the eye, and if some effort was made to show how fixtures should be placed to render the greatest amount of light, it would pay not only the manufacturer, but also the landlord, for the tenants would feel more satisfied. They would be getting more light units at a less expenditure of money.

* * *

EDITORIAL NOTES.

The Lehigh Cement Company is putting out the cleverest and most effective cement advertising that has come to our notice within recent years. It is not only good copy, but is most judiciously illustrated and typographically striking.

* * *

Some day the builders will get together and agree to quit guessing. And when that day arrives there will be fewer buildings constructed by the average building firm, but on the other hand, the average firm will make more money. There isn't another business in the country to-day that would tolerate the kind of competition that exists in the building field.

* * *

Merchandise is dumb—until seen; then it speaks louder than words. To bring people into the store to see the merchandise—to speak for the merchandise until it can speak for itself—is the first step in effective advertising.—*Joseph H. Appel*.

* * *

Advertising will sell anything. The day when advertising was limited to certain retail lines has passed. Advertising is used to-day more extensively by the manufacturing producer than ever before in the world's history. And it is producing results in every line.

* * *

Do not worry; eat three square meals a day; say your prayers; be courteous to your creditors; keep your digestion good; exercise; go slow and easy. Maybe there are other things that your special case requires to make you happy, but, my friend, these I reckon will give you a good lift.—*Abraham Lincoln*.

* * *

Join your local exchange, Mr. Builder. If you haven't a local exchange stir around and get your friends interested in organizing one. The Philadelphia Master Builders' Exchange is a power for the advancement of the craft and supplies an excellent model for the town inter-

ested in promoting an organization of the kind.

* * *

"Early to bed and early to rise, hustle like Hell and advertise." A little strong—but what about it, brother?—*Macey Monthly*.

* * *

Luck is just another name for good hard, persistent plugging. Luck is with the merchant who advertises, not because he advertises, but because he keeps on advertising indefinitely—which means success.—*Fits*.

DISTRICTING CITIES.

Twenty-five years ago any one venturing to propose a law by which a property owner would be denied the right to use his property as he saw fit so long as he did not create a nuisance would be called un-American if no worse name. But ideas are changing rapidly. Boston has not only limited the height of buildings, but has fixed different height limits for different districts. New York is now going further, and is preparing to do what every student of the subject must see is the only truly economical and other wise proper thing to do—divide the city into districts and restrict the use which may be made of the property in each district.

The city charter of New York conferred on the Board of Estimate and Apportionment power to district the city for the purpose of regulating the height of buildings, the area of courts and yards, the location of trades and industries and the location of buildings designed for specified uses. The Board appointed a Commission on Building Districts and Restrictions, and this committee on March 10th submitted a report of about 8,000 words in which it presents recommendations as to districting with reference to height and area of buildings and the use to be made of property, residential, business or industrial, in a given district.

The advantages of districting cities seem to be indisputable once the plan is inaugurated, the only individual sufferers being those which are already using their land in a way which is barred by the new restrictions. Real estate will almost invariably bring a higher price when the future development of the surrounding area is definitely fixed than when the owner of the adjoining property may use it for any purpose he sees fit or erect a building as high as he pleases. This applies not only to residences, but to business districts as well. —"Municipal Journal," New York.

WHAT GRANITE IS WORTH.

A cube of Woodbury granite, one hundred feet square, after it is quarried and moved from the ledge, is worth a million dollars. A block of granite this size would build a collection of State Capitols and City Halls and in addition, a lot of banks and office buildings.

THE Allen

This is the Prosperity Car!

It is rich in every expression of comfort, ease of operation, economy on road or street, great power, and smart appearance. It is a car that gives the impression of \$1500 rather than \$795—and in performance it lives up to its appearance. Trade News and Gossip

Cullings from the Week's News with a Special Interest for Men Engaged in the Structural Industries—What is Happening in Trade and Architectural Circles.

**With the object of bettering manufacturing and market conditions, brick and other clay products manufacturers in the Raritan River section of New Jersey have recently organized the Monmouth Manufacturing Association. The president of the newly-formed organization is J. A. Fitzinger, of the National Fireproofing Company, Lorillard. G. J. Craigen, of the Craigen Brick Company, Cliffwood, is first vice-president; B. K. Eskesen, of the Matawan Tile Company, second vice-president; C. E. Watrous, of the Munting-Loeb Company, Matawan, secretary, and W. A. Gill, of the Renwreck Company, Keyport, is treasurer.

**Miles W. Beemer, of Jersey City, N. J., has been appointed secretary of the New Jersey Tenement House Commission, to fill the vacancy caused by the recent death of Charles J. Allen. Charles E. Eichels, a clerk in the department, has been appointed assistant secretary.

**Those who postponed building operations in the hope that steel would be lower in price were perhaps well advised, especially if they were not sure of a prompt leasing or selling market. But steel has had a considerable recession already, and the time ought not to be far away, with a continuance of the downward movement, when it will be time for every prospective builder to take action.

**F. G. Schaefer, under the trade name of F. G. Schaefer Iron Works, has established a structural steel shop at Eighteenth street and Hackensack avenue, Weehawken, N. J. The shop consists of a building 40x125 feet on a plot 200x400 feet, with a railroad siding, and within one thousand feet of tidewater. Mr. Schaefer was formerly connected with the Hinkle Iron Company, John J. Radley & Co. and the Riter-Conley Co., of Pittsburgh, Pa.

**Structural steel, which cost 3 cents a pound a month ago, can now be had for 2.50c., and a prominent jobber made the prediction

this week in the writer's hearing that it would be obtainable for 2c. by the 1st of October, for mill shipments, any delivery, or 2.16 New York f. o. b. When this level is reached, he said, he will consider that steel has returned to a normal basis.

**Alsen's American Portland Cement Works announces the acceptance of the resignation of R. S. Sinclair and the appointment of William P. Corbett as first vice-president and J. W. Kittrell as general manager.

**In recent years a very large growth has occurred in the use of gypsum plaster blocks, principally for the construction of partitions in fireproof buildings. The recent convention of the New York State Builders' Supply Association had this fact called to its attention by S. G. Webb, secretary of the Gypsum Industries Association, Inc. Many tests have been conducted by the Underwriters' Laboratories and other institutions which have demonstrated that gypsum block partitions have a very high efficiency in fire resistance, and so their growth in popularity has been rapid, until to-day in the country at large probably sixty times as many gypsum plaster blocks are used as were used only eight years ago.

**Mortimer L. Neinken, of Brooklyn, was awarded the \$100 prize offered by the Barber Asphalt Company, to the student of highway engineering at Columbia University, for his

paper on the comparison and selection of roads and pavements.

**The unusual activity on the part of the city authorities within recent years toward the removal of street encroachments recalls the historical reason for the presence of one of the most common of sidewalk encroachments, namely, the stoop to the private house. This element in construction may be traced back to early Dutch Colonial settlers who brought the idea over from Holland. In that country they were compelled to build their homes with stoops, so that they might be protected during flood times. When they came over to New Amsterdam, they built their new homes on the European plan, not so much on account of the fear of floods, because New York City has yet to be flooded, but simply as a matter of custom.

**Henri Vallet, architect, 192 Main street, New Rochelle, N. Y., has formed a partnership with George J. Fernschild, Jr., under the firm name of Vallet & Fernschild. The office of the firm will be continued at the former location.

**The Portland Cement Association reports that between January 1 and June 1, 1916, contracts for 10,247,465 square yards of Portland cement have been contracted for, to be used for pavements throughout the forty-eight States of the Union.

**The Association of American Portland Cement Manufacturers recently passed an amendment to the constitution changing the name of the organization to the Portland Cement Association. A New York office has been opened in the Architects Building, 101 Park avenue, in charge of Lewis R. Ferguson.

**Edward T. Terry has recently formed the Terry Manufacturing Company, with offices in the Grand Central Terminal Building, New York, to carry on the business of manufacturing cranes, derricks and structural steel, formerly handled by the Terry & Tench Company, Inc. The business of the Terry & Tench Company, with the exception of the above departments, will be conducted as usual.

**Officers and directors of the Plumbing Supply Association of Philadelphia for the ensuing year were elected on June 29th at 505 Arch street, the association headquarters. Those chosen are: J. Harvey Borton, president; Edward S. Thompson, vice-president; Frank H. Shuster, treasurer, and Thomas A. Fernley, secretary.

**Holland is suffering from a serious shortage of timber for building purposes, and the existing supply will be exhausted within a few months unless relief measures are taken, according to the report of an association of employers and workmen in the building industry, which recently met in Amsterdam. The only hope, according to the association, is to secure large quantities of timber owned by Dutchmen which are now tied up in the harbor of Archangel, Russia. This can be done, it is pointed out, only by assuring the Russian Government that the timber will not be sent out of Holland for use in the countries now at war with Russia. It was resolved to urge the Dutch Ministry of Commerce

and Industry to take the necessary steps for releasing the cargoes detained at Archangel. Other cargoes consigned to Holland are tied up in the Russian port of Riga, but under existing conditions there seems to be no hope of their being released.

**Super-glass is the name of a new "made-in-Philadelphia" product designed to help development of the "safety first" movement. After years of experiments abroad and in this country, a Philadelphia inventor has succeeded in producing window glass that will not splinter even if struck a powerful blow by some hard missile. Automobile windshield manufacturers and several railroad companies are investigating the claims of the new invention, which was displayed at the car builders' meeting held recently in Atlantic City. Test orders have been placed with the Super-Glass Company and plans are about complete for enlarging the present plant in Tacony. The Hires-Turner Glass Company, a Philadelphia concern, is distributor.

**Frank L. Shuman is the inventor of super-glass. The new glass is made up of two pieces of polished plate glass, between which is a sheet of celluloid. The glass and celluloid are welded together under high temperature and tremendous pressure, forming a solid sheet. The product possesses unusual resiliency and is so tough that a .22 calibre bullet fired at close range in tests failed to penetrate, while if the glass is struck with a hammer or heavy rock the only result is to mar the polished surface with a series of fine hair lines or cracks and there is no shower of flying glass or splinters. The product is about four times as expensive as ordinary plate glass. Factory officials are reticent as to the actual present output, but an official of the Hires-Turner concern recently stated that an addition to the Tacony plant was soon to be built.

**Charles Amolick, plumbing and heating contractor, 1025 DeKalb avenue, Brooklyn, desires catalogues and samples from jobbers and supply houses.

**Bergen & Lindeman, Inc., contracting

engineers, have recently moved their offices from 30 Church street to 189 Broadway, New York.

**The American Society of Heating and Ventilating Engineers will hold its semi-annual meeting at the Hotel Statler, Detroit, Mich., July 19-21.

**The H. B. Smith Company, Westfield, Mass., manufacturers of boilers, radiators and steam and hot water heating supplies, has recently moved its New York office and showroom to East Thirty-ninth street.

**Peter J. McKeon, consulting engineer on fire-prevention and building regulations, has recently moved his offices to the Astor House Building, 217 Broadway, New York.

**Charles H. Brettler, heating and plumbing contractor, 62 Tompkins avenue, Brooklyn, desires catalogues and samples from manufacturers and jobbers in heating and plumbing supplies.

**The National Electrical Contractors' Association of the United States will hold its annual convention at the Hotel McAlpin, New York, July 18-22. Secretary, G. W. Duffield, 41 Martin Building, Utica, N. Y.

**The Gleason-Tiebout Glass Company, formerly located at 71 West Twenty-third street, has moved to more spacious quarters at 200 Fifth avenue, New York. This firm is the manufacturer of "Celestialite," which permits, it is said, the perfect matching of colors and which is used in many of the new department stores throughout the country.

**P. S. Van Blum, architect, 527 Fifth avenue, New York City, is preparing the plans and will have entire charge of the development at Rosebank, S. I., for the Donald Estate. The project will include the construction of streets, with concrete sidewalks and curbs and the erection of at least ten frame dwellings costing from \$4,000 to \$5,000 each.

**Merritt Harrison, architect, has recently opened offices in the Board of Trade Building, Indianapolis, Ind., and desires catalogues and samples from manufacturers and jobbers interested in the building trades.

CONCERNING PLUMBING FIXTURES

When the home builder contemplates the estimates which the contractor presents to him as the necessary cost of the home which he hopes to build, the plumbing bid is perhaps the greatest mystery. He can understand the carpenter's bill. He thinks he knows a good piece of timber from one full of knots, and he knows something about good workmanship. He may refuse the lowest bid and he knows why he does it. But when it comes to the plumbing, what does the uninitiated know? When estimates differ widely,— "it is a different class of goods," he is told, or, "it requires a more expensive installation." He can only hope that the most expensive is the best.

Plumbing fixtures are manufactured from vastly different materials, with a wide differ-

ence in cost, each with definite qualities, and with definite advantages. There are many especial patents on the valves and peculiarities of the fixtures which add to the cost. The models which are widely used, because of the immense number made from the same pattern, are cheaper,—out of all proportion to the difference of construction,—from models less widely used and not manufactured in such quantities.

When you are selecting plumbing fixtures you are shown "enameled" fixtures at a very moderate cost, then you are shown "porcelain enameled" fixtures at a much higher price. They are better looking, and the fittings are perhaps heavier and better designed and finished. They are better grade fixtures you are told, which accounts for the difference

in price. Then you are shown specially high grade fixtures of "vitreous china" at a still higher price, which are certainly beautiful in their modeling and finish. Any housekeeper knows the difference between enameled ware, porcelain, and china when she is buying dishes, and she buys accordingly. She understands readily why a large platter or covered vegetable dish or fine china is so expensive, while an "enameled ware" dish is not.

"Enameled" fixtures are made of cast iron, the exposed surface is heavily enameled, and the enamel is fired to give as fine a finish as is possible where the surface is not an intrinsic part of the constructive material. The plumber does not consider this a "perfect" material for his goods, so he has devised the "higher grade" fixtures. It is possible, we are told, though an instance has never come to our attention, yet it is possible under unnecessarily hard usage that the enamel finish may be chipped off and the iron underneath allowed to rust. It is also possible that by the use of powerful acids in cleaning the fixtures, that the surface of the enamel may be made rough and so defeat its intended purpose as a highly polished surface which will not hold dirt. If you put your hand under the rim of such a lavatory you will feel the rough surface of the iron. As a matter of fact, even under most severe tests these enameled iron fixtures have proven extremely satisfactory. Each piece generally carries a guarantee, which while it does not repay the cost of resetting, shows that the manufacturer stands ready to back his goods.

When economy is not an especial matter of consideration, the higher grade of fixtures make a beautiful bath room. In a house where fine china and solid silver are always in use for the family service, vitreous china fixtures in the bath room will be in keeping with the rest of the house.

Porcelain enameled fixtures, as the name implies, are made of porcelain like a great dish, and the surface enameled and fired in the kiln, where the enamel and the porcelain combine under the heat.

Vitreous chinaware is made from a finer grade of materials than porcelain, and is heated to a very much higher temperature in the kiln, giving it the vitreous qualities, and also giving it a most remarkable amount of strength. As a test, fixtures of vitreous china, and also of porcelain, have been hammered with metal pipe until the pipe bent without showing the slightest damage to the fixture or to its surface. Such fixtures are necessarily expensive, and, if one can afford them, worth all the money they cost.

The plumbing in a house cannot be entirely satisfactory unless the fittings are first class. The supply and waste pipe should be ample, and of sufficient weight. The design of the valves and fittings are worth looking to carefully. A faucet which soon becomes leaky is very annoying. The mechanism by which the water is kept in the lavatory and the arrangement of the overflow are of especial importance. The most unsanitary thing in the usual bath room is the overflow basin back of the ordinary lavatory, with the open-

ings so small that it is impossible to clean it in any way. A device which is very new arranges for flushing the overflow, by forcing back the stream of water. Some types of the idea waste seem to provide a simpler solution by arranging for the overflow within the pipes themselves and allowing the cylinder which shuts off the water to be entirely removed. The extreme simplicity of this fitting is its greatest merit. There is no plug in the basin to be inadvertently removed at the wrong time, and the unsanitary small openings into the waste basin are entirely omitted. This is a matter to be considered in the selection of fixtures.

The design of the faucet is another important feature. Do you know the satisfaction of a faucet which will not leak? Half a dozen trips of a plumber to fix a leaky faucet would pay for the most expensive type that is made, so a cheap faucet is not an economy.

The many types of closets on the market have gradually been growing simpler in construction and eliminating the defects of the earlier types. The noisy flushing valve, or rather the noise of the refill, has been largely eliminated. In the latest type the tank has been done away with entirely, by the substitution of a larger supply pipe and a new flushing valve, which if desired, may be set out of sight. Some authorities say that an inch supply pipe will give a proper flush, whereas a half-inch supply is used with a tank closet, while other authorities say, "Do not allow yourself to be persuaded to use less than an inch and a quarter supply pipe." This closet is so new to the market that we are not able to find a bath room photograph with this type installed.

The complete bath room has the simplest type of fixtures. The tub is set in a tiled niche and with a shower fixture and curtain makes a complete shower equipment. The fixtures are set in the wall of the cabinet at the end of the tub, so that while the tub is completely tiled in, the fixtures are in an open construction. Cleaning around and behind the tub, and keeping it clean has always been one of the bugbears of the housekeeper. The newer tubs get away from this difficulty in a number of ways. They are made to set directly on the floor, sometimes before the tile floor is laid, some standing eighteen instead of twenty-two inches from the floor.

Tile is a satisfactory material for floors and walls in a bath room. Some non-porous wall surface is necessary where a shower is installed, and a wainscot of such material is certainly desirable. This may be of tile, marble, vitralite or only a hard cement painted in white enamel. The wall above the wainscot may be canvassed and painted or finished with a decoration in oil colors, or it may be finished with some of the glazed papers or wall coverings on the market.

In a certain sense the bath room is the key to the house. Here the homebuilder and his family plan for their own convenience, comfort, and even a moderate luxury, yet knowing that they are adding actual value to their home. If they ever wish to sell a

most important question is, "What kind of plumbing have you installed?"—"Keith's Magazine."

NIGHT REPAIRS BEST.

The happy results obtained through not inconveniencing tenants in making repairs after hours is the subject of an article in a recent issue of "Building Management."

The writer says:

"If there is one thing that the building manager wishes to avoid, particularly in the large office structures where there are a number of tenants, it is the undue, unwarranted or uncalled-for interference with their routine of business. If any annoyance or inconvenience to the tenant, by reason of faulty or negligent service, or for other causes of any nature or description, can be traced back to the jurisdiction of the building manager, his chances for successful operation of the building are materially diminished, and he loses not only the respect of the tenant, but also the confidence of his employer.

"Practically every detail of the mechanical operation of a building can be taken care of after closing hours. The cleaning, inspection and repairing of boilers and engines and all incidentals thereto; also of plumbing, electrical fixtures, steam heat, ventilation and power plants, painting and partitioning, and all matters directly affecting offices can be relegated to the night.

"Repairing elevators is another important consideration. The advantages of after hours work are many. The passenger traffic in the average skyscraper is enormous, and placing even one car out of commission for a day may interfere seriously with service. Cleaning cars at night is invariably an inspection at the same time, and a great many minor defects or breaks may be remedied immediately. There is as a consequence no delay and no necessity for hoisting the 'not running' sign. The posting of this sign is another development which the manager seeks to avoid."

CONTEMPLATED CONSTRUCTION; ARCHITECTS AND OWNERS; COST LIMIT; LAST DAYS FOR FILING BIDS; FIRMS FIGURING; CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED; ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

Residence, Cliveden street and Wissahickon avenue, Philadelphia. Architect, L. V. Boyd, Harrison Building, Philadelphia. Owner, John A. Seeds, Upsal street and W. Wissahickon avenue. Brick, 2½ stories, 30x65 feet, slate roof, hot water heating, electric lighting, hardwood floors, tile work. Architect taking bids, due July 19th. The following are figuring: Stokes Bros., 6723 Musgrave street; Charles Johnson, 5701 Boyer street; I. A. Dunkelberger, 71 E. Herman street; Wm. J. Gruhler & Co., 219 E. High street; F. B. Davis, 240 North Sixteenth street; Joseph H. Maguire, Wayne, Pa.

Residence and Garage, Akron, north of Wakeling street. Architects, Lachman & Murphy, Witherspoon Building, Philadelphia. Owner, J. A. Edgar, 4641 Penn street, Philadelphia. Brick and plaster, 2½ stories, 27x50 feet, slate roof, hot water heating, oak floors, tile work, electric lighting. Architects have received bids.

Factory Buildings, Third and Poplar streets, Philadelphia. Architect, Wm. C. Furber, 416 Walnut street, Philadelphia. Owners, Espoir Realty Co. (Henry B. Pancoast Co.), 243 S. Third street, Philadelphia. Brick (concrete floors), machine shop, 1 story, 45x125 feet; storehouse, 1 story, 45x75 feet; office building, 2 stories, 44x47 feet, slag roofs, steam heating, electric lighting, re doors. Plans about completed. Architect will take bids in one week.

Storage Building, 20 S. Delaware avenue, Philadelphia, \$20,000. Architect, private plans. Owners, Baugh & Sons, on premises. Brick, 1 story, 172x137 feet, slag roof, electric lighting. Owners are taking bids.

Residence, Chestnut Hill, Philadelphia. Architects, E. J. Holmes & Co. and C. Wharton Churchman, 1525 Locust street, Philadelphia. Owner, Edward Swain, Pennsylvania Building, Philadelphia. Stone, 2½ stories, 28x52 feet, shingle roof, oak floors, tile work, electric lighting (heating reserved). Architects taking bids, due July 24th. The following are figuring: James B. Flounders, 1329 Arch st.; Frank G. Stewart, 1619 Sansom street; Stokes Bros., 6723 Musgrave street; and Alfred James, Bala, Pa.

Store and Warehouse, 136 North Tenth st., Philadelphia. Architects, Milligan & Pierson, 520 Walnut street. Owner, A. H. Mershon, Land Title Building, Philadelphia. Brick, 3 stories, 20x112 feet, slag roof, fire doors, tile work, electric lighting, steam heating. Owner taking bids. Thomas C. Trafford, 1613 Sansom street, is figuring.

Club House (alts.), 1619 and 1621 South street, Philadelphia. Architect, H. E. De Hoff, 48 South Sixty-first street, Philadelphia. Owners, O. V. Catto Lodge No. 20, I. B. P. O. E. W., care Dr. Preston M. Edwards, 3957 Warren street, Philadelphia. Slag roof, metal lath, electric lighting, tile and marble work (heating reserved). Owners taking new bids, due July 18th. Smith-Hardican Co., 1606 Cherry street, is figuring.

Store and Apartments (alts. and add.), southeast corner Sixtieth and Arch streets. Architect, H. E. de Hoff, 48 South Sixty-first street. Owner, C. F. Tinnermann, 51 North Sixtieth street, Philadelphia. Brick, 3 stories, tile work, metal lath, electric lighting (heating, plumbing and roofing reserved). Owner taking bids, due July 19th. In addition to

those previously reported, Smith-Hardican Co., 1606 Cherry street, is figuring.

Department Store (alts.), Eighth, Ninth and Market streets, \$150,000. Architects, Graham-Burnham & Co., Railway Exchange Building, Chicago. Owners, Gimbel Brothers, on premises. Work will consist of interior changes including new fireproof dividing walls and partitions. Plans in progress. Architects will take bids in about two weeks.

Factory (add.), Nineteenth and Allegheny avenue, \$300,000. Architects, Wm. Steele & Sons Co., 1600 Arch street. Owners, Electric Storage Battery Co., on premises. Reinforced concrete and brick, 7 stories, 115x117 feet, slag roof, waterproofing, hollow tile, steel sash, safety treads, metal clad fire doors, elevators. Builders Wm. Steele & Sons Co., 1600 Arch street, taking sub-bids.

Telephone Exchange (alt. and add.), Fifty-fourth and Woodland avenue. Architect, John T. Windrim, Commonwealth Building, Philadelphia. Owners, Bell Telephone Co., Seventeenth and Arch streets. Consists of interior alterations, marble and tile work, hollow metal doors, steel sash, fire doors, cement work, reinforced concrete, extension of second floor. Architect taking bids, due July 21st, at 10 A. M. H. H. Burrell, 206 South Quince street; H. E. Baton, Twelfth and Sansom sts.; F. L. Hoover & Sons Co., 1023 Cherry street, Philadelphia, are figuring.

Blower House, Seventh and Lehigh avenue, Philadelphia. Architects, Ballinger & Perrot, 1700 Arch street, Philadelphia. Owners, Hardwick & Magee, on premises. Brick, 1 story, for air washer. Architects taking bids, due July 20th. The following are figuring: H. E. Baton, Twelfth and Sansom streets; P. Hainbach Sont. Co., Twenty-sixth and Thompson streets; Loos & Dothard, Commercial Trust Building; Pomeroy Const. Co., F. B. Davis, 240 North Sixteenth street; R. C. Ballinger, 218 North Thirteenth street.

Garage, Fifteenth and Courtland streets, Philadelphia. Owners, Strawbridge & Clothier, Eighth and Market streets, Philadelphia. Brick and steel, 1 story, 100x200 feet, slag roof, steam heating, electric lighting, gasoline pumps and storage system. Plans about completed. Architect will take bids in a few days.

Church, Fifty-first and Spruce streets, Philadelphia, \$100,000. Architect, Walter H. Thomas, 130 South Fifteenth street, Philadelphia. Owners, Chapel of the Mediator, care Geo. W. Jacobs, 1624 Chestnut street, Philadelphia. Stone, 2 stories, 60x160 feet, asbestos roof, steam heating, electric lighting, roof ventilators, waterproofing, oak floors. Architect taking bids, due July 19th. The following are figuring: F. L. Hoover & Sons, 1023 Cherry street; James H. Wells, Heed Building; H. H. Burrell, 206 South Quince st.; Frank C. Stewart, 1619 Sansom st.; Thomas C. Trafford, 1613 Sansom street; F. E. Wallace, 1220 Chancellor street; Metzger & Fisher, Denckla Building; Thomas Little & Sons, 1713 Moravian street; Abel Bottoms & Sons Co., 3611 Walnut street.

Factory (add.), 307-11 Florist street, Philadelphia. Architect, Frank E. Hahn, 1112 Chestnut street, Philadelphia. Owners, Jos. Kopperman & Sons, on premises. Brick, 2 stories, 62x22 feet and 32x12 feet, slag or composition roof, ventilators, concrete work. Architect has received bids.

Garage and Workroom (alt. and add.), Thirty-second and Chestnut street. Architect, private plans. Owners, Drexel Institute, on premises. Slag roof, hot water heating, iron stairs. Owners have received bids.

School (alts. and add.) (Gymnasium), Chestnut Hill, Pa. Architects, Stewardson & Page, 316 Walnut street, Philadelphia. Owners, Springside School, Chestnut Hill, Philadelphia. Stone, slate roof, wood, concrete and canvas floors, cement work, heating extension. Architects have received bids.

Residence (alt. and add.) and Garage, 3405 Powelton avenue. Architect, Addison H. Savery, Stephen Girard Building, Philadelphia. Owner, Theodore J. Lewis, Morris Building, Philadelphia. Brick and terra cotta, 3 stories; garage, 2 stories, 37x28 feet, slate roofs, tile work, metal lath (heating, plumbing, electric work, gasoline storage system reserved). Architect taking bids, due July 20th. The following are figuring: R. C. Ballinger & Co., 216 North Thirteenth street; A. L. Fetz & Sons, 1220 Chancellor street; H. H. Burrell, 206 South Quince street; Samuel Harting, 20 E. Johnson street; I. A. Dunkelberger, 71 E. Herman street; Havens & Co., 845 North Nineteenth street.

Garage, rear of Ninth and Girard avenue, Philadelphia. Architect, private plans. Owners, Swift & Co., Ninth and Girard avenue, Philadelphia. Brick, steel and corrugated iron, 1 story, 30x36 feet, corrugated iron roof, roof ventilators. Owners taking bids. Hogg Construction Co., 1634 Sansom street, is figuring.

Garage, Atlantic street, west of Nineteenth street. Architect, Newbauer & Boyd, 1118 Chestnut street, Philadelphia. Owner, Emanuel Weil, 211 North Third street, Philadelphia. Brick, 1 story, 108x140 feet, slag roof, electric lighting. Architects taking bids. The following are figuring: Bailey-Lush Co., 201 N. Broad street; Geo. A. Boyd, 5012 Schuyler street; F. A. Havens & Co., 845 North Nineteenth street; F. E. Wallace, 1220 Chancellor street; H. P. Schneider, 3713 Old York road; Lam Building Co., 1001 Wood street; Freund-Siedenbach Co., Bulletin Building, and H. W. Greene, 990 North Marshall street.

Factory, 424 Fairmount avenue, Philadelphia, \$12,000. Architect, private plans. Owners, Wampole & Co., on premises. Brick, fireproof, 3 stories, 23x90 feet, slag roof. Stewart Bros., 2526 North Orkney street, have the contract.

Residence, St. Martins, Philadelphia, \$20,000. Architects, Duhring, Okie & Ziegler, Bailey Building, Philadelphia. Owner, Edward Clark, 3d, Cherokee and Moreland avenues. Stone, 2½ stories, 84x30 feet, slate roof, hot water heating, electric lighting, tile work, hardwood floors. Plans in progress. Architects will take bids August 1st.

Residence, St. Martins, Philadelphia, \$15,000. Architects, Duhring, Okie & Ziegler, Bailey Building, Philadelphia. Owner, Charles P. Fox, 2102 Pine street, Philadelphia. Stone, 2½ stories, 70x32 feet, shingle roof, hot water heating, electric lighting, tile work, hardwood floors. Plans about completed. Architects will take bids in one week.

Church (add.), St. Marks street and Woodland avenue. Architects, Duhring, Okie & Ziegler, Bailey Building, Philadelphia. Owners, St. Monica's P. E. Church, Rev. Richard Bright, 2135 South Fifty-eighth street, Phila-

delphia. Consists of an additional story, stone, 60x40 feet, slag roof, steam heating, electric lighting. Plans in progress. Architects will take bids in two weeks.

Service Building 1320 to 1324 Wood street, Philadelphia. Architect, Albert Kahn, Detroit, Mich. Owners, Packard Motor Car Co., 317 North Broad street, Philadelphia. Brick, terra cotta, concrete and steel, fireproof, 8 stories, 49x69 feet, slag roof, steam heating, electric lighting, metal sash, elevator. Plans in progress.

Arsenal Buildings, Frankford, Philadelphia. Architect, private plans. Owners, U. S. Government, Lieutenant Geo. Montgomery, Frankford Arsenal, Philadelphia. Consists of 3 brick, concrete and hollow tile buildings, 2 tunnels; garage, 1 story, 115x52 feet; storehouse, 2 stories, 126x54 feet; shop building, 3 stories, 115x49 feet, wing 34x46 feet, tunnel 43x8 feet, tunnel 49x12 feet, slate and cement tile roof, waterproofing, steel sash, roof ventilators, kalamein doors, elevator, safety treads. Owners taking bids, due August 1st, at 2 P. M. In addition to those previously reported, P. J. Hurley, 1233 Cherry street; F. W. Van Loon, Denekla Building, and James Connor, 1317 Arch street, are figuring.

Office Building, Thirty-third and Arch sts., Philadelphia. Architects, Ballinger & Perrot, 1700 Arch street, Philadelphia. Owner, E. H. Harris, 2300 Chestnut street, Philadelphia. Lessees, Adams Express Company, Seventeenth and Market streets. Brick, concrete and steel, 6 stories, 200x92 feet. Plans in progress. Too early for details.

Store (alt. and add.), southeast corner Sixtieth and Arch streets, Philadelphia. Architect, private plans. Owner, C. F. Tinnerman,

51 North Sixtieth street, Philadelphia. Brick, 2 stories, consists of interior and exterior alterations. Owner atking bids. J. P. Fallon, 449 South Sixtieth street, and J. D. Fisher, 5713 Market street, are figuring.

Fraternity House, 211 South Thirty-seventh street, Philadelphia. Architects, Schouringer, Hindenach & Wenner, 631 Olney avenue. Owners, Theta Chi Fraternity, 3459 Walnut street, Philadelphia. Brick, stone and terra cotta trimmings, 4 stories, 25x90 feet, slate and tin roof, steam heating, electric lighting, tile work, oak floors. Architects have received bids.

Storage Building, Morris street wharf, Philadelphia, \$20,000. Architect, private plans. Owners, Baugh & Sons Co., 20 South Delaware avenue, Philadelphia. Brick and steel, 1 story, 137x172 feet. Owners taking bids. Graham-Campion Co., Heed Building, are figuring.

Church (alt. to Dance Hall), northeast corner of Franklin and Columbia avenue. Architect, Herman H. Kline, Sixth and Mifflin streets, Philadelphia. Owners, Keel & Abel, 1635 North Marshall street. Consists of interior alterations, hot water heating, maple flooring, electric lighting, marble stairways, electric clock tower, 6 feet in diameter. Plans completed. Architect ready for bids.

Church, Tenth street and Northeast Boulevard, Philadelphia. Architects, Ralph B. Beneker and Price & McLanahan, Bellevue Court Building, Philadelphia. Owners, First Christian Church, Rev. Irving S. Chenoweth, 1418 Euclid street, Philadelphia. Stone, 1 story, 124x54 feet, slate roof, steam heating, electric lighting, metal lath, maple floors, waterproofing. Revised plans in progress.

Owners, Orthodox Street M. E. Church, Rev. J. T. Swindells, 2236 Orthodox street, Philadelphia. Stone, 1 and 2 stories, 99x68 feet, slate roof, steam heating. Contract awarded to George Bond, Thirteenth street and Sixty-sixth avenue, Oak Lane, Philadelphia.

Theatre (alts.), Market street, near Fifty-ninth street, Philadelphia. Architects, The Hoffman Co., Finance Building, Philadelphia. Owners, the Coliseum Theatre, on premises. Consists of new maruec and interior alterations, metal lath, steam heating, marble work, waterproofing. Contract awarded to Ketcham & McQuade, 1029 Brown street.

Store Building, 1830-32 Market street, Philadelphia. Architects, Henon & Boyle, 10 South Eighteenth street, Philadelphia. Agents for owner, Mastbaum Bros. & Fleischer, 1424 South Penn Square, Philadelphia. Brick and terra cotta, 2 stories, 40x176 feet, slag roof, gum wood floors, metal lath, fire doors, roof ventilators, metal frames, kalamein doors, dampproofing (heating, plumbing and electric work separate bids). Contract awarded to Stacy Reeves & Sons Co., 2011 Market street.

Department Store (alts.), Eighth and Market streets, \$2,500. Architect, Frank Seeburger, Pennsylvania Building, Philadelphia. Owners, Strawbridge & Clothier, on premises. Consists of new metal sash, iron shutters and skylights. Contract awarded to Stacy Reeves & Sons, 2011 Market street.

GYPSUM TILE ROOFS.

Not long ago the New York "Record and Guide" showed a building roofed with cement tile. In a recent number was shown a picture of a gypsum tiled roof. The picture shows the roof of the gymnasium of the Y. M. C. A. at Racine, Wis. The remarkable feature about this picture is that it shows the gypsum tile laid on "I" iron purlins, spaced thirty inches on center. The excellent light diffusing power of this type of roof may be imagined when it is stated that the picture was taken without flash or artificial lighting of any kind.

The manufacturers of this type of roof state that gypsum tile can be laid on any roof regardless of its slope. They have been installed on a variety of buildings using many kinds of roof coverings. The weight of this form of roofing is about thirteen pounds to the foot. Owners and architects who have specified this type of roofing say that it is non-condensing, non-corroding, fire resistive, light in weight, per mts of rapid erection and at low cost.

If you've got a specialty that will commend itself to builders, make a contract for space and start right in and talk about that specialty. Dwell on its good points, point out its advantages over similar devices, set forth its dominant qualities. And keep right on, week after week talking about it. If you don't book orders we'll bet you a big red pippin that there is either something better on the market or your specialty isn't worth a kopeck noway.

The finest automobile will not run when the tank is empty, and the finest space can not pull unless it is filled with copy that grips interest.—"Printer's Ink."

Contracts Awarded

Scope of Contract and Successful Bidders; "Inside" Information for the Material Man and Interior and Exterior Fitter.

Factory Buildings, 216-18 South Third st., Philadelphia, \$14,000. Architect, Herman H. Kline, Sixth and Mifflin streets, Philadelphia. Owners, Pestcoe Bros. & Co., on premises. Brick, 4 stories, asphalt roof, steam heating, electric lighting, fire tower, stel sash, fire doors, electric elevator. Contract awarded to A. Shestack, 528 Reed street, Philadelphia.

Factory and Warehouse (alt. and add.), 218-220 Race street. Architect, private plans. Owner, Rushtom Marot, 212 Race street, Philadelphia. Brick, 4 stories, 26x104 feet, slag roof, reinforced concrete floors, metal sash, re doors, freight elevator (heating and electric work reserved). Contract awarded to W. Beaumont, St. Girard Building, Philadelphia.

Store and Loft Building, 1611 to 1615 Vine street, Philadelphia. Architect, Frank E. Hahn, 1112 Chestnut street, Philadelphia. Owner, Clarence L. Marks, 6801 N. Twelfth street, Philadelphia. Reinforced concrete and brick, 3 stories, 54x125 feet, slag roof, steam heating, electric lighting, maple floors, tile work, metal lath, roof ventilators, fire doors, safety treads, steel sash. Contract awarded to McCloskey & Bahls, Hale Building, Philadelphia.

Residence (alts.), School lane and Wissahickon avenue. Architect, Addison H. Savery, St. Girard Building, Philadelphia. Owner, Frederick H. Strawbridge, on premises. Includes new terraces, porches, stone walls, etc., promenade tile floors. Contract awarded to R. C. Ballinger & Co., 218 North Thirteenth street.

Church, Sixty-third and Malvern streets, Philadelphia. Architects, Sheen & Gill, 450

North Wilton street, Philadelphia. Owners, Overbrook Baptist Church, Rev. David K. Wood, 1618 North Robinson street, Philadelphia. Stone, 1 story, 32x50 feet, slag roof, steam heating, electric lighting, roof ventilators. Contract awarded to Thos. C. Trafford, 1613 Sansom street.

Bank and Office Building, corner Thirteenth and Market streets, Philadelphia. Architect, Alfred C. Bosson, 366 Fifth avenue, New York City. Owners, Colonial Trust Co., on premises. Brick, stone, terra cotta, concrete and steel, 13 stories, 342x100 feet, slag, tile, asbestos and asphalt roof, steam heating, electric lighting, metal lath, safety treads, tile and marble work, metal sash, kalamein doors, (3) electric elevators. Contract awarded to Warren, Moore & Co., Commercial Trust Building.

Power House, American and Somerset sts., Philadelphia. Architect, W. E. S. Dyer, Land Title Building, Philadelphia. Owners, Haffleigh & Co., on premises. Reinforced concrete and brick, 1 story, 45x70 feet, slag roof, concrete floors, ventilators, metal sash, fire doors. Contract awarded to Harry Brocklehurst, 512 W. Norris street.

Store Building, 1226 Race street, Philadelphia. Architects, Charles E. Oelschlager, Harrison Building, Philadelphia. Owner, name withheld. Washed Bar Sand and Gravel will take less cement on concrete work. We know how.
DAVID FRANCE CO., Tasker Street Wharf, Delaware River, Philadelphia.

Riches can secure no better illuminant than Electric Light for the mansion, yet our rates are so low that every home—even the most modest—can afford it. Electric Light is the brightest, cleanest, most convenient and hygienic light, as well as the most economical.

If your house is not wired for Electricity, ask us for the details of our deferred payment housewiring plan.

Engineering and the Building Trades

PHILADELPHIA

Number 30

July 26, 1916

As The Editor Sees It

A Philadelphia Zoning Commission.

AMONG the acts passed by the last session of the Pennsylvania Legislature was one which authorized the Park Commission of any city of the first class to make regulations as to "the location, size and use of buildings, any portion of which shall come within 200 feet of any park, parkway, playground or other public place under its care or management."

Little attention was given to the act by builders, the general opinion, at the time of its passage, being that it was intended solely to protect park property against the depreciating intrusion of undesirable industries and was without reference to building conditions generally.

That the measure is not nearly so innocuous, as it has been regarded, is shown by a resolution adopted at a recent meeting of councils. This resolution authorizes Mayor Smith to appoint a commission to consist of the Directors of the Department of Public Works, the Director of the Department of Public Safety, the Director of the Department of Health and Charities, the President of the Park Commission, a member of the Board of Surveyors, a member of the Art Jury and one representative of each of the following bodies:

The Committee on Comprehensive Plans, Philadelphia.

The Philadelphia Real Estate Board.

The Philadelphia Operative Builders' Association.

The Philadelphia Chapter of the American Institute of Architects.

The Philadelphia Housing Commission.

The Philadelphia Chamber of Commerce.

The commission thus constituted is to make a survey of the city, taking into account all parks, parkways, playgrounds, "or other public places," and is to make a report covering recommenda-

tions as to the creation of zones within which it will be sought to impose restrictions as to height, character, size and use of buildings in accordance with the Act of May 11, 1915.

* * *

A Housing Expert's Views.

BERNARD NEWMAN, of the Housing Commission, is of opinion that the commission to be named by the Mayor will not only firmly establish the zone system as applied to Philadelphia, but will make it obligatory on builders to provide side yards to all new houses erected in the outlying sections.

Considerable comment has been occasioned by the failure of Councils to provide for a representative on the Commission of the Philadelphia Master Builders' Exchange.

As a thoroughly representative organization, the Exchange should have been among the first invited to name one of its members to act in the framing of any new code having to do with building.

The GUIDE is advised that the omission of the Exchange was an oversight and that Councils will be asked to agree to an amendment under which the Exchange will be asked to name a representative.

* * *

The Public Building Game.

HOW Congress handles the subject of the placing of public buildings throughout the country is pretty generally understood, thanks to the publicity given congressional methods from time to time by architectural and build-trade magazines. Seldom, we think, has the case been so succinctly stated as in a recent number of the *Saturday evening Post*. Under the caption "A Modest Proposal," the *Post* observes:

"The *Journal of the American Institute of Architects* publishes a list of the

public-building bills that have been introduced in the present Congress. They number more than seven hundred and would involve an expenditure of a hundred million dollars. The general plan upon which these bills are dealt with is probably well enough understood."

"Approximately speaking, round sums of money, ranging from fifty thousand to one million dollars, are written on seven hundred slips of paper, which are then put in a bag and shaken up. Each member of the major party in Congress draws two slips and each member of the minority draws one. Members write down the names of towns on their slips, and the slips are then incorporated in a public-building bill, for which everybody votes."

"The actual practice may differ somewhat from the above in detail, but the net result is about the same. Public buildings go where they are not needed and do not go where they are needed. A simple lottery would be nearly as good as the method actually employed. There is no intelligent, comprehensive plan for the erection of public buildings. None of the parties, in its national platform, so much as hints that the pork-barrel, log-rolling scheme should be abandoned or amended."

And the game goes on.

* * *

Experts Disagree on Zoning.

THAT the new Philadelphia Zoning Commission is to find its work no bed of roses is shown by developments in New York City, where the zoning idea has been for some time past the principal theme of discussion among builders, architects and realty men.

Sig. Cedarstrom, real estate expert for the Public Service Commission and a member of the Real Estate Board, is having a merry controversy with George T. Mortimer, president of the Equitable Building Company, over the probable ef-

**DRAWING
MATERIALS**

CHARLES H. ROBBINS, JR.
125 S. 11th Street, Philadelphia
BELL PHONE, WALNUT 1086
KEYSTONE PHONE, MAIN 497

**BLUE
PRINTS**

fect the proposed zoning plan and building height limitation will have on property values.

Mr. Cederstrom says that zoning and height limiting will destroy realty values and will plunge the city almost into bankruptcy. Mr. Mortimer says it will do no such thing, but on the contrary will help and harden realty values.

The controversy started with a letter from Mr. Cederstrom to the Board of Estimate protesting against the zoning plan, in which he said in part:

"The adoption of the final report of the Commission on Building Districts and Restrictions will have for an immediate effect an enormous decrease of taxable land values throughout the city, resulting in a serious reduction and impairment of the city's borrowing capacity and its debt limit, followed by an increased prohibitive tax rate which will necessarily compel the city to at once find new sources of revenue."

* * *

Probability of Damage Suits.

IN addition, the restrictive uses and other conditions which would be imposed on real estate would create an absolutely definite and concrete basis for the successful institution of innumerable damage suits against the city by owners of real estate for actual injury suffered, whereby millions may be recovered as liquidated damages for the diminution of real estate values and future use imposed by the city.

"The ultimate result would be that chaotic conditions would follow with reference to city finances and real estate ownership.

"The Department of Taxes and Assessments when computing the valuations for purposes of taxation on ordinary real estate adopts methods whereby the highest possible value may be given to each separate assessed parcel of real estate, considering it as a whole in one ownership.

"The fundamental basis for its methods is primarily that all ordinary real estate (land and improvements) for purposes of taxation is in fee simple ownership and as such is unrestricted as to its use, and being unrestricted, the land is capable of being utilized to its fullest extent for residential, commercial or other purposes, taking all the potential features into consideration.

"The adoption by the Board of Estimate and Apportionment of the districting resolution as submitted, would of itself necessitate a complete change in the fundamental basis of the valuation of ordinary real estate for purposes of taxation. The courts certainly would not permit the city to impose restrictions and then ignore them in its valuation for taxation purposes.

Viewpoint of the Owner.

REAL estate located in the various boroughs of the city of New York, consisting of over 500,000 separately assessed parcels of real estate on the tax books, totally about \$8,000,000,000, are owned in fee simple, the few parcels that have been purchased or are otherwise negligible.

"The owners of these various properties have a perfect right to assume that the ownership of real estate in fee simple carries with it a legal right to utilize their individual properties as they see fit and in such manner as will best suit their purpose, be it residential, investment, speculation for building purposes or otherwise, or a mere gamble in the future enhancement of value, or a whim to own a piece of mother earth and pay taxes to the city, subject only to a reasonable regulation in the interest of public health, under the police power of the city. Real estate values in the city of New York are predicated on this state of facts, and it is substantially the basis adopted for taxation purposes."

* * *

The Zoning Point of View.

REPLYING as spokesman for the zoning commission Mr. Mortimer says in part:

"You as a real estate expert should know that the haphazard development of this city has finally brought about such a chaotic condition in real estate values that there is no stability of any sort whatever. You know that the large majority of foreclosures go to the plaintiff. You should know that much of this condition is due to the fact that this town is woefully overbuilt in haphazard style, and further that the owner who is willing to go into a decent development fears lest his investment be wholly or partially ruined by the subsequent act of his neighbor. You must know that most of all of our fine suburban developments have eventually been ruined by the encroachment of the multi-family house. You must know that if the entire Borough of Brooklyn was built up with apartments they would in a great degree be substantially tenantless, as there is no economic demand for such a thing.

"You must know that when an apartment is built in or on the outskirts of a good residential section it cuts down the value of every good private house within a large radius of it.

"Now as to zoning. What do you think the result would be to the valuation of your home if I should build a public garage next to it? What do you think the loss has been to Fifth avenue by permitting the erection of sweatshops either on it or near to it? Don't you know that

over half of the so-called skyscrapers in lower Manhattan have been ruined by the subsequent erection of buildings which have cut off their light and air? Don't you know that if there had been such a zoning regulation as is now proposed the disaster which has happened to the old dry-goods district south of Twenty-third street never could have happened? Don't you know that one of the important underlying factors behind the whole zoning proposition is the stabilizing of real estate values? To me it is so obvious that it merits no discussion."

* * *

Three Kinds of Convention-Goers.

IN the course of an address made on the occasion of the recent convention of the Master Plumbers and Steam Fitters at Atlantic City Judge Karel got off a clever bit on the kind of people who attend trade conventions. There are, Judge Karel remarked, three varieties of convention goers:

1. The earnest workers.
2. Those who consider the convention a clearing house for ideas, where business yarns are swapped and experiences told and—
3. Those who know little and care less and who look upon the convention simply as an outing.

The first two classes, says the Judge, derive benefit from the convention, but the third class is wasting its time so far as furthering their business interests is concerned.

* * *

The Ideal Location.

FOR long, members of the theatrical profession have complained—and with reason—of the custom theater owners have of building their theaters with imposing entrances for the public on the street, but with the stage entrances tucked away up in dark and dingy byways, says the *Saturday Evening Post*. At the conclusion of a season on the road, Ed. Wynn, the comedian, was riding through a town in Iowa when he passed the mouth of the dirtiest, shabbiest alley he had ever seen. Forgotten swill barrels lined its sides and a dead cat was ripening in the sunshine midway of its length.

Wynn stopped, got out of the 'bus, looked up the local photographer, and caused the individual to make a picture of the dismal prospect. Then he mailed a finished copy to a gentleman in New York who owns a string of theaters over the country, with the following suggestion written on the margin:

"You are overlooking a bet. What a lovely alley to build a theater alongside of!"

EDITORIAL NOTES.

The National Association of Master Steam and Hot Water Fitters are considering a proposal to change the name of the association to one more in keeping with the technical demands of the craft. Some such substitute as "The National Association of Heating Contractors" is suggested.

* * *

Some town is little old Philadelphia, even if the paragraphers do persist in poking fun at it and referring to it as "slow." At a recent meeting councils passed a budget of \$26,241,463 for municipal improvements, parcelled as follows:

Grading, \$250,000; paving and repaving, \$500,000; bridges, \$745,000; main sewers, \$1,000,000; branch sewers, \$1,000,000; Bigler and Packer street, \$500,000; country roads, \$250,000; Parkway, \$9,000,000; workmen's compensation, \$250,000; mandamus, \$300,000; improvements at Byberry, \$2,300,000; opening streets, widening, changing grades, \$4,925,900; maintenance and deficiencies, \$4,970,563. Total, \$26,241,463.

* * *

Pretty good for "a sleepy village," don't you think?

* * *

If you are not a regular subscriber to the GUIDE you are not keeping in complete touch with the doings of the live wires in your line. And the man in business to-day who allows himself to get out of touch with what is going on in his own line is headed for failure. The successful man in the world of to-day knows who's who and what's what. Send in your subscription and keep in step with the band.

* * *

Don't be afraid to write to the editor when you feel you have something of value to say about a topic of current trade interest. This is *your* paper and it will be glad to find space for *your* opinions. All the good things that have happened within the past six thousands years grew out of discussion.

* * *

Rules, regulations, formulas and advanced methods are absolutely essential to-day for the manufacturer, the jobber, or the retailer, who expects to measure up in the commercial world to the standard of prevalent ideas, in fact, to the recognized standard of successful ideas; but whenever men become so efficiency-ized that they also become mere machines, mere breathing automatons as it were, then it is that the word efficiency becomes a by-word and a joke. Cram a man so full of "lost motion" ideas that you kill his initiative and he becomes

far less valuable than the kind of machine that starts with a crank and is stopped with a brake.—*The Triangle*.

* * *

The windows are the mirrors of the store, comments an English trade paper, and reflect the character of the goods. An artistic window creates a belief in high quality, excellence and style, whereas the crowded and jumbled window conveys the opposite—cheapness and inferiority. To sum up, the points to be kept in mind are: Good artistic arrangement, no overcrowding and good lighting arrangement, not forgetting terse description, and above all, truthful ticketing.

* * *

Advertising power, when applied to the bargain sale or to a special mail order proposition, or to any other quick-action event, will produce results akin to speed. But if the upbuilding of an enterprise is involved, then the power of advertising will be indicated not in the rapidity with which this result is accomplished, but in the substantial and solid character of the achievement. And when advertising has revealed its power in this wise there will be even more admiration for the results than there would be for the speedier, showier work.—*Furniture Record*.

* * *

In an interview with a merchant in a Western city recently he said: "I have been thinking a lot about my advertising copy. I am accounted a pretty good salesman—that is, when I wait upon people in my store. I talk to them about the merchandise they are seeking, its quality, the service it will give, etc. I talk to them just as I talk to you, and generally effect a sale.

"I make my advertisements a phonograph of my salesmanship talk. It strikes me that that is the way to advertise. There is nothing freakish or mysterious about advertising—it is simply putting your personal talk into printed words. The nearer you get your words to represent you as a salesman the better results your advertisements bring."

This merchant's statement is good, sound logic. It is indisputable. But only a small percentage of merchants do as he does. However, the time is coming, and it is not far distant, when retail merchants generally will adopt the same methods. When they do retail advertising will increase in efficiency.—*The Dry Goodsman*.

A retailer may fool himself by failing to charge all of his expenses into his cost of doing business, but his expenses will come out of his gross profits just the same.—*Ex*.

TO BORE HOLES IN PLATE GLASS.

It is often desirable to bore a hole through plate glass to be used as a shelf or for some other purpose in the shop, says an exchange. This has often seemed impossible to the trimmer or merchant in the smaller towns where there is no one specially prepared to do the work. Here is a simple and easy way to do it: Get a small three-cornered file and grind the points from one corner and bias from the other and set the file in a common brace for boring wood. Lay the glass you wish holes bored in on a smooth surface covered with a blanket and start the hole. You will soon make a slight impression on the glass. Around this place a disk of putty; fill this with water. This will prevent too great heating from the friction. Resume the boring, and in a few seconds you will have as clean a hole as though you were boring in wood. Use a little care, and don't apply too much pressure while you are boring, as you are liable to crack the glass. And size holes may be made in this way.

A. E. Wills and E. E. Ludwick have opened offices at 36 South Seventeenth street, Philadelphia, under the name Wills, Ludwick & Co., general contractors. Mr. Wills was associated for ten years with Henry L. Brown, contractor and builder. Mr. Ludwick was superintendent of construction for the City of Philadelphia for years and acted in a dual capacity as superintendent of construction for the American Institute of Architects and the City of Philadelphia on the restoration of Independence Square.

Advertise! The minute you stop advertising you lose ground. You may not feel this loss right away. But you must feel it in the end. Advertising is the dynamo of modern business.

There never was, never will be, a better medium for the man who has something to sell to a given class of buyers than the trade paper whose circulation is limited to that class. Newspapers with their swollen circulations strike at best but a chance target here and there. The trade paper carries your rifle fire to targets exclusively. You can't miss,—if your ammunition's right.

A hen is the only kind of a critter that can produce something by sitting down and doing nothing.—Exchange.

ACCEPT NO SUBSTITUTE CROWN-ADELPHIA

The Wonderful Little Tank Heater

Plenty of Hot water *every minute* in the day and night. Costs but a few cents' worth of coal a day. The most satisfactory as well as the most economical way of heating water. Just the thing for Summer when the range fire is out. Keeps the cellar dry also.

Washed Bar Sand and Gravel will take less cement on concrete work. We know how.
DAVID FRANCE CO., Tasker Street Wharf, Delaware River, Philadelphia.

Riches can secure no better illuminant than Electric Light for the mansion, yet our rates are so low that every home—even the most modest—can afford it. Electric Light is the brightest, cleanest, most convenient and hygienic light, as well as the most economical.

If your house is not wired for Electricity, ask us for the details of our deferred payment housewiring plan.

BUILDERS' GUIDE

Devoted to the Advancement of American Architecture, Structural
Engineering and the Building Trades

VOLUME XXXI
Number 31

PHILADELPHIA
August 2, 1916

As The Editor Sees It

Prosperity and Building Volume.

THERE is no safer gauge of the prosperity of a country than the volume of money its people are able to put into new building. The average man builds either when money is plentiful or when trade conditions are such as to make the investment look like a good gamble. To pay for the buildings projected in ninety-seven cities of the United States during one month of the present year, the month of June, would require more than \$61,000,000. This applies to new buildings only and does not take into account a sum equally as great for other forms of structural development such as bridges, new roads, underground work, railroad extensions and wharf and pier building.

According to Bradstreet's Journal new buildings planned in ninety-seven cities will cost \$61,304,209, which is a gain of 56 per cent. over June a year ago, as against a gain of 35.8 per cent. in May over the like month of 1915. Of the ninety-seven cities reporting, sixty-two show increases and thirty-five report decreases from the like month of 1915.

Among the large cities making notable gains in June were New York City (three boroughs reporting), with an increase of 140 per cent.; Philadelphia, 32.8 per cent.; Cleveland, 15.2 per cent.; Detroit, 85 per cent.; Portland, Ore., 113.7 per cent.; Chicago, 45 per cent., and Los Angeles, 4 per cent. Important cities showing decreases were Bridgeport, 33 per cent.; Rochester, 31.7 per cent.; Toledo, 21.9 per cent.; St. Louis, 31.4 per cent.; Seattle, 29 per cent., and Boston, half of 1 per cent.

Building in the second quarter of 1916 shows a very large total, \$266,163,370, as against \$193,689,520 in the first quarter, a gain of 32 per cent. for the second three months, as against an increase of 18 per cent. in the first quarter. Expen-

ditures for the half year aggregate \$459,852,890, a gain of 26 per cent. over the like period last year.

* * *

The Year in Building.

THIS year, despite the high costs of all materials and labor, partly, perhaps, because of these high prices, the expenditures for such purposes have seen all previous monthly totals surpassed, while those for the half year about equal those of 1909, the earliest year giving identical comparisons for 120 cities.

These returns point naturally to the possession of a hitherto unprecedented volume of floating capital available for transference into what might be termed a fixed form.

Returns for June are sufficiently complete to allow of a fairly good resume of the year's building activities to date, and it is safe to say that the last six months have seen a close to high record total of building expenditures.

According to the figures 138,200 permits were recorded in the first half of the year at 141 cities, a gain of 2.8 per cent. over the like period of 1915. In the same period the expenditures of the 141 cities aggregated \$470,801,820, a gain of 27.6 per cent.

Every group of cities showed gains in value of building, these ranging from an increase of 57.3 per cent. in the Northwest to only 6 per cent. in the Southwest.

The middle group, which includes New York City, gains 20 per cent. in expenditures while decreasing 4 per cent. in permits. The Southwestern and the Far Western cities also showed fewer permits, but good gains in values of work done.

An Important Decision.

AN important decision was rendered recently by Justice Greenbaum in the Supreme Court, that will undoubtedly result in the filing of a number of suits by property owners who seek to recover damages for depreciation in either the actual or rental value of their premises, because of the structures which are being built on the sidewalks by the Subway Construction Companies. Real estate owners heretofore have been very doubtful whether recovery could be had because the courts have frequently denied injunctions which were intended to restrain the erection of these various buildings, because of prospective damages to be suffered by their erection. The following synopsis of the case decided by Justice Greenbaum was prepared by the Advisory Council of Real Estate Interests for the guidance of property owners:

"The Underpinning and Foundation Company was directed by the Public Service Commission to locate a shaft in front of the premises 593 Broadway. A sub-surface structure of the conventional type was erected, which extended across Broadway and occupied a portion of the sidewalk on either side. The part of the structure located in the sidewalk was about seven feet from the abutting premises, and ample means of access thereto was at all times afforded by this space.

* * *

The Court's Views of the Facts.

THE tenant of the premises, 593 Broadway, J. Sinsheimer & Son, brought an action against the Underpinning and Foundation Company, claiming large damages for loss of profits and damage to goods and the invasion of the easements of light, air, and access to the premises. This action was tried in the New York Supreme Court before Justice Greenbaum and a jury.

**DRAWING
MATERIALS**

CHARLES H. ROBBINS, JR.
125 S. 11th Street, Philadelphia
BELL PHONE, WALNUT 1086 KEYSTONE PHONE, MAIN 497

**BLUE
PRINTS**

"They admitted that the company was in no respect negligent or wanting in skill or due care in the work of constructing and maintaining the structure in the street, and rested their case solely on the claim that said structure diminished the light, air, and access to the premises to the extent of \$15,000 during the two years and ten months in which it was in place.

"In meeting this claim the company contended that the structure was a temporary one, which could under no circumstances remain in front of the premises for longer than forty months, the time in which the contract was to be completed; that it was located there by order of the Public Service Commission under a valid legislative enactment, and was used in the construction of a work of great public benefit, and that any injury sustained by the plaintiff, as the occupant of the abutting premises, was without redress in law.

"After a trial lasting four days, Justice Greenbaum squarely took the position that the structure was in law a permanent one, and that the plaintiff was entitled to substantial damages. He in effect directed a verdict for the plaintiff, leaving it to the jury to assess the damages, which it did to the extent of \$5,500."

* * *

The Good Roads Problem.

NEW JERSEY is interested in the question of good roads. Incidentally, New Jersey is interested in getting reliable data on the subject of what constitutes a good road, whether a cheap or an expensive road is the best investment and whether vehicular traffic over its roads should be regulated and to what extent. The New Jersey Good Roads Commission is sending out to engineers, contractors and manufacturers a series of questions to which it asks each recipient to make reply, the idea being to gather expert advice by which to be guided in a campaign of road building now under consideration.

The following statement and list of questions is inclosed:

The main trunk highways of New Jersey are breaking down under the terrific strain to which they are subjected by modern traffic.

Many of the feeder roads to these trunk highways are in bad shape.

The roads running through the outlying districts of the State and connecting with these "feeders" have never been in satisfactory condition.

The construction of much needed new roads is coming to a standstill, the maintenance of old roads even at enormous expense is not keeping pace with the daily wear and tear of travel.

Transportation, which is the life blood

of civilization and prosperity, is thereby hampered and the development and improvement of New Jersey is being retarded.

* * *

What Is Road Trouble?

What is the trouble?

Does the fault lie with a tangled mass of unintelligible road laws?

Are we struggling hopelessly to administer the road laws in township, county, and State by numerous, undefined, and varied types of road organizations?

Are many of the employees of these road organizations indifferent, untrained, or inefficient?

Do these employees, elected by the people or appointed for political reasons, hold office for such short periods of time and under such conditions that they cannot become effective in their work?

Are we building and maintaining our roads by unsound or unbusinesslike measures of finance?

How much interest are we paying on bonds issued to build poor roads which have gone to pieces or will go to pieces before the bonds mature?

How much money have we saved in our funds to pay off these bonds at maturity?

Does our money go into roads or into unnecessary and wasteful charges?

Do we foolishly try to save the money by building cheap roads that will last months when we ought to practice true economy by laying down roads that will last years?

Are we getting full and honest returns on every road contract into which we enter?

Are we selecting the right materials and the proper sort of road construction and maintenance for the several diversified localities of the State?

Should we limit the traffic on highways as to the weight of vehicles and load, and, if so, what should be the limit, and should we make regulations as to the width of tires?

In a word, do we have a scientific, efficient and far-sighted road policy, capable of automatic expansion and application to meet increased growth and change of traffic conditions, or do we act only under the stress of necessity, striving to get good roads by passing an annual installment of road legislation?

* * *

Wants Answers to Questions.

The Good Roads Commission appointed to study road conditions in this State wants to find out the answers to the above questions, and to many others, which are pregnant with significance to the road situation in New Jersey.

In order to obtain the suggestions of as many people as possible in the State

this list of questions has been sent to you in the hope that you will reply frankly and fully give your ideas on the subject.

Please bear in mind that the commission is interested in every phase of the road situation, and is not committed to any preconceived ideas of road-construction, road-maintenance, road-administration, or road-finance.

It is believed, however, that there are certain fundamental principles of law, finance, administration and operation underlying this whole subject of good roads, and any help you will give by your careful thought and suggestions will greatly assist in discovering what these principles are and ultimately enable the commission to apply them to New Jersey roads.

Kindly mail all letters before August 1 to

JOHN W. HERBERT,
Chairman Commission on Road Legislation,
New Jersey State Chamber of Commerce,
15 Exchange Place, Jersey City, N. J.

STANDARDIZING ADVERTISING FOR ARCHITECTS.

The Journal of the American Institute of Architects has made a valuable suggestion regarding the standardization of advertising matter intended for preservation for architects. The Journal suggests in a widely distributed circular that the standard dimensions of letter paper, 8½x11 inches, be used wherever possible, pointing out that practically all filing cabinets are designed to accommodate this dimension, also circulars of this size may be pinned to letters and other data to which it may relate. It is also shown that drawings may be shown in larger scale on this paper and that one 8½x11 inch page will carry as much as two pages 6x9 inches, saving one half in filing space. It is also suggested that bulky covers be avoided and that circulars and pamphlets be numbered serially and dated. Architects appreciate reliable advertising matter but 90 per cent. of that received at present goes into waste baskets either because it is useless or impossible to file conveniently.

BARBER'S COT RATE.

John Purroy Mitchell, mayor of New York, and Donn Barber, the big New York architect, were up in Canada last summer, says the "Saturday Evening Post." In a small town they stopped overnight at a little hotel run by an Englishman who had not been very long in the Dominion. Mr. Mitchell registered for both and they were assigned adjoining rooms.

Next morning when the two guests went to the desk to pay their bills only one account was rendered. The hotel man handed it to the Mayor. It read:

Lodging and meals for Mr. Mitchell .. \$3.00
Ditto, ditto, for his barber 1.50

Total \$4.50

EDITORIAL NOTES.

Alba B. Johnson, President of the Baldwin Locomotive Works, was quoted recently as saying that he looked for a depression in business after the war, but that he knew many capitalists held a contrary expectation. "I am fully aware," he said, "that it is the substantial opinion of many capitalists with whom I have discussed the situation recently that the great wave of prosperity we are now enjoying will continue."

* * *

A novel idea in suburban realty selling is being tried out by a firm of New York operators. The prospective buyer leases one of its new homes at a stipulated rental for the term of three years. If at the expiration of this lease, he decides to buy, the three years rental, without deducting taxes, interest or insurance, applies on the purchase price. The firm is said to be renting as fast as it can build with every prospect of converting its tenants into buyers within the prescribed period.

* * *

The Youngstown Sheet & Tube Co. has decided on liberal provision for such of its employees as enlist for service in defense of the nation. In a letter to C. S. Robinson, second vice-president of the company, President J. A. Campbell authorizes the announcement that all unmarried employees who enlist will receive full salary up to \$75 per month and married employees will be paid in full up to \$100 per month as long as they are in military service.

* * *

At the fifth annual meeting of the Metal Branch of the National Hardware Association of the United States an ordinance was presented requiring every building "except one-story structures less than 16 feet in height of a temporary character" to be covered "with tin orterne plate, iron or steel, slate, copper or such other equally good fireproof material as the Bureau of Building Inspection may authorize." The committee which presented the ordinance urges those interested in the manufacture and sale of sheet metal and terne plates to "use every effort to secure the adoption of this statute, or of a building regulation containing similar provisions in every city and State throughout the country."

* * *

It is an interesting fact, in connection with the recent death of Hollinshead W. Taylor, of the N. & G. Taylor Company, of this city, that the art of tinning was introduced into England in 1720 by one of Mr. Taylor's ancestors, Major J. Hanbury, of the Hanbury-Tracy family at Pontypool, Wales. It was Hollinshead

W. Taylor, his brother, Nathan A. Taylor, and a cousin, Geo. D. B. Taylor, who in 1891 introduced the manufacture of tin plate into the United States, transporting the necessary equipment bodily from Wales.

* * *

Don't take anybody's patronage for granted. Your nearest neighbor of your best friend may stray away if they are not included in your business getting efforts.

* * *

Dishonest or unfair competition is mainly promoted by untrue, deceptive or misleading advertising. Fundamentally, unfair competition is dishonest advertising. It has many ramifications and many branches and forms, but traced to their source, all of them will be found to be based upon some form of untrue, deceptive or misleading publicity.

* * *

"The thing that goes the furthest in making life worth while,
"That costs the least and does the most is just a pleasant smile;
"It's full of mirth and goodness, too, with hearty kindness bent;
"It's worth a million dollars and it doesn't cost a cent."

* * *

A newspaper item announcing that some well-known mail order advertiser has been convicted and fined under a fraudulent advertising law, would be a great help towards putting the dealer right in the minds of those who have been led away from him by misleading and untruthful statements.—*National Hardware Bulletin*.

* * *

A disloyal employee is a traitor to his employer and a traitor to himself, because the success of the firm for which he is working is the success for himself, and a failure or loss surely will react upon him. Therefore, remember above everything to be loyal to your firm and the reward will surely come!

* * *

Good salesmanship is very valuable to the firm and a good salesman is always in demand. A good salesman must know when to stop talking. The salesman who knows this is a successful salesman. A good salesman knows exactly when the article he is showing is sold and he does not talk any more, but closes quickly.

* * *

The lamented sage of East Aurora said, "Smile till 9 A. M. and the rest of the day will take care of itself."

A smile costs nothing and counts big. Smile in the mirror, then smile in the mirror some more. Soon it will come naturally. A face that cannot smile is like a bud that cannot blossom, but dries up on the stalk.

\$700,000 TO BE SPENT ON ARSENAL BUILDINGS.

Arrangements are now being made for the erection of new buildings at the Frankford arsenal, Philadelphia, which will double its capacity and provide work for at least 1,000 more employees. For this work the government has appropriated \$700,000.

First steps will be taken by the construction of a general shop building, a storehouse for ammunition and a garage for motortrucks.

Bids have been invited by the government on these buildings, work on which will be in full swing by the middle of August. The construction will involve an expenditure of about \$175,000. These structures will be completed with dispatch and work then rushed on the other improvements.

That the enlargement of the arsenal plant is necessary to properly increase the government's manufacture of ammunitions, has long been contended by Lieutenant Colonel George Montgomery, the commandant, and other men familiar with the needs of the arsenal.

The other improvements include extension of the instrument building, extension of the fuse shop building, extension of the artillery case shop building, extension of the lead shop building, metal storehouse; storehouse for rifles, sewer connections, construction and repairs to roadwalks and seawall, fire protection, increasing facilities for rifle and field artillery, and five magazines for high explosives.

It will be used as printing and photographic shop, test room, etc. It will have a wing 35x47 feet; alone it will measure 116x50 feet. The storehouse will be two stories in height and of reinforced concrete. Current manufactured small arms ammunition will be stored there. The building will have an area of 126x155 feet. The garage will be 116x53 feet, and two stories in height.

Barrett Specification Roofs

Guaranteed
for
20
Years

This Twenty Year Guaranty Bond is a new and important addition to Barrett Service.

It will hereafter be given on all Barrett Specification Roofs of fifty squares or more in all towns in the United States and Canada of 25,000 population and over, and in smaller places where our inspection service is available.

All you have to do to secure the Guaranty Bond is to give the roofing contractor a copy of The Barrett Specification dated May 1, 1916, and tell him to figure on that basis. The specification of that date includes the 20 year Surety Bond provision.

Our only requirements are, that the roofing contractor shall be approved by us and the specification of the date mentioned shall be strictly followed. We know from the experience of over fifty years that such a roof will last 20 years and more without repairs of any kind.

The Surety Bond will be issued by the United States Fidelity & Guaranty Company of Baltimore, and will be furnished by us *without charge*.

Our inspector will pass upon the quality and quantity of materials and workmanship and see that the roof is laid so as to give maximum service. From the

*An Important
Addition to
Barrett Service*

buyer's standpoint this arrangement is ideal. Under the plan he is assured of having an inspector on his roof whose only interest is to make it *as good as possible*.

The principal architects, engineers and roofing contractors throughout the country are familiar with the plan and are cooperating with us.

If you wish any further information regarding the guaranty, write our nearest office and the matter will have prompt attention.

A Copy of The Barrett Specification, with roofing diagrams, free on request.

BUILDERS' GUIDE

Devoted to the Advancement of American Architecture, Structural
Engineering and the Building Trades

VOLUME XXXI
Number 32

PHILADELPHIA
August 9, 1916

As The Editor Sees It

Passing of the Skyscraper.

NEW YORK'S new building law, approved by the Board of Estimate, marks the passing of the skyscraper. The new law provides, in the business district, that no future building shall exceed in height twice the width of the street on which it faces. If the new building stands on a corner, the widest street is to be the basis of calculation. After reaching the limit of height allowed by law, based on the width of the street, the building may be carried higher only by a mansard roof or tower. But any addition above the legal height of the main building must be set back at least one foot for every four feet of added height.

For example: Broadway, Second, Third, Fourth, Fifth, Sixth, Seventh and Eighth avenues and Fourteenth, Twenty-third, Thirty-fourth, Forty-second, Fifty-ninth and One Hundred and Twenty-fifth streets are 100-foot streets. The owner of a lot fronting on any of these streets may in future build at the street line a main structure not more than 200 feet in height. A tower or other superstructure can be added only in this proportion: If the base of the tower sets 12 feet back of the building line it can be carried up 48 feet; if it sets 36 feet back it can be carried up 144 feet, and so on. Where a street in front of a building is more than 200 feet wide, no extra height of building is allowed. To front on a park gives no advantage.

The general rule as to towers is that after a building has reached its height limit, a tower equal to 25 per cent. of the area of the site may be built without limit to the height. In other words, reduce a lot to 25 per cent. of its total area and the building thereon is not limited as to height. The faces of the tower must be at least seventy-five feet from the centre of the street.

This rule so reduces towers in size

that the square foot of renting space, after provision is made for elevators, is so small that very high towers will no longer be built, because they cannot be made commercially profitable

* * *

Ten Stories to Be Standard.

AS most of the streets of New York are sixty feet in width, the height of new buildings will be limited to 120 feet in most districts. From ten to twelve stories will be the standard. Madison avenue is seventy-five feet wide. There 150-foot buildings will in future be the limit. In Park avenue 200 feet in height is the new limit.

Every age has been signalized by a distinctive architecture; the ancient world by temples, coliseums and pyramids; the Middle Ages found their expression in the great cathedrals; and New York has typified this modern age of colossal material achievement, the greatest the world has ever known, by inventing a style of architecture absolutely original, distinctively American and as useful as it is beautiful, says the "New York American."

But our present city government does not approve it. They put a perpetual ban upon the ingenuity of architects and the enterprise of builders. As to height, they mean to go backward instead of forward.

Other parts of the plan adopted by the Board of Estimate, including the districting of the city for residence and business purposes, meet with universal approval. Architects are divided and many are reticent about height regulations, but many leading ones approve it.

Of course, the limitation of the heights of buildings can be repealed by future legislatures whenever public sentiment requires it. In the meantime, the present owners of the very high buildings of to-day will have a

monopoly of the air. They will be free from competition; no neighbor will be permitted to rise to their level.

* * *

Zoning Idea Popular.

THE Zoning idea appears to have met with general favor. Edward D. Bassett, chairman of the Commission on Building Heights and Districts, says of it:

"I believe that the zoning resolution adopted by the Board of Estimate is the most important thing that has been consummated, so far as real estate is concerned, in the City of New York. Much has been said about its effect upon taxable values, but I believe that these will remain practically unchanged, though the selling values will enhance. It will take, in my opinion, about two years to reflect conditions from the tax standpoint.

"People owning detached dwellings will be glad to know that they are protected against invasions by factories, public garages and business buildings, and owners of business property that no lofts or factories will be permitted within their zone. There are many localities available for residential improvement and these sections are protected against undesirable encroachments.

"It is most important for property owners to realize that the resolution is a primarily protective measure, though it restricts. Property owners have the assurance that they cannot injure their neighbors' holdings, and also that in turn their neighbors are denied the same privilege. This fact automatically protects all alike, and should tend to create a market demand for various classes of buildings throughout the city. Owners can now feel free to repair their existing buildings and thus obtain a more adequate rental than is now the case. This in itself should

**DRAWING
MATERIALS**

CHARLES H. ROBBINS, JR.

125 S. 11th Street, Philadelphia
BELL PHONE, WALNUT 1086 KEYSTONE PHONE, MAIN 497

**BLUE
PRINTS**

tend to remove a large number of unsightly buildings which do much to mar the beauty of the city. Haphazard development is a thing of the past, and in a community as large as New York City it never should have been tolerated. There is no reason why one man should be permitted to erect a building in such a manner as to obtain light and ventilation from his neighbors without being willing to give in return an equal amount of light and air. To obtain this result has been one of the aims of the commission, and we have welcomed every possible kind of suggestion and have spent a vast amount of time in their study. To put the matter in a homely form, we have been in the position of hungry dogs who are anxious for bones. Even those suggestions which have seemed preposterous on their face, have in many instances, given us ideas which have been valuable in more ways than one.

"Although the Board of Estimate has adopted the zoning ordinance and the maps covering the whole city which accompany it, the work of perfecting the plan can go on indefinitely. At the last session of the Legislature, the zoning provisions of the charter were amended to provide for this. The Board of Estimate can at any time make alterations in the ordinance or the maps. Notice must be given, however, of any such changes, and a public hearing must be held. If the owners of 20 per cent. of the frontage affected by any proposed change protest in writing, then the unanimous vote of the Board of Estimate is required in order to make the change. This makes it possible for any locality that desires to go into the E district (commonly considered the detached house district), to bring their desire to the attention of the Board of Estimate and ask for the change."

* * *

Home Owners Decreasing.

AMONG the arguments cited in support of the zoning idea in New York City is the notable decrease that is taking place in the number of home owners.

The situation affecting home ownership in the city is epitomized under four points by Herbert S. Swan, writing in "The Record and Guide":

1. The number of rented homes is increasing faster than the number of owned homes.

2. While there is an increase in the number of owned homes, this increase occurs not among the free homes, but exclusively among the encumbered homes. In fact, there are more homes mortgaged in a given period than there are homes purchased. In other words, the encumbered homes are increasing at the expense of the free homes whose

owners are gradually either mortgaging them or joining the tenant class.

3. The owners of encumbered homes are not paying off and cancelling their mortgages in order that they might become the owners of free homes. A new lien is contracted for every mortgage liquidated on an owned home.

4. Only a moiety of the equity is acquired in any new home purchased. For every home in which a full equity is acquired, another home is mortgaged.

The percentage of owned homes in the city is declining; that of rented homes increasing. In 1900 one family in every eight owned its home; in 1910 only one family in every nine owned its home. In 1900 only one family in every twenty owned a free home; in 1910 only one family in twenty-eight owned a free home. In 1900 42.2 per cent. of the owned homes were free homes; in 1910 30.2 per cent. of the owned homes were free homes. During this ten-year period the total number of homes in the city increased 41.2 per cent.; the number of free homes declined .8 of 1 per cent. The number of free homes in the city, instead of being increased by the erection of new homes, lost one of the homes owned free in 1900 for every thousand new homes constructed during the decade.

Out of every thousand new homes constructed in the decade 110 were owned homes. In Chicago, 290 were owned homes; in Cleveland, 312; in St. Louis, 327, and in Philadelphia, 451. In only one of the next five largest cities was the number of owned homes per thousand new homes less than in New York. In Boston it was 88. Of the fifty-one cities in the United States with a population exceeding 100,000 the number of owned homes per thousand new homes was probably greater in Spokane than in any other city. There it was 584.

The number of free homes per thousand new homes was a minus quantity in New York. But in Philadelphia 95 out of every 1,000 new homes built were free homes; in Cleveland, 112; in Chicago, 126, and in St. Louis, 173. Even in Boston it was 8. In Spokane it was 283.

Chicago, with less than half as many homes, has more owned homes than New York. New York has only two-thirds as many free homes as Chicago. Philadelphia, with less than one-third the number, has more free homes than New York.

* * *

Conditions in Philadelphia.

SUCH conditions as led to this legislation in New York are not likely ever to be found in Philadelphia, according to the "Ledger," for the one reason that Philadelphia possesses so

much more ground than New York, if for no other, the conditions of congestion which have so seriously affected sections of New York City are not likely to be repeated here. Economic reasons are also playing a much larger part in the erection of very tall buildings than they did formerly. It has been found in many instances in New York City, notably in the case of the Woolworth and Singer buildings, that they are not particularly good investments. Indeed, some years ago the owners of the Singer building admitted that the building was not a good investment, but declared that they were content to charge off the deficit in revenue to advertising.

Philadelphia has several central sites on which it is probable tall buildings of the office building type will be erected within a few years; but these sites are located so far apart from each other that neither the congestion nor the other evils complained of in New York are ever likely to result from their construction.

* * *

The Placing of Statues.

WE ventured to criticize, in a recent number, the unwisdom that has marked the general placing of statues here in Philadelphia, citing in particular the Barry statue in Independence Square, which, in view of the care and time that has been expended on the work of restoring the historic old building and its grounds to the aspect presented by them in Revolutionary days, sounds a decidedly jarring and discordant note.

We are naturally pleased to note that the paragraphs referring to this subject have won their way to the attention of Philadelphians with an interest in the relation which questions of the kind bear to the City Beautiful.

Mayor Smith has offered a suggestion that the seven statues on the City Hall Plaza be placed on well-chosen sites along the Parkway when the new boulevard shall be completed.

* * *

Views of William S. Perrine.

WILLIAM S. PERRINE, the scholarly editor of "The Evening Bulletin," writing his approval of the Mayor's suggestion, adds the recommendation that the Franklin statue on the Chestnut street side of the Post Office be also removed to the Parkway, where it may gain something of the impressiveness of its replica in the Passy district in Paris.

"At the same time," writes Mr. Perrine, "the mistake which was made some years ago, when the Barry statue was provided with a site in Independence Square, should be corrected and a much more fitting one given to it in

one of the best quarters of the Parkway.

"There has never been any other statue than that of John Barry in Independence Square. At various times, however, there have been plans or movements for the erection of statues of American patriots in the Square or State House Yard, as some Philadelphians prefer to call it. Long before the Civil War, for example, there was a movement in which the thirteen original States of the Union were to take part in the erection of a great memorial in honor of the Declaration of Independence, and the patriots of the Revolutionary era. At the time when the Baily statue of Washington was dedicated on the Chestnut street pavement in front of Independence Hall, there were many who thought that it should have been placed in Independence Square, together with a statue of Thomas Jefferson in recognition of him as the chief author of the Declaration.

Many years afterward there was much agitation over the attempt, which was almost accomplished, to put the equestrian statue of Washington in the Square—the one now in old Fairmount Park. But Commodore Barry's statue, which was admitted to the Square while Mayor Weaver was in office, has always seemed to bear a disproportionate and almost incongruous relation to the State House and the background, in the absence of all other statues of the great men whose public careers were peculiarly identified with Independence Hall."

* * *

WHICH parallels somewhat closely our own views on this subject as set forth in the Editorial Comment in question some weeks back.

And, by the way, haven't we an Art Jury which is supposed to take care of questions of this calibre?

EDITORIAL NOTES

It is brought out that approximately \$761,646,000 has been put into companies formed for the purpose of manufacturing war materials during the last two years.

Most of the enterprises were represented by powder, shrapnel, dye, chemical, ship, oil and gas concerns. The last two classes were by far the largest, calling for more than \$432,000,000. A grand total of 411 companies figured during the period named. July showed the smallest total of incorporated companies in eleven months.

This activity among munition makers has resulted in an immense volume of new building made necessary by new plants, extensions and alterations.

* * *

John D. Rockefeller, Jr., is about to erect on Fifth avenue, adjoining the Church of St. Thomas, in New York City, a six-story store and office building of novel and attractive architecture. The building is to be fire-proof throughout, is to be of the finest quality of materials and is to be restricted to a desirable class of tenants.

The fact that the structure is limited to six stories has started talk about a reaction against the skyscraper type of building.

* * *

A prominent New York builder is credited with the assertion that lower land values in that city more than offset higher building costs and that to this circumstance is due the salvation of the building situation in Greater New

York. He claims it to be his experience that as a result of lower land values it costs no more to build an apartment house in that city to-day than it did two years ago.

* * *

The quarterly report of the U. S. Steel Corporation was a revelation of extraordinary earnings and exceeded the wildest prediction. Net earnings of \$81,126,048 for the quarter and \$141,839,672 for the first half year fully warranted the extra dividend on the common stock. Both production and earnings exceeded those of any previous quarter in the company's history. The unfilled orders, amounting to 9,640,458 tons, will occupy the mills for several months.

* * *

The total value of the slate sold in 1915 decreased 13 per cent. from the previous year. For the first time since 1901 the total value of slate sold fell below \$5,000,000. Roofing slate decreased 5 per cent. in quantity and 10 per cent. in value. For the first time since 1898 the number of squares sold was less than 1,000,000 and for the first time since 1900 their value fell below \$4,000,000. Mill stock decreased nearly 15 per cent. in quantity and 17 per cent. in value, the lowest value since 1908, according to the latest statistics of the U. S. Geological Society.

* * *

Mayor Mitchel, of New York City, made the following statement yesterday: "From 1911 to 1916 there was a

decline of \$120,000,000 in the assessed value of land in Manhattan south of 40th street." This is an enormous loss, and directly affects the city's borrowing capacity and the tax rate throughout the five boroughs. Much of this loss could have been avoided had the city exercised a reasonable control over its own development.

"A certain measure of order and system in city building is essential not only to the public health, safety and general welfare, but to the conservation of property values."

* * *

New Castle, Del., is to have a large shipbuilding establishment, a new concern, the Delaware Shipbuilding and Engineering Corporation, capitalized at \$1,000,000, having purchased for \$30,000 a tract of 11 acres from the Pennsylvania Railroad Company. The project, it is understood, is backed by capitalists who are interested in shipbuilding on the Great Lakes. At first steel and wooden boats, 250 and 300 feet long, and marine engines will be built; larger ships later. A capable engineer, who has been on the Great Lakes, will have general charge of the New Castle project. The company is expected to begin operations in a few months, and 1000 men will probably be on the payroll one year hence.

Are you aware, Mr. Advertiser, that this paper circulates in 5,000 offices, reaches every architect of any prominence in the East and the Secretary of every architectural club and chapter in the country?

Sunday School and Chapel, Queen Lane Manor, Philadelphia. Architect, Lawrence

Hauls Coal in Winter— Building Materials in Summer

Martin F. Connor of Germantown, Phila., says:
“Our Autocar is used for all kinds of work—coal
hauling in Winter, building materials in Spring and
Summer. This morning for instance our car started
at 7 o’clock, has made six trips with soft coal and is
on its seventh trip now, loaded with Jersey gravel—
and it’s only half past ten.”

Write for illustrated catalog and list of more than 4000
concerns using Autocars in every line of business.

The Wonderful Little Tank Heater

Plenty of Hot water *every minute* in the day and night.
Costs but a few cents' worth of coal a day. The most satis-
factory as well as the most economical way of heating water.

Just the thing for Summer when the range fire is out.
Keeps the cellar dry also.

Proposals

Bonds. Improvements. Equipment.

As the Home Office and Headquarters of the Most Important Financial, Railroad, Engineering, Structural, Manufacturing and Equipment Firms in the United States, Pennsylvania offers a Particularly Rich and Productive Field for "Proposal" advertising. "The Builders' Guide" is the Only Medium in this Field.

SEALED PROPOSALS.

Bids for the furnishing of materials and construction of new High School Building, Ridley Park, Pa., will be received by the Ridley Park School District at Ridley Park School, Ridley Park, Pa., Tuesday, August 15th, 1916, 8 P. M. Proposal bond to accompany bids. The Ridley Park School District reserves the right to reject any or all bids. Separate bids will be received for Plumbing, Heating and Electric Work. Plans and specifications can be seen at the office of the architect, Paul A. Davis, 3rd, 1713 Sansom street, Philadelphia, Pa.

RIDLEY PARK SCHOOL DISTRICT.

G. L. Jones, President.

J. B. Partridge, Secretary.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., August 1, 1916.—Sealed proposals will be opened in this office at 3 p. m. September 12, 1916, for the alterations, etc., to the building adjacent to the United States Post Office at Brooklyn, N. Y. Drawings and specifications may be obtained from the Supervising Chief Engineer, 727 Customhouse Building, New York City, from the custodian of the Brooklyn, N. Y., Post Office, or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

Portland Cement, Sand or Gravel by the carload. Consult DAVID FRANCE CO., Tasker Street Wharf, Delaware River, Philadelphia.

BUILDERS' GUIDE

Devoted to the Advancement of American Architecture, Structural
Engineering and the Building Trades

VOLUME XXXI
Number 33

PHILADELPHIA
August 16, 1916

As The Editor Sees It

Defining Fireproof Construction.

WHEN may a building be said to be "fireproof"? We have heard the term "fireproof" referred to as a misnomer by building experts whose contention is that while a building may be slow-burning construction, or may be fire-retardant, such a thing as a "fireproof" structure simply does not exist.

It is an old saying in the building trades that no building can be made any more fireproof than its contents.

Be that as it may, the New York Legislature in the new Labor Law adopted in that State supplies a very fair and, to our way of thinking, a reasonably efficient definition of just what is meant by the term "fireproof construction" where factories are referred to.

"Fireproof construction. A building shall be deemed to be of fireproof construction if it conforms to the following requirements: All walls constructed of brick, stone, concrete, or terra cotta; all floors and roofs of brick, terra cotta or reinforced concrete placed between steel or reinforced concrete beams and girders; all the steel entering into the structural parts encased in at least two inches of fireproof material, excepting the wall columns, which must be encased in at least eight inches of masonry on the outside and four inches on the inside; all stair wells, elevator wells, public hallways and corridors inclosed by fireproof partitions; all doors, fireproof; all stairways, landings, hallways and other floor surfaces of incombustible material; no woodwork or other combustible material used in any partition, furring, ceiling or floor; and all window frames, doors and sash, trim and other interior finish of incombustible materials; all windows shall be fireproof windows except that in buildings under seventy feet in height fireproof windows are required only when within thirty feet of another build-

ing or opening on a court or space less than thirty feet wide, and except further that any window not within thirty feet in a direct line of another building not in the same vertical plane, nor opening on a court or space less than thirty feet wide, nor within fifty feet in a vertical direction above the roof of a building within thirty feet, may be provided with plate glass not less than one-fourth of an inch in thickness, no light of which shall exceed seven hundred and twenty square inches in area; except that in buildings under one hundred and fifty feet in height there may be wooden sleepers and floor finish and wooden trim, and except that in buildings under one hundred and fifty feet in height heretofore constructed there may be wooden sleepers, floor finish and trim and the windows need not be fireproof windows, excepting when such windows are within thirty feet of another building."

The objection might be urged to the foregoing section that it is somewhat drastic, but if the act is enforced, and the indications are that it will be, it ought to result in factory buildings that are as nearly "fireproof" as it is possible for human ingenuity to make them.

* * *

An Important Recent Decision.

BY the way, under the terms of a decision just handed down by Justice Geigerich, of the Supreme Court, the new Labor Law in New York State takes precedence in so far as factory buildings are concerned, over all other acts and ordinances.

Incidentally, the State Industrial Board, which is charged with the enforcement of the Labor Act, is of paramount authority to the Fire and other commissions in the matter of orders affecting factory construction.

The case at bar was an application made by William H. Browning, of

Browning, King & Co., through his attorney, Alexander C. MacNulty, for a writ of mandamus commanding the Fire Commissioner to cancel an order requiring Mr. Browning to inclose in fire-resisting material a lightshaft in the factory building at 16 West Fifty-seventh street. The order, like all of the similar orders issued by the Fire Department, was based on alleged authority given by Chapter 12, Article 2, Section 20, of the City Ordinances. Mr. MacNulty argued that the provisions of the Labor Law took precedence of the ordinances and were exclusive in the matter. He quoted an opinion of the Court of Appeals, which pointed out the evils likely to result from the vesting of concurrent power over the same subject in two different bodies or officials. Justice Geigerich said that the requirements of Sections 79-a, 79-b, and 79-c of the Labor Law were not in substitution of the requirements of any general or special law or local ordinance relating to the construction, equipment, or maintenance of buildings, but that the provisions of such sections should be observed as well as the provisions of these sections. Then he said:

"Now, it seems to be clear that the ordinance above referred to does give power to the Fire Commissioner of this city to establish requirements inconsistent with the provisions of the section referred to, or at least inconsistent with the rules and regulations covering the same subject that may be adopted by the Industrial Board under the provision of that article.

"It is true that there is nothing in this case to show that there is any conflict or inconsistency between the order of the Fire Commissioner and any rule or regulation so far adopted by the Industrial Board, but this makes no difference. The section just above quoted is not limited by its terms to a case where some officer has established requirements inconsistent

with the rules and regulations of the Industrial Board, but it applies to the power to establish such requirements, and if such power is given by any other provision of law or ordinance, then such provision is superseded by the sections of the Labor Law above referred to. The motion is therefore granted, with \$50 costs."

The decision has created something of a stir in New York City, for the reason that it practically invalidates thousands of fire prevention orders issued by the Fire Department within the past few months and affects some 36,000 such orders promulgated within the past two years.

* * *

Life of a Steel Frame Building.

WHAT is the life of a steel frame building? When these structures were first erected, a little more than a quarter of a century ago, many predicted that the steel would rust, and within ten or fifteen years the condition of the structure would become dangerous.

But there now are standing a number of buildings more than twenty-five years old, constructed on the steel frame principle, with the weight supported by the skeleton and the walls merely a shell.

These buildings are in good condition, practically as solid and substantial as when they were built. But recently the razing of the old Champlain Building on the northwest corner of State and Madison streets, Chicago, according to Straus's Investors Magazine, gave the opportunity to examine the condition of the frame work and allow experts to draw the deduction that a properly constructed steel frame building will last for hundreds of years.

The Champlain Building was constructed in 1893 on a lot 63 by 106 feet. The building was fifteen stories in height, with one shallow basement. It had structural steel framework, with joists five feet apart; flat tile arches and fire-proofing of terra cotta brick and terra cotta curtain walls, and a so-called floating foundation—shallow spread footings on blue clay. The steel frame was painted with iron oxide paint, two coats.

When the building was torn down after standing for nearly a quarter of a century it was found that the steel was practically unaffected by rust, the greatest corrosion visible under the microscope being .009 of an inch. Practically speaking, the steel was in as sound condition as when it was first put in place, and all signs indicated that the building was good for an indefinite period. The footings, steel I-beams—unpainted—imbedded in Portland cement, showed no corrosion whatever.

Holabird & Roche, the architects of

the building, who conducted the examination when it was torn down, came to the following conclusions as a result of their investigation:

"The condition of this building seems to indicate that the exclusion of air and moisture is essential for the preservation of the steel and also of the paint. The appearance of the rust suggests that it may have been formed soon after the building was constructed, and that it has not been progressive. Even if the worst case of rusting has been progressive and should continue at the same rate, it would be more than a century before failure of the members would result.

"The present practice of incasing all structural steel in concrete, or plastering it with Portland cement mortar; separating the pipe shaft from the steel and of using greater care in covering terra cotta anchors, certainly safeguards the framework of the structure for a much longer period than the probable economic life of such buildings."

* * *

Historic Old City Markets.

THE old city markets which formerly occupied Market street, Spring Garden street, Callowhill street, Second street between Pine and South and North Second street, have a special interest to the student of history and to the antiquarian as relics of an early period in the city's development. They are also of interest as having been probably the very earliest centers of retail business of every kind. In an article on city markets prepared by Charles W. Baldwin, clerk in charge of markets of the Bureau of City Property, we learn what an important influence the old High street market exercised on general business. Like all the old market houses, it occupied the middle of the street on High street just west of Second and eventually gave the name of Market street to that thoroughfare. It was built in 1707 and known as "The Towne House," and was admitted to be the handsomest and most pretentious building in the Colonies in its time. The first floor or basement was used as a market house and from its balcony the early Mayors of the city were accustomed to deliver their inaugural addresses. City Councils and the State Legislature met in the Towne House and continued to meet there till the State House was built in 1735. In its immediate vicinity virtually all the retail business of the city was conducted, and there are many who date the decline of the section around Second and Market and Third and Market streets as a retail business center from the removal of the old market house in 1859.

But Two Houses Remain.

ONLY two of the old market houses of the city remain, the North Second street market, on Second street between Fairmount avenue and Poplar street, which was established in 1785, and the South Second street market, on Second street between Pine and South streets, which was built in 1745 by Edward Shippen, the first Mayor of Philadelphia, who, together with Joseph Wharton, advanced the money for its construction with the understanding that they were to be eventually reimbursed by the city for their outlay, though whether they were or not so reimbursed history sayeth not. Though the removal of these two markets has been frequently urged as obstacles to traffic, they have been allowed to remain and probably will continue to remain, as there are many who see some connection between the removal of the old market houses and the high cost of living to-day as compared with a generation ago. The North Second street market has lately been completely renovated by the city according to modern sanitary ideas with regard to the exposure of food for sale at the trifling cost of \$12,000, and an appropriation has been secured to renovate the old South Second street market house, which it is promised will be done without sacrificing the Colonial aspect of the building. The plans for renovating both buildings provide for the inclosing and screening of food exposed for sale and the installation of facilities for flushing and cleaning the buildings. The City of New York has in the last few years spent hundreds of thousands of dollars in renovating its old market houses, many of which it has retained, and the Astor estate recently spent upward of \$1,000,000 on the erection of a modern sanitary market house on a lot owned by the estate on the upper East Side.

* * *

Advance in Market Construction.

THE immense strides made in market construction within recent years is shown in the remodelling of the interior of the Terminal market in this city. Stalls of glazed brick and tile, cement construction, modern ideas as to drainage and sanitation, have made this market a show-place of its kind. Superintendent McKay, under whose supervision the remodelling of the interior was carried on, visited all of the notable modern markets of the country before embarking on the work and claims to have evolved a scheme of construction and arrangement superior to anything else of the kind in the country.

No More Advertising Banners.

ADVERTISING banners strung across the streets from building to building have been ordered removed by Superintendent of Police Robinson, with the approval of Director of Public Safety Wilson. The action is said to have been taken at the instance of the Art Jury. The superintendent's order states that such banners are unsightly and dangerous, and a nuisance contrary to law. Owners of all present banners will be allowed a reasonable time in which to remove them, and those failing to comply with the order will be reported by patrolmen. No more banner permits will be issued.

This is admirable so far as it goes, but why not go just a step farther and do away with the equally hideous and not less dangerous billboards that deface some of our finest thoroughfares?

Has the Art Jury no jurisdiction in the matter of these ugly and often offensive billboards placed like great screaming blots often in the finest residential sections?

If the advertising banner is objectionable, surely the billboard and the fence advertising standard is equally so.

Why balk at the one and look with toleration if not complacency upon the other?

* * *

A Sample of Quick Work.

TWO massive girders, each weighing 88,000 pounds, were swung into place without interfering with traffic for a minute, at the new bridge over the Philadelphia and Reading Railway between Jenkintown and Noble stations in Abington township.

Immediately following the passage of a New York express train, flat cars on which one of the big metal supports were loaded were shifted into position and two heavy cranes swung the girder into place.

Before the next train arrived at the bridge which will eliminate what is known as the "Switchville" crossing, a swarm of structural workers had securely fastened the big piece of metal. Later the second girder was put in place.

of \$2 a ton in steel bars and the imminence of a further rise for wire and wire products. Domestic buyers of other steel products who have been abstaining from competing with the foreign munition trade, are again in the market with large inquiries for steel rounds, blooms and forgings. Foreign buying of a new kind is also setting in strongly. While the finished munition business may be ebbing, the foreign demand for the raw materials is growing.

* * *

The architects' registration act which has come into force in New York State is rather more stringent than those in other American States. It provides that nobody must practice under the title of "architect" unless he has received a certificate of qualification from a board of five examiners. In New Jersey, for example, a diploma or other evidence of graduation from a full course of architecture may be accepted as a satisfactory evidence of competent knowledge of architecture, design and construction. In New York this must be supplemented by at least three years' practical experience.

In New Jersey, again, any person who was engaged in the practice of architecture when the act was passed, and presents an affidavit to that effect, is entitled to receive a certificate without further test. In New York the act provides that an architect must have been engaged in the profession for more than two years before the passage of the act, and must also present satisfactory evidence as to character, competency and qualifications before he is entitled to a certificate.

EDITORIAL NOTES

In their monthly review of financial and trade conditions, Edward B. Smith & Co. say: "American manufacturers are gaining through foreign trade, influenced as it has been and still is by war currents, in a way and to an extent which has very great importance for this country. Along with an actual falling off in imports of finished manufactures there goes a huge increase in exports of manufactured products. Government figures for eleven months of the latest fiscal year make striking demonstrations of this fact. The result of our world commerce was to give American manufacturers and labor a net advantage of more than \$2,000,000,000. Earnings have accomplished wonderful results in a year for American industrial concerns. They have paid off floating debt, they have reduced funded indebtedness, they have modernized plants and equipment, they have paid for extensions of facilities, they have made dividends or extra dividends, and they have built up besides great cash funds which stand to guarantee the maintenance of dividends.

* * *

The total amount of capital invested in manufactures in Pennsylvania in 1914, according to the Census Bureau of the Department of Commerce at Washington, was \$3,149,006,000, a gain of \$400,405,000, or 14.6 per cent. over the figures for 1909.

Jacob Feldman, builder, of 1017 Jackson street, was held under \$500 bail for a further hearing by Magistrate Harris on the charge of disregarding building ordinances relative to filling the sidewalks with rubbish. Feldman has been erecting a half-row of houses on Pine street between 59th and 60th. According to James McCabe, a building inspector, Feldman allowed rubbish to accumulate on the street and also mixed mortar on the asphalt pavement.

McCabe testified that, although Feldman had been notified several times to clean up the rubbish, he paid not attention to the order, and that even after his license had been revoked he went on with building operations.

* * *

Fire losses in the United States and Canada in July were \$23,013,800, as against \$12,247,500 in June last and \$9,066,800 in July, 1915.

* * *

Fundamental conditions in the building market have been but little changed by the events of the week, except that the time when building operations of the first class are to be resumed has been put a little farther off, if owners are determined to wait for lower prices on structural steel.

A higher rather than a lower level of values is foreshadowed by the advance

SPECIALIZED MEDIA FOR SPECIALIZED THINGS.

It must be evident to any thinking man that the place to advertise commodities or appliances special to any given industry is in the publications that reach that industry and that such advertising, if well written, well displayed and persistently kept up, will not only effect the desired sales, but will build up a permanent good-will asset of inestimable value. . . .—R. R. Shuman, in "Standard Advertising."

The business man who grudges a commission to an advertising agent who thinks "he can do it himself" is usually about as intelligent as he would be if he grudged the commission of the architect and decided to build his store for himself.

Contracts Awarded

Scope of Contract and Successful Bidders; "Inside" Information for the Material Man and Interior and Exterior Fitter.

There's one variety of advertiser who gets our Angora. This is the chap who can't afford a large space and doesn't advertise, as a regular thing, because a small space "isn't seen." Some of the biggest advertisers we have started out with small space. Ask them whether the small space is seen. If advertisers had to wait until their businesses developed to full page stature before advertising, there'd be mighty few advertisers. The big man becomes big by growth. And growth starts with the seed.

Louis Wesehnef (O), 759 South Fourth st.
Harry Slass (C), 1809 North Seventh street.
Cost, \$540. Store dwelling, change bulk win-
dows and interior alterations, 759 S. Fourth
street.

Convoy & Keenan (O), 123 School lane. M.
Moister Co. (C), 3931 North Sixth street.
Cost, \$900. Garage, portable, 18x31 feet, gal-
vanized steel sheets, 2218 W. Ontario street.

Green Estate (O), Equitable Trust Co.
John McShainn (C), 10 South Eighteenth st.
Cost, \$1,200. Hotel, interior alterations,
Eighth and Chestnut streets.

E. Barrick (O), 4010 Chestnut street. War-
ren Biscoe (C), 3954 Ludlow street. Cost,
\$1,000. Offices, interior alterations, 4010-12-
14 Chestnut street.

Dr. Strawbridge (O and C), 1418 N. Fif-
teenth street. Cost, \$600. Garage, brick, 1
story, 18x16 feet, 1418 North Fifteenth street.

Mrs. Bricker (O), 1224 Spruce street. G.
K. Frank (C), 1113 Cherry street. Cost, \$300.
Offices, interior alterations, 1224-26 Spruce
street.

G. Danata (O), 1331 Christian street. A.
DeMarco (C), 1224 Christian street. Cost,
\$300. Dwelling, brick, 1 story, slag roof,
1339 Christian street.

Peter MacDonald (O), 201 North Sixth st.
Morris Sebel (C), 903 Cherry street. Cost,
\$386. Tin manufacturing shop, 1 story, tin
roof, 16x18 feet, cement floor.

Mrs. Tobey (O), Oregon avenue. H. Kuster
(C), 3646 G street. Cost, \$415. Saloon, new
flush bulk windows, northeast corner Six-
teenth and Oregon avenue.

Land Title Trust Co. (O), Broad and Chest-
nut street. H. B. Davis (C), 240 North Six-
teenth street. Cost, \$2,600. Offices, altera-
tions, 309 Walnut street.

Vim Motor Truck (O), Twenty-third and
Market streets. George Taylor (C), 247 North
Watts street. Cost, \$350. Manufacturing
building, elevator shaft, Broad and Hunting-
ton streets.

Simmon Hardware Co. (O), 425 Arch st.
George Taylor (C), 247 N. Watts st. Cost,
\$300. Warehouse, elevator shaft, 418-422
Cherry street.

M. Grabayes (O), southwest corner rank-
lin and Girard avenue. G. Peebles Co. (C),
37 North Tenth street. Cost, \$340. Hotel,
interior alterations, southwest corner Frank-
lin and Girard avenue.

Gulf Refining Co. (D), Fifty-eighth and
Schuylkill river. Chas. Colyan (C), 2065 S.
Lacford street. Cost, \$6,000. Warehouse, 1
story, slag roof, 94x62 feet, frame and inter-
ior alterations.

Fastover Synagogue (O), Sixth and Seigel
street. Miller & Staller (C), 326 South street.
Cost, \$1,200. Synagogue, interior alterations
southwest corner Sixth and Seigel streets.

Geo. M. McHadden (O), 119 Chestnut street.
J. S. Cornell & Son (C), 239 Land Title Build-
ing. Cost, \$800. Offices, interior alterations,
115 Chestnut street.

Mr. Forsyth (O), Meehan avenue, W. D.
Schock (C), Twenty-fourth and Pleasant sts.
Cost, \$700. Bungalow, frame, 1 story, 21x21
feet, Seffort street and Ridge avenue.

Joseph Gorregan (O), 1427 South Fifty-
fourth street. Conneen Const. Co. (C), 1829

Filbert street. Cost, \$1,860. Saloon and
dwelling, new windows and interior altera-
tions, Fifty-seventh and Eastwick avenue.

Schuylkill Forge Co. (O), American and
Pike streets. John J. Harding (C), 723 N.
Twenty-sixth street. Cost, \$5,600. Black-
smith's shop, brick, 1 story, slag roof, 20x20
feet, 1 story, rear, 43x84 feet.

Oscar Lorberg (O), 203 North Broad street.
Lam Building Co. (C), 1001 Wood street.
Cost, \$3,500. Store, brick, 1 story, slag roof,
20x60 feet, 671 North Broad street.

Endura Manufacturing Co. (O), Sixty-third
and Eastwick avenue. Hughes-Foulkrod Co.
(C), 1409 Commonwealth Building. Cost,
\$3,000. Factory, brick, 1 story, 20x30 feet.

Store, 461 North Second street, \$400. Es-
tate of John McCann (O). Pomeroy Con-
struction Co. (C), 1609 Ranstead street. Fire
repairs.

Dwelling, 1021 North Lawrence street, \$500.
Mike Glazier (O and C), 1021 North Law-
rence street. Brick, 2 stories, 13x11 feet, tin
roof.

Church, Forty-seventh street and Kingses-
sing avenue, \$4,500. Church of the Atonement
(O), on premises. C. F. Bachler (C), 146
North Tenth street. New heating plant.

Apartments, 2007 Chestnut street, \$700.00.
Derbyshire Esate (O), on premises. John
Baizley Iron Workes (C), 514 South Delaware
avenue. Fire escape.

Residence, 106 West Upsal street, \$765.00.
Robert R. Montgomery (O), on premises.
John E. Walt (C), 204 East Willow Grove
avenue. Brick chimney and interior altera-
Residence, 4246 North Broad street, \$300.
Caroline M. Weber, 4246 North Broad street.
Henry P. Schneider (C), 3713 Old York road.
Bay window.

Garage, 1515 North Bailey street, \$1,280.
Cornelius Gleason (O), 1728 North Twenty-
fifth street. Brick, 1 story, 16x34, slag roof,
cement floor.

AN INQUIRY FROM THE ORIENT.

The "Builders' Guide" Sought by an Archi-
tect at the University of Nanking,
Nanking, China.

University of Nanking,
Nanking, China, July 7, 1916.
Building News Publishing Co.,
Perry Building,
Philadelphia, Pa.

Gentlemen:

Will you please send me a sample copy of
your paper, "The Builders' Guide." I am
in the market for some architectural papers
and would not want to miss the opportunity
of seeing your paper before making my final
choice of papers. Thanking you for this
favor, I am,

Yours very truly,

ALEX. G. SMALL,
Supervising Architect.

There never was, never will be, a better
medium for the man who has something to
sell to a given class of buyers than the trade
paper whose circulation is limited to that
class. Newspapers with their swollen circula-
tions strike at best but a chance target here
and there. The trade paper carries your rifle
fire to targets exclusively. You can't miss,—
if your ammunition's right.

We have pebbles all sizes. Cost less than what you are using. DAVID
FRANCE CO., Tasker Street Wharf, Delaware River, Philadelphia.

Trade News and Gossip

Cullings from the Week's News with a Special Interest for Men Engaged in the Structural Industries—What is Happening in Trade and Architectural Circles.

**John Pitcairn, largest stockholder of the Pittsburgh Plate Glass Company, which is known as the "Glass Trust"; president of the Loyalhanna Coal and Coke Company and a director of many other corporations, including the Central National Bank, died at his country home, Cairnwood, Bryn Athyn. He was the founder of the Swedenborgian Community and College at Bryn Athyn, to which he devoted much of his time and wealth. He was a member of the Union League and the Art and City Clubs, of this city, and of the Duquesne Club, of Pittsburgh.

**In 1882 Mr. Pitcairn became interested in the Pittsburgh Plate Glass Company. The manufacture of plate glass was then in its infancy. He became the largest stockholder in that company, was its president for several years and for the last few years had been chairman of the board of directors. The company has grown steadily and is the largest producer and distributor of plate glass in the world.

**Mr. Pitcairn is survived by three sons, Raymond, Theodore and Harold. Outside of business affairs his greatest interest was in the religion of Emanuel Swedenborg and the Swedenborgian college at Bryn Athyn. At that place Mr. Pitcairn had under construction a magnificent Gothic church. The structure will not be finished for several years. The building will be of marble and stone and the finish of hard woods.

**Senator Edwin H. Vare entertained the members of the Contractors' Association of Philadelphia at Abendrhu, his country estate at Ambler, recently.

**The 125 members of the association who enjoyed the outing motored to Senator Vare's farm, leaving the Parkway, at Seventeenth and Arch streets. Forty automobiles were required to convey them.

**Among those who enjoyed the outing were Charles A. Ambler, speaker of the house; David Peoples, president of the Contractors' Association; R. A. Manwaring, secretary; H. W. Underwood, treasurer, and Ralph R. Lewis, assistant secretary.

**Directors of the association, who arranged the details of the outing, are: E. H. Vare, J. P. McNichol, E. F. Bennis, Francis Boas, Harry C. Ambler, John Mundy, J. J. McHugh, Thomas Reiley, Robert Higgins and Walter Maxwell.

**Occupants of property within the line of the Parkway will be ordered to vacate as soon as Mayor Smith affixes his sig-

nature to the \$9,000,000 appropriation ordinance passed by Councils.

**In regard to the high-speed transit program for which councils appropriated \$57,000,000, the Mayor said that a tentative plan had been agreed upon to build so that the Darby elevated, the Broad street subway and the line in the northeastern section of the city would be completed first. "Our thought," said the Mayor, "is to build first into those sections where traffic is heaviest."

**Despite the high prices, the building trade in Philadelphia and its vicinity is busy, and notwithstanding the indication of higher wages in some lines, the demand for new buildings is on the increase, and architects are working to the limit of their capacity in their endeavors to get the work in the builders' offices for estimates. There still continues too much revision, a certain percentage of which easily could be eliminated by a little care in getting approximate bids and then sticking closely to the specifications upon which the approximates were made. As mentioned before, revisions mean a waste of time of every one concerned, and if we ever hope to get some kind of a system of efficiency in estimating, this question of revisions must be taken up first.

**A prospect opens up before the building material trades that the congestion of foreign munition orders, with the consequent high quotations and slow delivery of structural steel, which is hold back domestic orders, will melt away before the summer ends.

**Information from inner circles of the steel trade is to the effect that the maximum production of munitions in this country will be reached in October. Orders from the Allies are running low as their own productive powers grow. The manufacturing industries of Great Britain, France and Russia are now able to produce finished arms and munitions, as well as shell steel castings and forgings, in quantities almost sufficient for their great needs. Consequently, the American output for foreign account will be diminished as soon as the contracts now in hand are filled. Then prices for steel and other metals will naturally recede.

**This will let in on a normal basis the flood of pent-up domestic orders for structural steel for building construction. Probably market quotations will anticipate the actual change. Since the first of the year plans for 14 large and small hotels, to cost \$16,000,000, and 90 apartment houses, to cost \$18,500,000,

together with a formidable list of office and loft buildings, have been planned and figured, in the Borough of Manhattan alone, but only a minority have been put under contract so far.

**On the first of July, in Manhattan Borough, official returns to the building Bureau gave 219 new building jobs in progress, and 74 not started. Alterations—617 in progress, 699 not started.

**A congestion of construction work is not improbable under the circumstances. The head of a prominent building material house said he did not know where men and teams were coming from to handle the material for the jobs, should they be suddenly started all together. He never remembered a time when common labor for handling material was so scarce in this city.

**One of the most important realty deals on Broadway during the last few months was the purchase by Henry Ford of a frontage of 129.6 feet by 54.7 feet on Fifty-fourth street. The plot adjoins the Hotel Woodward and has a depth of 86.8 feet. The old buildings now occupying the plot will be raised and a sixteen-story building for the Ford Company is being planned by their architect, Albert Kohn, of Detroit. The plot and the improvements when consummated will represent an investment of several millions. Joseph P. Day was the broker and it is understood the property brought close to \$600,000.

**William Fox, president of the Fox Feature Film Corporation, 126 West Forty-sixth street, New York City, is taking estimates for the construction of a moving-picture plant which will cost approximately \$1,000,000. This operation will be located in Corona, L. I., on Jackson avenue, extending from Astoria avenue to Flushing Bay, between Fifty-first and Fifty-third streets. The plans for the project have been prepared by Thomas W. Lamb, architect, 644 Eighth avenue, Manhattan, and call for the erection of a group of brick and reinforced concrete buildings of various heights and dimensions. The group will include studio and administration buildings, powerhouse, storehouse, garage, restaurant and office building, all fireproof throughout. Contracts for the construction of this plant will be awarded at an early date, and work will start shortly after.

**Less building was done in Newark, N. J., during the month of May than was done a year ago, nevertheless architects and construction men are more hopeful of the future. Two hundred and eighty permits were issued, 19 of which were for factory buildings and the balance were for dwellings of brick and frame at an estimated cost of \$182,475 as against \$211,995 in 1915.

**A notable improvement in the centre of the Philadelphia shopping district will be the new \$1,000,000 annex to the Snellenburg stores, which is to be erected upon the ground extending from Girard street to Clover, and

from Eleventh street west to the present Stephen Girard building.

**The building is to be of reinforced concrete construction, of the "flat slab" type, a system which gives economy of space and strength. The spans between the supporting floors columns will be spaced as to give the minimum obstruction to the view from any floor point.

**The exterior shows a well-studied design, using brick, stone and terra cotta in a manner to obtain a pleasing architectural effect. Its large window openings will provide both plenty of light and ventilation, two great essentials in this type of building.

**The building was designed and is being constructed by William Steele & Sons Company, and will be completed in eight or nine months from the date of the signing of the contract.

**Robert P. Berner, architect, has opened an office in Roscoe, N. Y., for the general practice of his profession and desires samples and catalogues from manufacturers and jobbers in building materials and supplies.

**New officers were elected as follows at the annual meeting of the New Jersey Association of Master Steam and Hot Water Fitters, held in Newark, N. J.: President, T. B. Cryer; vice-president, J. S. Boyce, Asbury Park; secretary-treasurer, Harry Geiser; directors: George Turner, Asbury Park; George S. Kappel, Camden, and Walter Lawson, Newark.

**Prof. Emil Lorch, of the College of Architecture of the University of Michigan, has been appointed advisory committee on education, a newly created office of the American Institute of Architects. Prof. Lorch served three years on the general committee on education.

**Municipal Engineers of New York City, at their meeting were favored with an address by Frank G. McCann, chief of the engineering staff of the New York City Department of Education, on the heating and ventilation of the New York public schools.

**George Dietel, architect, 706 Humboldt Parkway, Buffalo, N. Y., desires catalogues and samples of building materials.

**Charles G. Benson, architect, and Miss Martha Wall Andrews, architects, have formed the firm of Benson & Andrews, and have opened offices at 840 Broad street, Augusta, Ga.

**Geo. A. Fuller Company, general contracting, has moved its offices from the Trinity Building to the Fuller Building, Broadway and Twenty-third street, New York City.

**Edward Horstmann, Jr., was recently appointed chief engineer of the Schuster Fireproof Contracting Co., of Newark, N. J.

**E. C. Paul, construction engineer, Chicago, Ill., is the author of a comprehensive and technical work, recently issued by the National Lumber Manufacturers' Association, entitled "Heavy Timber Mill Construction Building." The book was written for the guidance of architects and engineers.

**W. A. Ward, architect, and Chester A. Studwell, village engineer, have recently moved their offices from Main street, where they have been located for some years, to new quarters at 34 Adees street, Portchester, N. Y.

**Renewed efforts to extend the use of warm air furnaces were decided upon at the recent meeting of the National Warm Heat and Ventilating Association, which was held in Cleveland. President John D. Green, of Detroit, was re-elected, as were the other officers, including Vice-president F. T. Giblin, Utica, N. Y.; Treasurer W. G. Wise, Akron, O., and Secretary Allen W. Williams, Columbus, O. The executive committee for the coming year will be composed of John A. Howard, Dowagiac, Mich.; E. P. Miller, Marshalltown, Ia., and Charles Seelbach, Cleveland, O.

**In connection with the publicity campaign, it was voted to authorize a committee to collect and expend a fund for advertising on a basis of double the apportionment of last year. This would give about \$50,000 to be expended in the coming year. Last year the money was devoted largely to advertising in the general magazines.

**Announcement is made of the retirement of the Howard Thermostat Company, Oswego, N. Y., from business. The factory equipment, stock on hand, patents, good will, etc., have been purchased by the Minneapolis Heat Regulator Company, Minneapolis, Minn. The deal was negotiated by William R. Sweatt, president of the Minneapolis company. For the present, the Minneapolis company will furnish the trade with Howard devices.

**The transaction marks the retirement of an old-established concern, the Howard Thermostat Company having been in business since 1893.

**Atlantic Radiator Co., Huntington, Pa., announces the appointment of Howard T. Gates as general manager of the company. Mr. Gates was formerly president of the Hudson Boiler Mfg. Co., of New York. Judson A. Goodrich, vice-president of the Atlantic Radiator Co., who has had the general management of the company, will devote his entire time to the sales department.

**Sims Co., Erie, Pa., designers and manufacturers of steam specialties, including the Sims feed water tanks, announces that C. J. Moulton, brother of the late P. A. Moulton, has been appointed manager of the company's New York office at 47 West Thirty-fourth street.

**Gurney Heater Mfg. Co., Boston, Mass., announces the removal of its New York offices to 11 East Forty-second street, where larger and better facilities are provided for this important branch. Richard B. Hunt is the company's New York manager.

**National Metal Trades Association held its eighteenth annual convention in New York. It was attended by 372 delegates, which is a record attendance for this organization. The new president elected at the con-

vention is W. H. Van Deervoort, of the Root & Van Deervoort Engineering Co., East Moline, Ill.

GREAT ROAD BUILDING ERA ABOUT TO BEGIN.

Conservatively estimated, \$1,500,000,000 will be expended by the Federal Government, the State governments, the counties and the townships in the next five years on road construction and maintenance, or an average of \$250,000,000 yearly.

It is around the \$150,000,000 jointly supplied by the National Government and the several States, half and half, that this enormous attention to the arteries of communication of the entire country will revolve. The roads receiving the joint attention of Federal and State authorities undoubtedly will serve as example highways for the work which will range from the big trunk lines down to the little road reaching the farmers "way back on the hill."

Texas receives the largest amount of all of the States, \$4,515,750; Indiana is generously treated in receiving \$2,100,000; while Georgia gets \$2,079,750, and South Carolina does fairly well, \$1,111,500.

Thus, it will be seen that before \$9,816,000 of the Federal \$75,000,000 is expended, four States must centralize their highway labors.

INSULATING AND RUST-PREVENTING PAINT.

An insulating and anti-corrosion paint for steel is now being made which it is claimed is impervious to water, brine, oil, fumes and gases. This paint consists of zinc chromate and inert pigments carried in a varnish vehicle. This material is made in seven colors.

Proposals

Bonds. Improvements. Equipment.

As the Home Office and Headquarters of the Most Important Financial, Railroad, Engineering, Structural, Manufacturing and Equipment Firms in the United States, Pennsylvania offers a Particularly Rich and Productive Field for "Proposal" advertising. "The Builders' Guide" is the Only Medium in this Field.

SEALED PROPOSALS.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., August 1, 1916.—Sealed proposals will be opened in this office at 3 p. m. September 12, 1916, for the alterations, etc., to the building adjacent to the United States Post Office at Brooklyn, N. Y. Drawings and specifications may be obtained from the Supervising Chief Engineer, 727 Customhouse Building, New York City, from the custodian of the Brooklyn, N. Y., Post Office, or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

As The Editor Sees It

Gas Company and Architect.

THE Third Mid-year Conference of the National Commercial Gas Association was made notable by an address by Mr. D. Kinckerbacker Boyd, of this city, on "How the Gas Company and the Architect Can Co-operate to the Best Advantage."

Mr. Boyd's address was listened to with marked attention by the gas men and was greeted with the heartiest approval. It enabled the illuminating experts to see the gas question for the first time from the viewpoint of the busy, practicing architect.

"I naturally approach this subject of co-operation," said Mr. Boyd, "from the standpoint of the architect and will suggest to you what you may do to assist us, leaving it to those members of your Association who take part in the discussion to tell us in what respect the architects may assist you in accomplishing the results for which we are both aiming: the service of the public."

"Architects, unfortunately, are not familiar with all that you have been doing in the rendering of service to the owners and occupants of buildings. This is largely because you have not informed them. It can be said at the outset that architects ought to welcome your co-operation in securing for the owners of buildings and all occupants the fullest return for the investment and the greatest amount of comfort and convenience."

"It is true, however, that large buildings, and other kinds also, have been erected without provision for gas. My feeling is that the architects and owners of these buildings have done themselves an injustice, due, I should say, to a lack of foresight and of knowledge of the diversified uses to which gas may be put."

"You must not overlook the fact that

your commodity is but one of a countless number of mediums with which an architect must deal in order to render a building completely ready for occupancy. About each of these he must know something—often, a great deal. Do you realize what a task this imposes? While we all appear anxious to co-operate in rendering fullest service to the occupants of buildings, the very first thing which you could do in this direction is to make our task lighter by furnishing us with information in regard to the installations necessary to make your product available for every possible use.

"This is the age of co-operation and of nationalization. You represent a great national industry and you ask our co-operation in utilizing its products to the greatest advantage of all. It ought to be very simple. We agree to co-operate and we ask you to furnish the information."

"Before I suggest ways in which I feel that you can assist us, individually and collectively, I ought, perhaps, to tell you of some of the practical activities of the American Institute of Architects."

"For years the Committee on Contracts and Specifications has been working to perfect the general conditions of specifications and to standardize other documents affecting the relations of architects, owners and contractors, and finally, with the active co-operation of the National Association of Builders' Exchanges and other organizations, adopted the "Standard Documents," which are enthusiastically hailed by all parties interested as a great step in the right direction."

* * *

Work of American Institute.

SOME years ago the Institute had a committee to confer with the National Association of Steam and

Hot Water Fitters, which held several conferences, resulting, besides a better understanding, in a recommendation that contracts for these branches and for plumbing and electrical work be entered into independent of the building contract.

"The Institute now has a special committee appointed at the request of the U. S. Bureau of Standards to confer with its engineers in the preparation of a National Gas Safety Code. Your Association, the American Gas Institute and other interested bodies, are co-operating with the government in this painstaking work."

"The Institute also has an active Committee on Fire Prevention, with Mr. Julius Franke, also a member of the National Gas Safety Code Committee, at its head."

"The Institute's interest in practical matters so vitally affecting the practice of the profession and so long overlooked, has finally culminated in the creation of a Committee on Materials and Methods, the formation of which was authorized only month before last at a meeting in Cincinnati. Professor Thomas Nolan, of the University of Pennsylvania, has been appointed chairman and is to recommend for appointment sub-committees in all the chapters of the country."

"So you will note that we are, through our own national body, lacking neither in organization nor interest in matters where it is possible for us to co-operate with other bodies in any manner such as this paper may suggest."

"And with you our interests coincide, for you cannot give full service in the utilization of your product unless we, representing the best interests of our client, furnish him with every known means for its consumption and use under the most efficient and economical conditions of installation."

Standard Piping Schedule.

ANATIONAL Basic Code with a piping schedule of minimum standards for sizes, lengths and weights would, therefore, work to the great advantage of all good master plumbers and contractors who would be enabled to estimate under stable and equable conditions and to install their work without being at the mercy of varying individual judgment to "proper sizes," etc.

"The piping schedule which your Association has this year adopted and has, so to speak, publicly registered in Sweet's Catalogue, is an important step in the right direction. I feel very much honored to have had, as the Consulting Architect on Sweet's Catalogue Service, a hand in its preparation and I hope that it may be taken up and criticised by the American Gas Institute, the American Institute of Architects and all other interested bodies, and later adopted. But even as it is, if put to use by all architects and others to whom it is in this manner made available, it will be of incalculable assistance and value, for it may now be written into specifications somewhat in this fashion (and I ask you to compare this with the conjectural, haphazard form before mentioned):

"This building is to be piped throughout for gas, to the openings and in the manner indicated on drawings, all piping to be in accordance with the Standard Piping Schedule and accompanying description of the National Commercial Gas Association, as printed on pages 1290 and 1291 of Sweet's Architectural Catalogue, 11th Edition, except in so far as any statutes or locality ordinances or rules of company supplying gas may change same, in which case the specifications as so changed shall be followed and they, together with all materials and workmanship, shall also be subject to approval of the architect. All piping shall be subject to the tests and approval of local inspectors having jurisdiction, or to the approval of the architect or his representative if there is no local company in the field.' Then should follow provision for the companies' service and connections to meters, or meter, etc., and, of course, the pipes and other materials should be mentioned by name. By following your standards as rapidly as developed, architects can assist you in their adoption.

"In connection with your piping schedule, or basic requirements, emphasis should be laid on the weight and quality of the pipe and fittings and of the methods of making threaded joints permanently tight, etc. These requirements should be incorporated as soon as may be, and, if it is within the range of possibility, you should, it seems to me, make

some arrangements for the testing of pipe and appliances and the issuing of labels similar to those included within the service of the Underwriters' Laboratories, Incorporated. Many of these matters will be covered by the U. S. Bureau of Standards in its National Gas Safety Code, but it will take a long time to perfect that code. Do not wait for the Government to do this, but rather assist it by adopting your own code first and let the Government have it as a basis to work upon and perfect as it is doing, I understand, with the National Electrical Code."

* * *

The Province of the Architect.

THE province of the architect is an old story, but while owners still live unwise enough to imagine that dispensing with the services of the architect is an economy there will always remain something to be said under this head:

"The duties and responsibilities of the architect, the part that he plays in the planning and erection of buildings, is a matter that is far from understood by owners and business men," says *The Building Review*, of New Orleans.

"It is common opinion that the employment of an architect necessarily increases the cost of a building project, whereas his professional training and experience and familiarity with the cost of labor and building materials and his ability to plan economically will save the owner the cost of his services beside giving him the artistic, convenient structure that he would not otherwise have.

"Architecture is a precise profession and correct planning is based on a knowledge of the scientific and accurate use of standard building materials. The architect will so design his building that waste will be eliminated and all parts will be so disposed that each will do the work it is expected to do economically and efficiently.

"Mediocre ability or lack of expert advice—in other words doing without an architect—will work just the opposite and the results will be proportionately commonplace if not disastrous.

"One of the architect's prime functions is to look after the interests of the owner. Without an architect who is to do this?

"Some owners imagine that they can attend to all this themselves as well as any architect.

"But the consequences are invariably the same. The owner fails to get the sort of building he hoped for and expected; the contractor gets unfair and unjust treatment and the fruits of the undertaking are dissatisfaction all around.

"The old maxim to the effect that the man who is his own lawyer has a fool for a client applies no less accurately to the profession of architecture, or, for that matter, to any profession which requires years of special training and subsequent experience to master."

The Philadelphia Plan.

MR. BOYD was careful to mention the fact that the difficulties referred to were not to be found in every section. In Philadelphia, for example, the United Gas Improvement Company has a form of specification that is in general use among architects and that relieves them of much of the detail associated with gas installations.

"Having made several recommendations concerning information," concluded Mr. Boyd, "let me offer one other suggestion, which I do in closing. At the same time I want to compliment you upon the excellent courses of instruction which you are conducting through your Association among gas company employees. It indicates a fine spirit and is typical of the modern ideal of service. But can you not go further and in that way still better co-operate with the architects? Can you not have a special or a post-graduate course to turn out consulting gas engineers? Can you not offer to the architects a companion to the electrical engineer—one whom architects may employ in the same capacity and on the same basis to develop gas installations—without affiliations with any one company? Or can you not use some means to encourage on the part of the consulting engineers who now lay out electrical installations a knowledge and appreciation of the value and advantage of gas installations for light, fuel and power, so that they, too, may co-operate with the rest of us? With that thought I conclude my paper, thanking you greatly for the opportunity you have given me to present it and expressing the hope that the discussion which may follow will bring us at least one step nearer to that co-operation which will help not only the architects and the gas companies, but the owners and occupants of all buildings erected and to be erected in this country."

There's one variety of advertiser who gets our Angora. This is the chap who can't afford a large space and doesn't advertise, as a regular thing, because a small space "isn't seen." Some of the biggest advertisers we have started out with small space. Ask them whether the small space is seen. If advertisers had to wait until their businesses developed to full page stature before advertising, there'd be mighty few advertisers. The big man becomes big by growth. And growth starts with the seed.

EDITORIAL NOTES

New York architects and realty men seem to be divided regarding the wisdom of the new zoning resolution. Those who favor the idea speak enthusiastically of the growth the city is due to take in beauty and symmetry as a result of the new restrictive policy. Those opposed to it are as gloomy in their predictions that it will seriously arrest the city's development and depreciate existing values.

* * *

The Ninth Annual Convention of the National Association of Building Owners and Managers, will be held at St. Louis on September 12 to 15. President Doty is using every effort to obtain a strong programme, and judging from the acceptances already received there is every likelihood that the convention will be a success.

David Whitcomb, of Seattle, will speak upon "The Relation of City Real Estate to the Government." Mr. Whitcomb became prominently identified with the association about four years ago when the convention was held at Seattle.

Albert Kern, Manager of the Dime Savings Bank and Ford Buildings, at Detroit, will take for his subject "Nestors," dealing with the pioneers in the field and what they have accomplished.

William Marshall Ellis, will take the subject, "Important Factors in the Success of an Office Building" as his text.

* * *

Instead of structural steel declining in price as the summer advanced, the contrary has occurred, and builders to whom the steel is the determining factor are confronted by the alternative of either paying the new price for a slow delivery or putting farther off their contemplated operations. Steel mills are still overborne with orders, if not for munitions, then for the raw materials from which munitions are made, besides a large and varied accumulation of domestic business.

* * *

A New York hotel, the Bossert, has fitted its roof garden to resemble the deck of a palatial yacht. Deck chairs, cabin accommodations, ship's bell and a huge smoke stack add to the illusion. The waiters are attired as stewards and sailors. The effect is said to be highly attractive.

* * *

D. Knickerbacker Boyd, whose address at the recent Gas Conference is the subject of editorial reference in this number of THE GUIDE, made an address before the National Association of Master Steam and Hot Water Fitters, re-

cently, on the subject of "The Relations Between the Architect and the Master Steam Fitter."

* * *

The two chief causes of labor shortage are the much greater volume of work that is to be done and the lack of normal immigration. As has been noted before in these columns, the shortage of immigration has a cumulative effect. Normally there is a steady flow of immigration, and the immigrants are absorbed in industry as they arrive. Each year that the immigration is abnormally light adds, therefore, to the shortage. The present shortage has now been accumulating for two years.

* * *

Plans for new buildings filed with the New York City Bureau of Buildings during July called for an estimated expenditure of \$45,472,250, compared with \$16,126,500 in June, \$16,963,600 in May and only \$7,028,700 in April.

* * *

Tests to determine the action of concrete and reinforcing steel in floor slabs of the flat slab type of building construction have been made by the Engineering Experiment Station of the University of Illinois on the Shredded Wheat Factory at Niagara Falls, N. Y., the Soo Line Freight Terminal at Chicago, the Schulze Baking Company Building at Chicago, the Curtis-Leger Company Building at Chicago, and a special test structure at Worcester, Mass.

The methods employed and the results are given in Bulletin No. 84 of the Engineering Experiment Station by Professor A. N. Talbot, and W. A. Slater. The data obtained have been analyzed with the result that many new facts of interest and importance to designers and builders of concrete flat slabs structure have been developed.

Copies of Bulletin No. 84 may be obtained from W. F. M. Goss, Director, Engineering Experiment Station, Urbana, Illinois.

* * *

Mr. Cass Gilbert received the honorary degree of Doctor of Laws at the last commencement exercises of the University of Michigan.

* * *

Those employees of the Joseph Dixon Crucible Co., who had joined the National Guard prior to its being called by the President and subsequently sworn into the Federal Service in June, 1916, will receive full pay while away doing military duty. These men will have their places kept open for them. This provi-

sion holds good until further announcement holds good until future developments make it necessary to change or modify it.

* * *

The adoption of technical specifications for the lumber to be used in buildings in the State of Illinois, will, through the co-operation of the manufacturer in branding his timber, in future give an owner of a building an assurance never before possible that his new structure will be fitted to stand the requirements of his industry, and will, when the specifications of architects are properly prepared, guarantee that the building will be erected with the proper quality of material.

The nature of the specifications is extremely technical. When the architect wants a specific quality of lumber for a building, for instance, requiring maximum durability and strength, he will specify the use of timber of a special grade, and the manufacturer's brand on this timber will guarantee to the architect that he is giving his client an adequate quality of timber.

The specifications are of interest to owners of buildings, for they will prevent the substitution of inferior lumber.

The form of specifications as adopted by the Illinois Society of Architects may be obtained from the National Lumber Manufacturers' Association, Chicago, Ill.

Small ideas, small methods, small men are becoming antiquated. This is the day of the broad outlook and big doings.

"HE THAT IS FOND OF BUILDING"

A Little Article on the Trials and Tribulations That Beset the Man Who, Wanting in Experience, Attempts the Feat of Getting Him a Home Built Within the Estimate.

By Noble Foster Hoggson.

"He that is fond of building will soon ruin himself without the help of enemies," was the confident declaration of Plutarch, while Kett, who proves himself to have been an ardent preparedness advocate, cautioned: "Never build after you are five-and-forty; have five years' income in hand before you lay a brick, and always calculate the expense at double the estimate." Good advice, or bad?

Philosophers and jokesmiths of all ages have had their various says about the man who puts his trust in fate, leaves his safe open and plunges blindly or other wise into a building operation. To-day in the comic weeklies and in the dailies his troubles are made light of and he is as prolific a source of cheerful ridicule as a certain justly well-known make of motor car.

A thing is tragic or humorous according to the point of view. The man who sits on a tack does not share the onlookers' amusement. In fact, he is not only pained at his own misfortune, but he is pained because he occasioned someone else to find a degree of pleasure at his unseemly plight. Now it is perfectly safe to make this positive statement in this connection: The person who witnessed the other's unfortunate encounter with the tack, never deliberately sits on the same tack himself; in fact, he is particularly cautious about sitting down anywhere soon thereafter without looking for a tack. Nor is this an indictment of tacks. Tacks serve a very real and useful purpose in this world, but they have their place, which is not in localities where they may be sat upon.

Now let us apply the principles of the tack episode to building. The man did not sit on a tack. He built a house or a skyscraper or a garage—it does not matter much—and when he finished, he discovered among other things that he was called upon to pay a great deal more money for the completed product than he had expected to pay. He had come in contact with a pretty big tack, and, for people who find amusement in such things, he presented a most ludicrous figure, a subject for much hilarious laughter. He told about his experience and he wrote about it, but he could not produce the tack to prove his case, so the people who laughed at him did not profit by his lesson, and they went about building in the same way he did. They regarded his warnings as a "Wet Paint" sign. They had to rub their fingers upon the painted surface to see if it had not really dried and the sign left on as a sort of April Fool joke.

It narrows down in the final analysis to a matter of ego. The man who intends to build

will not take heed of the man who has had an unfortunate experience in building, because he feels that he is shrewd enough to look after his own interests and safeguard his own rights, notwithstanding the fact that he is engaging for the time being in a business enterprise that is totally foreign to him. Benjamin A. Howes, in his book on "Building," recounts a typical case:

"Once upon a time there was a famous author who wanted to build a house—to build a home, as the real estate advertisements put it. He had plans drawn by an architect and got bids for its construction in permanent and fireproof material. 'But that's half as much again as I have allowed!' he cried. So it was decided to build in cheaper construction and 'by day's labor,' with the direct supervision of the author's family, thus saving the contractor's profit. When the house was finished—and it was very attractive, even though it would never be a family homestead, because it would hardly last long enough for that—and the famous author was happily ensconced, he was asked: 'And was the house built for your original allowance?' 'Half of it was!' replied the famous author."

When a man sets out to buy a five-cent loaf of bread he gets a loaf of bread for five cents. When he sets out to build a residence for twenty-five thousand dollars there are no good reasons why he should not be able to build it for that amount.

The man who is going to build should definitely know two things:

First. Exactly what he is going to get for the price he expects to pay.

Second. The outside limit of cost for the completed structure.

To demand these safeguards is perfectly fair and natural. In every phase of business to-day, except building, one knows in advance just what the cost of any specified piece of work will be.

In a building operation, as ordinarily conducted, no one participant is in a position to guarantee the work of all participants. The responsibility of the various contractors who execute different portions of the work is individual; the responsibility of each ends with the completion of his particular part; no one of them is in a position to guarantee anything beyond his own share or detail of the whole operation.

Usually the owner proceeds without adequate guarantee of the limit of cost; he does not protect himself against errors in plans, specifications and estimates. If the discovery of errors necessitates extra charge later, he must pay them; if such errors go undetected

his building may be defective and he may suffer from its diminished equity and earning power; if the plans and specifications are slighted in execution, if mismanagement occurs, if the building is not ready to earn income when expected, he must suffer loss.

A watch, an automobile, an engine or a printing press consist of hundreds of parts, assembled, adjusted and harmonized, by a single responsibility, to produce the finest unit, the maximum of effectiveness in every phase at the minimum of cost. It is the same with a building. All the separate branches and processes of a building operation require similar assembling, adjustment and harmonizing. A building is to be considered a building, in its truest sense, only when it is complete in every detail, ready for occupancy, in perfect order to answer all the needs, and to fulfill perfectly the purposes for which it was designed. A building operation may be considered successful when seven essential elements join to that end, in perfect harmony. The all-important units which combine to constitute the total of a magic seven, are arrangement, decoration and furnishing, appearance, cost, stability, speed, service. The making of the architectural plans is merely the first step, the construction is second; equipment, decorating and furnishing, other steps or processes. All are elements in the final unity. They must be considered together in the beginning, prior to the time of actual work.

Nothing concerning a contemplated building should be definitely decided until all things concerning it are ready for decision. To prevent excessive expenditure on one part, and inadequate expenditure on another, work should not be begun until all features are brought into proper relation.

BUILDERS' ACID.

Builders' acid, which is equal parts of muriatic acid and water, will remove spots of mortar on brick or stone work, but is not the right material for cleaning stone that is begrimed from smoke and dirt. To accomplish this, apply to the surface, with a long-handled fibre brush, strong solution of caustic soda or pearl ash. Let it remain on for about fifteen minutes, then wash several times with clear water, using a stiff brush or broom for the purpose. If this will not be effective enough, scrub the stone with a stiff fibre brush, using soft soap and concentrated lye and sand, allowing this to remain on the stone until nearly dry, then rinse with clear water, using a brush to remove the cleansing material.

Do you get "The Guide" regularly? You should. Better subscribe now, while you think of it, and keep in touch. The man who fails to get and to read carefully the trade paper of his chosen line, is missing a while lot of valuable data that should be at his command.

Advance Construction News

CONTEMPLATED CONSTRUCTION; ARCHITECTS AND OWNERS; COST LIMIT; LAST DAYS FOR FILING BIDS; FIRMS FIGURING: CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED; ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

Dunkelberger, 71 East Herman street, and Charles Johnson, 5701 Boyer street, Philadelphia.

REAL GOLD UNMINED.

"I am here as the self-appointed representative of 900 trade and technical publications printed in the United States and circulated wherever the English language is spoken. How important they are in their relation to advertising may be understood when I tell you that they carry, in the aggregate, advertising to the amount of at least \$25,000,000 a year—one-eighth of all the advertising money that is spent for all forms of publicity in the country—and that these advertisers "stick" year after year because it pays them to stick.

I have bought, sold and written all kinds of advertising—pasted and printed, indoor and outdoor, consumer and dealer, technical and commercial—and I have reached the conclusion that there is more real gold as yet unmined in the trade press field than in any other field of advertising endeavor."—Extract from address by R. R. Shuman, before the annual convention of the Associated Advertising Clubs at Omaha.

Gas is the Ideal Illuminant for Semi-Indirect Lighting

and when used in these new types of fixtures it excels all others in quality of light.

In quantity of light for a given cost no other illumination approaches modern gas light.

Let us co-operate with you in the selection of fixtures for your new houses.

Call up "Builders and Operators Division."
